DEPARTMENT OF FINANCE,

OTTAWA, January 2, 1931.

The Right Honourable R. B. BENNETT,
Minister of Finance.

SIR,—I have the honour to submit to you the Public Accounts of Canada for the fiscal year ended March 31, 1930.

ORDINARY RECEIPTS AND EXPENDITURES

The receipts for the year on account of Consolidated Fund amounted to \$441,411,806.18, and the expenditure on the same account to \$357,779,794.07, showing a surplus of ordinary receipts over ordinary expenditures of \$83,632,012.11.

SPECIAL RECEIPTS AND EXPENDITURES

In addition to the ordinary receipts and expenditures there were special receipts and credits of \$4,540,479.42 and special expenditures and charges of \$9,839,016.32, leaving an excess of \$5,298,536.90 of expenditures over receipts as a charge to Consolidated Fund:—

Special Receipts—

War and Demobilization Receipts— Refunds of Expenditures of Previous Years	\$ 35,293 78
Payments received on account of Reparations from Germany.....	4,325,274 30
Miscellaneous receipts and credits to Consolidated Fund	179,911 34
	<hr/> \$ 4,540,479 42

Special Expenditures—

Reparations—Claims for compensation..	6,700,000 00
Civil Service Superannuation Act, 1924 (Government contribution to the Fund).....	1,892,590 92
Miscellaneous charges to Consolidated Fund.....	1,246,425 40
	<hr/> 9,839,016 32

Excess of Special Expenditures over Special Receipts	<hr/> \$ 5,298,536 90 <hr/>
---	-----------------------------

DEPARTMENT OF FINANCE

CAPITAL EXPENDITURES

The following outlays were made during the year and charged to Capital:—

Canals (Schedule FF)	\$10,264,186 79
Railways (Schedule GG)	6,873,510 86
Public Works (Schedule HH)	8,589,022 02

Total Capital Expenditure	<u>\$25,726,719 67</u>
-------------------------------------	------------------------

The following transfers and refunds of Expenditures of Previous Years were credited to Capital Account:—

Canals (Schedule FF)	\$ 940,010 15
Railways (Schedule GG)	210,073 03
Public Works (Schedule HH)	2,015,492 48
	<u>\$ 3,165,575 66</u>

Net charge to Capital Account	<u>\$22,561,144 01</u>
---	------------------------

LOANS TO RAILWAYS

Loans to the Canadian National Railway Company to the amount of \$2,932,652.91 were made under authority of the Appropriation Act of 1929.

LOANS TO CANADIAN NATIONAL STEAMSHIPS

Loans to the Canadian Government Merchant Marine Limited of \$1,628,907.21 and the Canadian National (West Indies) Steamships Limited of \$862,389.98 making a total of \$2,491,297.19 were made under authority of the Appropriation Act of 1929.

DEBT

The net debt of the Dominion at the close of the fiscal year was \$2,177,763,958.71 or a decrease of \$47,740,746.39 under the net debt as it stood on March 31, 1929.

The decrease is accounted for as follows:—

REVENUES—

Ordinary Revenue	\$441,411,806 18
Special Receipts	4,540,479 42
	<u>\$445,952,285 60</u>

High Commissioner's Suspense	2,187 78
Unpaid Coupons—New York Loans Suspense	200 00
Railway Accounts—Amount trans- ferred from Railway Equip- ment Account	228,319 89
	<u>230,707 67</u>
	<u>\$446,182,993 27</u>

DEBT—*Concluded*

EXPENDITURES—

Ordinary Expenditure	\$357,779,794 07
Special Expenditure	9,839,016 32
Capital Expenditure (net)	22,561,144 01
Loans to Canadian National Railways	2,932,652 91
Loans to Canadian National Steamships Limited	2,491,297 19
Loans to Quebec Harbour Commissioners	2,821,000 00
Payment on account of Toronto Barracks site, which amount was previously set off against Military Property and Stores Account	1,250 65
Bonds, Interest, and Notes adjustment Account, written down as non-active	16,091 73
	<hr/> \$398,442,246 88

Net decrease of Debt \$ 47,740,746 39

FUNDED DEBT

The $4\frac{1}{2}$ per cent Refunding Loan issued February 1, 1926 amounting to \$20,000,000 matured February 1, 1930, also the balance outstanding of the $5\frac{1}{2}$ per cent New York Loan issued August 1, 1919 amounting to \$54,577,800 matured August 1, 1929, and both were redeemed.

SAVINGS BANK

At the close of the fiscal year, the balance at the credit of depositors in the Post Office Savings Bank was \$26,086,036.03, a decrease of \$2,289,733.71 under the balance held on March 31, 1929. The withdrawals for the year exceeded the deposits by \$3,074,315.60, while \$784,581.89 was added for interest accrued.

INVESTMENTS

SINKING FUNDS

Investments on account of Sinking Funds of the various loans were made during the year to the amount of \$4,011,574.52. The total of the investments at the credit of the Sinking Funds, which stood at \$52,079,198.30 on March 31, 1929 was therefore increased to \$56,090,772.82 on March 31, 1930.

ADVANCES TO HARBOUR COMMISSIONERS

Advances were made under statute to the following Harbour Commissioners:—

Chicoutimi Harbour Commissioners	\$ 815,000 00
Halifax Harbour Commissioners	1,272,000 00
Montreal Harbour Commissioners	4,336,000 00
Quebec Harbour Commissioners	2,821,000 00
St. John Harbour Commissioners	1,711,000 00
Three Rivers Harbour Commissioners	136,000 00
Vancouver Harbour Commissioners	345,000 00

\$ 11,436,000 00

During the year, \$3,000,000 of Montreal Harbour Commissioners' debentures held by the Dominion matured and \$1,000,000 of these debentures were paid.

CANADIAN FARM LOAN BOARD

During the year \$2,400,000.00 was advanced to the Board as Initial Capital; also Capital Stock of the Board was purchased to the amount of \$59,023.00.

LOANS TO BANKS

Under authority of the Finance Act R.S.C. 1927, advances during the year to an aggregate amount of \$660,250,000 were made by way of issues of Dominion Notes to various banks. On April 1, 1929 the outstanding balance on this account was \$83,500,000. During the year repayments were received to the amount of \$693,550,000 leaving a balance of \$50,200,000 outstanding at the close of the year.

SOLDIER AND GENERAL LAND SETTLEMENT

The loans outstanding to soldiers settling on the land and for General Land Settlement decreased during the year by \$4,776,571.47 of which \$3,637,172.69 was written off to Consolidated Fund on account of the revaluation of loans to soldier settlers. This leaves a balance outstanding at the close of the year of \$74,681,411.26 of which \$57,036,174.50 is carried as an Active Asset. The balance of \$17,645,236.76 is carried as a Non-Active Asset.

HOUSING LOANS

The Provincial Governments reduced their indebtedness to the Dominion on account of Housing Loans by \$1,754,500 as follows:—

Province of Manitoba.....	\$ 50,000 00
Province of New Brunswick.....	62,000 00
Province of Nova Scotia.....	135,000 00
Province of Quebec.....	1,507,500 00
	<hr/>
	\$1,754,500 00

This leaves a balance outstanding March 31, 1930 of \$11,311,202.72.

FOREIGN GOVERNMENTS

Foreign Governments have paid all interest due on their obligations. The Government of Greece, under agreement, paid \$215,000 on account of principal. The outstanding foreign debts are thus reduced to \$6,865,000 owing by Greece and \$23,969,720 owing by Roumania.

DOMINION NOTES

The circulation of Dominion Notes stood at \$174,326,618.30 on March 31, 1930, being a decrease of \$30,174,598.24 as compared with the circulation at the close of the last year. Gold held as security amounted to \$63,280,836.34. Of the total amount of Notes outstanding, \$50,200,000.00 were against approved securities held by the Department under the Finance Act.

GUARANTEED SECURITIES

CANADIAN NATIONAL RAILWAY COMPANY:—

An issue of \$60,000,000 Canadian National Railway Company 5% 40-Year Bonds dated July 1, 1929, was guaranteed as to principal and interest. The

bonds were sold to Dillon, Read & Company, New York, at 98.1597 and accrued interest. The proceeds were used, in part, to retire a bank loan of \$40,000,000 contracted in 1928. The issue was made under the following authority:

Appropriation Act, 1927, Vote 408.....	\$ 5,900,000 00
Appropriation Act, 1928, Vote 408.....	11,351,890 40
Canadian Northern Income Charge Act, 1928.	23,175,000 00
Appropriation Act, 1929, Vote 336.....	19,573,109 60
	<hr/>
	\$ 60,000,000 00

As of October 1st, 1929, guarantee was given to an issue of \$60,000,000 5% 40-Year Bonds of the Canadian National Railway Company. Chase Securities Corporation, New York, and associates purchased \$55,000,000 of the bonds at 96.53 and accrued interest, \$5,000,000 being reserved for employees' subscriptions. Of the latter amount, \$1,800,000 was subscribed at 98 and accrued interest and the balance, \$3,200,000, was sold in December, 1929, to Chase Securities Corporation at 99.17 and accrued interest. The issue was made under the following authority:

Appropriation Act, 1929, Vote 336.....	\$ 30,083,695 71
Branch Lines Construction, Special Acts:	
1927/30 program	1,900,000 00
1929/32 program.....	6,810,609 60
Toronto Terminals Railway Act.....	232,516 03
Canadian National Montreal Terminals Act..	7,300,000 00
Acquisition of Railways, Special Acts, 1929:	
Quebec, Montreal & Southern Railway....	6,198,645 41
Inverness Railway	387,415 34
Kent Northern Railway.....	61,986 45
Quebec Oriental Railway and the Atlantic,	
Quebec & Western Railway.....	3,615,876 49
Northern Alberta Railways.....	3,409,254 97
	<hr/>
	\$ 60,000,000 00

An issue of \$18,000,000 Canadian National Railway Company 5% 40-Year Bonds dated February 1, 1930, was guaranteed as to principal and interest. The issue was made under the Canadian National Refunding Act, 1929, to refund a like amount of the Company's 4½% Guaranteed Bonds due February 15, 1930, and was sold to Dillon, Read & Company, New York, at 98.086 and accrued interest.

CANADIAN NATIONAL (WEST INDIES) STEAMSHIPS, LIMITED:—

As of March 1st 1930, an issue of \$9,400,000 25-Year 5% Bonds of the Canadian National (West Indies) Steamships, Limited, was guaranteed as to principal and interest. The issue was sold to Dillon, Read & Company, New York, at 99.177 and accrued interest. The issue was made to repay temporary bank loans contracted during the period of construction of vessels for the West Indies service. The \$10,000,000 4¼% temporary bonds guaranteed in 1928 as security for such loans were redeemed and cancelled.

HARBOUR COMMISSIONERS OF MONTREAL:—

Under authority of Chap. 58 of the Statutes of 1924, an issue of \$19,500,000 5% 40-Year Bonds of the Harbour Commissioners of Montreal, dated November 1, 1929, was guaranteed as to principal and interest. Of the authorized amount, \$18,500,000 were sold to Wood, Gundy & Company, Limited, at 98 and accrued interest. The issue was made to repay temporary bank loans and provide for the balance of the construction cost of the Montreal-South Shore Bridge. The \$17,000,000 Interim Debentures issued and guaranteed in connection with the temporary financing, were redeemed and cancelled.

Respectfully submitted,

WATSON SELLAR,
Assistant Deputy Minister of Finance.

Balance Net Debt March 31, 1930, brought forward.....2,177,763,958 71

We have examined the attached Balance Sheet of The Dominion of Canada of March 31, 1930, and have obtained all the information and explanations required by us.

We certify that in our opinion, the said Balance Sheet, with accompanying Schedules A to T and V, is properly drawn up so as to exhibit a true and correct view of the financial position of the Dominion of Canada at March 31, 1930, according to the information and explanations received by us and as shown by the Books of Account of the Dominion.

P. S. ROSS AND SONS,
Chartered Accountants

2,177,763,958 71

NOTE.—Indirect Liabilities—

Guarantees given by the Dominion of Canada are listed in Schedule V.

REPORT
OF THE
DEPARTMENT OF
NATIONAL REVENUE

CONTAINING
ACCOUNTS OF REVENUE

With Statements relative to the Imports, Exports, Excise
and Income

OF THE
DOMINION OF CANADA

FOR THE FISCAL YEAR ENDED MARCH 31

1930

COMPILED FROM OFFICIAL RETURNS

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1930

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I., G.C.M.G.,
etc., etc., Governor General and Commander in Chief of the Dominion of
Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

The undersigned has the honour to present to Your Excellency the Annual Report of the Department of National Revenue containing Tables and Statements relative to the Imports, Exports, Excise and Income of the Dominion of Canada, for the fiscal year ended March 31, 1930, as compiled from official returns.

All of which is respectfully submitted.

E. B. RYCKMAN,
Minister of National Revenue.

OTTAWA, October 30, 1930.

Hon. E. B. RYCKMAN, P.C., K.C., M.P.,
Minister of National Revenue.

SIR,—I have the honour to hand you the Annual Report of the Department of National Revenue (Customs Division), containing Accounts of Revenue with statements of Imports and Exports of the Dominion of Canada for the fiscal year ended March 31, 1930.

Your obedient servant,

R. W. BREADNER,
Commissioner of Customs.

OTTAWA, October 25, 1930.

PREFACE

The Customs Act contains the following provisions respecting the Annual Report of the Department of Customs:—

“305. The Minister shall annually make to the Governor General, to be laid before Parliament within fifteen days after the meeting thereof, a report and statement of the transactions and affairs of the department during the year then next preceding.”

The Inland Revenue Act also contains provisions respecting the Annual Report of the Inland Revenue Service as follows:—

“14. The Minister shall annually make to the Governor General a report and statement of the transactions and affairs of the Department during the year then next preceding, which shall be laid before Parliament within fifteen days after the next meeting thereof.”

The unrevised monthly statements of imports and exports, prepared and published under the direction of the Department of Customs from July 1, 1900, ceased to be published by this Department since March, 1918.

Detailed statements, however, showing the quantity, value, and origin of imports and the quantity, value, and destination of exports, continue to be prepared and furnished monthly by the Department of Customs from April 1, 1918, for publication by the Dominion Bureau of Statistics.

Trade statistics classified by countries, with other details, compiled from Customs returns, are now published by the Dominion Bureau of Statistics.

Part I of this report contains tables and statements relative to the Customs.

Part II of this report contains tables and statements relative to Excise.

Part III of this report contains tables relative to Income Taxes.

The difference between revenue totals in Statement Number 9, Part I and totals shown in other statements of revenue, represent the differences between actual cash received in the Department and remitted to the Receiver General, and totals shown on entries passed, and are adjusted in the next fiscal year.

PART I

REPORT

OF THE

COMMISSIONER OF EXCISE

To the Hon. E. B. RYCKMAN,
Minister of National Revenue.

SIR,—Herewith I have the honour to submit statements of the Excise Revenues collected by this department during the fiscal year ended March 31, 1930, with statistics respecting the sources whence these revenues were derived. The following summary comparison shows the accrued revenues for the fiscal years ended March 31, 1926, 1927, 1928, 1929 and 1930.

	1926	1927	1928	1929	1930
	\$	\$	\$	\$	\$
Excise Duty.....	43,370,231	49,139,913	58,062,123	64,362,328	65,668,848
Excise Tax.....	99,228,334	106,723,328	91,662,086	84,014,166	64,153,596
Totals.....	142,598,565	155,863,241	149,724,209	148,376,494	129,822,444

DETAILS of Excise Revenue accrued during the undermentioned fiscal years:

	1926	1927	1928	1929	1930
	\$	\$	\$	\$	\$
Spirits.....	10,932,578	13,904,584	18,267,537	19,344,599	18,534,658
Malt-Liquor.....	113,933	223,833	239,245	351,440	347,648
Malt.....	3,840,774	3,811,557	4,277,066	4,756,945	4,495,651
Tobacco.....	27,919,051	30,638,418	34,702,359	39,307,618	41,671,417
Cigars.....	539,300	536,845	549,896	576,883	593,052
Acetic acid.....	100	150	150	150	150
Manufacturers in bond.....	17,250	17,350	17,700	17,020	17,950
Other receipts.....	7,245	7,176	8,170	7,673	8,322
Totals.....	43,370,231	49,139,913	58,062,123	64,362,328	65,668,848

The quantity of spirits produced during the fiscal year was 16,813,433 proof gallons, as compared with 16,816,312 proof gallons produced in the previous fiscal year. The raw materials taken for use in the production of spirits, during the fiscal year were as follows:—

	Lb.
Malt.....	42,064,219
Indian corn.....	114,942,991
Rye.....	78,075,195
Oats.....	257,510
Rice.....	58,330
Molasses.....	61,036,607

The transactions of the several distilleries will be found in Statement No. 7.

There was, on April 1, 1929, in process of manufacture.....	Proof gal. 1,040,833
Manufactured during the fiscal year.....	16,813,433
Returned to distilleries for redistillation—In bond.....	1,985,908
Received into distilleries from other sources—Duty paid.....	327,273
Total.....	20,167,447

This was disposed off as follows:—

Placed in warehouse.....	Proof gal. 19,269,025
Fusel oil and spirits written off.....	21,156
Deficiency arising from rectification.....	312
Remaining in process of manufacture, March 31, 1930, by actual stock taking.....	876,954
Total.....	20,167,447

Spirits.—The following statement shows the warehousing transactions in Spirits during the fiscal year ended March 31, 1930, and the four preceding fiscal years:—

Fiscal Years	In Warehouse at beginning of year including transits	Warehoused during the year Ex-distillery	Other-wise warehoused	Entered for consumption	Exported	Used in bonded factories	Other-wise accounted for	For redistillation	In Warehouse at end of year, including transits

Hon. E. B. RYCKMAN, P.C., K.C., M.P.,
Minister of National Revenue.

SIR,—I have the honour to hand you the Annual Shipping Report of the Department of National Revenue (Customs Division), containing statements of Navigation and Shipping of the Dominion of Canada for the fiscal year ended March 31, 1930, as compiled from official returns.

I have the honour to be, sir,

Your obedient servant,

R. W. BREADNER,
Commissioner of Customs.

OTTAWA, October 28, 1930.

Hon. E. B. RYCKMAN, P.C., K.C., M.P.,
Ministre du Revenu national.

MONSIEUR,—J'ai l'honneur de vous soumettre le rapport annuel de la Navigation du ministère du Revenu national (Service des Douanes), comprenant les tableaux de la navigation intérieure et maritime du Dominion du Canada pour l'exercice se terminant le 31 mars 1930, tel que compilé des rapports officiels.

J'ai l'honneur d'être monsieur,

Votre tout dévoué,

R. W. BREADNER,
Commissaire des Douanes.

OTTAWA, le 28 octobre 1930.

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I., G.C.M.G.,
etc., etc., Governor General and Commander in Chief of the Dominion of
Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

The undersigned has the honour to present to Your Excellency the Annual Report of the Department of National Revenue containing Statements of Navigation and Shipping of the Dominion of Canada for the fiscal year ended March 31, 1930, as compiled from official returns.

All of which is respectfully submitted.

E. B. RYCKMAN,
Minister of National Revenue.

OTTAWA, October 30, 1930.

*A Son Excellence le Très Honourable Vicomte Willingdon, G.C.S.I., G.C.M.G.,
etc , etc., Gouverneur général et Commandant en chef du Dominion du Canada.*

QU'IL PLAISE A VOTRE EXCELLENCE:

Le soussigné a l'honneur de présenter à Votre Excellence le rapport annuel du ministère du Revenu National, comprenant les tableaux de la navigation et du commerce du Dominion du Canada pour l'exercice se terminant le 31 mars 1930 tel que compilé des rapports officiels.

Le tout respectueusement soumis.

E. B. RYCKMAN,
Ministre du Revenu National.

OTTAWA, le 30 octobre 1930.

OTTAWA, CANADA

MINISTER
Hon. JAMES MALCOLM

DEPUTY MINISTER
F. C. T. O'HARA

THIRTY-EIGHTH ANNUAL REPORT

OF THE

DEPARTMENT OF TRADE AND
COMMERCE

FOR THE

FISCAL YEAR ENDING MARCH 31, 1930

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1930

Applications for copies of this publication should be addressed to the King's Printer, Ottawa

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I.,
G.C.M.G., G.C.I.E., G.B.E., Governor General and Commander in Chief
of the Dominion of Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

The undersigned has the honour to present to Your Excellency the Report of the Department of Trade and Commerce for the fiscal year ended March 31, 1930.

All of which is respectfully submitted.

JAMES MALCOLM,
Minister of Trade and Commerce.

DEPARTMENT OF TRADE AND COMMERCE,
OTTAWA.

REPORT OF THE DEPUTY MINISTER

The Hon. JAMES MALCOLM, M.P.,
Minister of Trade and Commerce,
Ottawa.

OTTAWA, June 25, 1930.

SIR,—I have the honour to present herewith the Thirty-eighth Annual Report of the Department of Trade and Commerce, that is to say, for the fiscal year ended March 31, 1930.

Canada's Foreign Trade, 1929-30

In international trade, for the latest comparative year for worldwide statistics available, viz., the calendar year 1929, Canada, in face of a slight decline in imports and a very serious drop in exports, accounted for by a falling off in exports of grains, especially wheat, to Europe and the Orient, partly due to (1) lower yields and (2) restricted marketing policy, has maintained her relative position among the leading commercial countries of the world. In 1929 as in 1928 Canada occupied fifth position in imports, exports and aggregate trade, being exceeded as in 1928 by the United States, the United Kingdom, Germany and France. During the calendar year 1929 the relative position of the ten leading trading countries of the world was as under—

	Net Imports	Domestic Exports	Total Trade
	\$	\$	\$
1. United States.....	4,316,272,000	5,157,409,000	9,473,681,000
2. United Kingdom.....	5,410,998,000	3,550,501,000	8,961,499,000
3. Germany.....	3,197,432,000	3,208,754,000	6,406,186,000
4. France.....	2,296,414,000	1,972,851,000	4,269,265,000
5. Canada.....	1,273,037,000	1,182,412,000	2,455,479,000
6. British India.....	944,796,000	1,182,098,000	2,126,894,000
7. Japan.....	1,008,580,000	978,440,000	1,987,020,000
8. Netherlands.....	1,113,856,000	805,147,000	1,919,002,000
9. Italy.....	1,120,381,000	783,153,000	1,903,534,000
10. Belgium.....	993,110,000	902,028,000	1,895,138,000

Canada holds an enviable position among the leading nations of the world in the production and exportation of many staple products. In production of printing paper, nickel, asbestos and cobalt, she leads the world, occupies second position in the production of automobiles, in output of lead and gold she occupies third place and fifth position in the production of wheat, being exceeded by the United States, Russia, France and British India; while in exports she leads the world in exports of printing paper, nickel and asbestos, occupies second place in exports of automobiles, wheat and wheat flour and fourth place in exports of wood pulp, as well as occupying a very high place in the exports of many staple products as, lumber and timber, fish, copper, barley, cheese, raw furs, whiskey, meats, rubber tires, farm implements, pulpwood, cattle, raw gold, silver, lead, rye, oats, rubber footwear, leather, hides, aluminium, zinc, machinery,

fertilizers, milk and cream, fresh condensed milk, malt liquors, bran and shorts, fruits, coal, sugar, cereal foods, iron and steel products, vegetables, paper products and milled products.

ANALYSIS OF CANADA'S TRADE

Canada's total foreign trade during the year ended March 31, 1930, amounted to \$2,393,212,000, compared with a similar trade in 1929 valued at \$2,654,575,000 and in 1928 at \$2,359,555,000; showing a decrease compared with the year 1929 of \$261,363,000, or 9·8 per cent, but compared with the year 1928 an increase of \$33,657,000, or 1·4 per cent. Imports as well as exports show a decrease compared with the year 1929, the decrease in imports amounting to \$17,406,000, or 1·4 per cent, and in exports to \$243,958,000, or 17·6 per cent. During 1930 imports amounted to \$1,248,274,000 compared with an import trade in 1929 valued at \$1,265,679,000, and in 1928 at \$1,108,956,000; the decrease in imports in 1930 compared with 1929 amounting to \$17,406,000, or 1·4 per cent, but compared with 1928 an increase of \$139,317,000, or 12·5 per cent; while the exports (domestic and foreign combined) during the year 1930 were valued at \$1,144,938,000, compared with a similar trade in 1929 valued at \$1,388,896,000 and in 1928 at \$1,250,598,000; the decrease in 1930 compared with 1929 amounting to \$243,958,000, or 17·6 per cent, and compared with 1928 to \$105,660,000, or 8·4 per cent. Canada's domestic exports in 1930 amounted to \$1,120,258,000, in 1929 to \$1,363,709,000, and in 1928 to \$1,228,349,000; the decrease in 1930 compared with 1929 amounting to \$243,451,000, or 17·8 per cent, and compared with 1928 to \$108,091,000, or 8·8 per cent.

The decrease in the exports was mainly accounted for by the falling off in the export of grains, particularly wheat, to the United Kingdom and continental Europe, due partly to lower yields, but also reflecting temporary marketing policies as well. If the exports of barley, flaxseed, oats, rye, wheat and wheat flour are eliminated from the Dominion's domestic exports for 1929 and 1930, it will be noted that the exports of "all other commodities" show an increase for the year 1930 over 1929 of \$23,892,074. The particulars are set forth in the following table:—

CANADA'S DOMESTIC EXPORTS, LESS EXPORTS OF BARLEY, FLAXSEED, OATS, RYE, WHEAT AND WHEAT FLOUR

	1929	1930	Increase (+) Decrease (-)
	\$	\$	\$
Barley.....	25,743,971	10,388,735	(-) 15,355,236
Flaxseed.....	5,745,397	1,732,087	(-) 4,013,310
Oats.....	10,241,938	4,055,855	(-) 6,186,083
Rye.....	10,809,020	1,451,640	(-) 9,357,380
Wheat.....	428,524,326	215,753,475	(-) 212,770,851
Wheat flour.....	65,117,779	45,457,195	(-) 19,660,584
Total above 6 commodities.....	546,182,431	278,838,987	(-) 267,343,444
Total domestic exports.....	1,363,709,672	1,120,258,302	(-) 243,451,370
Total exports of "all other commodities".....	817,527,241	841,419,315	(+) 23,892,074

The statistics in the following table indicate the trend of Canadian trade from 1914 to 1930, (a) with All Countries; (b) with the United Kingdom; and (c) with the United States.

SUMMARY OF TREND OF CANADIAN TRADE, 1914 TO 1930

(Values in Millions of Dollars)

Years ended March 31	Imports into Canada				Exports from Canada			Excess of Imports (i) Exports (e)	Percentage relation of Exports to Imports

CANADA'S TRADE BY COUNTRIES, 1929-30

The imports from foreign countries during the fiscal year 1930 were valued at \$995,570,000, and from the British Empire at \$252,704,000; the decrease in 1930 compared with 1929, in the case of foreign countries being \$12,690,000, and of the British Empire \$4,715,000; while the exports of Canadian produce to foreign countries amounted to \$740,516,000, and to the British Empire to \$379,742,000, the exports to foreign countries showing a decrease of \$87,067,000, and to the British Empire a decrease of \$156,385,000. An analysis of Canada's exports by countries demonstrates that the decrease occurred chiefly in the exports to those countries that purchase large quantities of grain, especially wheat, from Canada. From 1929 to 1930 imports from foreign countries, except the United States, increased \$7,872,000, and from the British Empire, except the United Kingdom, \$148,000, whereas the exports to foreign countries, except the United States, from 1929 to 1930, decreased \$102,413,000, while the exports to the British Empire, except the United Kingdom, during the same period decreased only \$8,493,000. The trade of Canada with the United States in 1930 amounted to \$1,362,408,000, or 57 per cent of Canada's total trade with the world. In 1930 imports from the United States were valued at \$847,450,000, and domestic exports at \$514,958,000, imports showing a decrease of \$20,562,000, and exports an increase of \$15,346,000. The United States, since the year 1882, has supplied Canada with the largest amount of her total imports, the proportion for the year 1930 amounting to 67.9 per cent, while in exports she has recently moved into first position in Canada's export trade, taking during the year 1930, 45.9 per cent of her total exports. The trade of Canada with the United Kingdom comes next in order of importance. Imports from the United Kingdom in 1930 amounted to \$189,178,000, and domestic exports to \$281,838,000, the decrease in imports amounting to \$4,863,000 compared with 1929, and in exports to \$147,892,000. The decrease in exports to the United Kingdom occurred chiefly in exports of grains and dairy products, the decrease in wheat amounting to \$120,210,000; barley, \$9,992,000; cheese, \$6,414,000; rye, \$5,082,000; and oats \$2,590,000. Imports from Australia, Belgium, British South Africa, Germany, Italy and the Netherlands, show increases, while exports to these countries show decreases, the decrease in exports being mainly due to falling off in grain exports, chiefly wheat. Imports in order of importance were: Germany, \$21,505,000, increase \$707,000; Belgium, \$13,019,000, increase \$1,004,000; the Netherlands, \$9,431,000, increase \$414,000; Italy, \$4,964,000, increase \$704,000; Australia, \$4,211,000, increase \$726,000; and British South Africa, \$824,000, increase \$544,000; while the exports to these identical countries in order of importance were: Germany, \$25,344,000, decrease \$21,365,000; Belgium, \$21,093,000; decrease \$5,608,000; Australia, \$16,323,000, decrease \$3,147,000; the Netherlands, \$15,945,000, decrease \$28,422,000; Italy, \$11,387,000, decrease \$11,638,000; and British South Africa, \$10,918,000, decrease \$1,314,000. The trade of Canada with the following countries shows decreases in both imports and exports, viz.: Imports—British India, \$9,033,000, decrease \$1,334,000; China, \$2,973,000, decrease \$122,000; and Japan, \$12,537,000, decrease \$384,000; Exports—British India, \$9,116,000, decrease \$2,742,000; China, \$16,528,000, decrease \$7,715,000; and Japan, \$30,476,000, decrease \$11,624,000. Of the other more important trading countries, imports from France show a decrease in imports but increases in exports, while the trade with Argentina and New Zealand show substantial increase in both imports and exports.

For further information as to the trade with other principal countries, see the following table.

CANADA'S TRADE WITH PRINCIPAL COUNTRIES, 1929-30

ANALYSIS OF CANADA'S COMMODITY IMPORTS, 1929-30

The decrease in the imports, 1930, compared with 1929, amounting to \$17,-406,000, occurred in four of the nine main groups. The decrease in these main groups of Agricultural and Vegetable Products, Animals and Animal Products, Fibres, Textiles and Textile Products and Iron and Its Products amounted to \$58,824,000, while the increase in the main groups of Wood, Wood Products and Paper, Non-Ferrous Metals and Their Products, Non-Metallic Minerals and Their Products, Chemicals and Allied Products, and Miscellaneous Commodities, totalled \$41,418,000. The imports, arranged in order of importance, with increase or decrease, 1930 compared with 1929, were: (1) Iron and Its Products, \$316,-879,000, decrease \$29,737,000; (2) Agricultural and Vegetable Products, \$227,-049,000, decrease \$6,081,000; (3) Non-Metallic Minerals and Their Products,

\$186,496,000, increase \$19,532,000; (4) Fibres, Textiles and Textile Products, \$185,241,000, decrease \$21,198,000 (5) Non-Ferrous Metals and Their Products, \$87,950,000, increase \$12,512,000; (6) Miscellaneous Commodities, \$73,946,000, increase \$5,454,000; (7) Animals and Animal Products, \$69,854,000, decrease \$1,808,000; (8) Wood, Wood Products and Paper, \$60,951,000, increase \$1,736,000; and (9) Chemicals and Allied Products, \$39,908,000, increase \$2,184,000.

The principal imports under the Agricultural and Vegetable Products group (valued at \$227,049,000), with increase or decrease, 1930 compared with 1929, were: Alcoholic beverages, \$45,026,000, decrease \$3,818,000; fresh fruits, \$23,779,000, decrease \$2,137,000; sugar for refining, \$22,925,000, decrease \$3,481,000; crude rubber, \$14,711,000, decrease \$2,699,000; corn, \$14,149,000, increase \$357,000; vegetable oil, \$12,244,000, increase \$1,435,000; tea, \$10,695,000, decrease \$1,058,000; fresh vegetables, \$8,274,000, increase \$1,336,000; raw tobacco, \$6,472,000, decrease \$295,000; raw coffee, \$5,925,000, increase \$68,000; dried fruits, \$5,809,000, decrease \$190,000; nuts, \$5,095,000, decrease \$80,000; prepared fruits, \$4,227,000, increase \$476,000; cocoa and chocolate, \$3,651,000, decrease \$151,000; and gums and resins, \$3,432,000, increase \$83,000. Under the Animals and Animal Products group (valued at \$69,854,000) the chief imports, with increase or decrease, 1930 as compared with 1929, were: Butter, \$14,472,000, increase \$5,443,000; furs, \$11,954,000, decrease \$5,212,000; raw hides, \$8,402,000, decrease \$4,027,000; meats, \$7,599,000, increase \$1,694,000; unmanufactured leather, 5,920,000, decrease \$90,000; manufactured leather, \$5,618,000, increase \$629,000; fish, \$3,475,000, increase \$23,000; animals, living, \$2,803,000, decrease \$302,000; and grease for soap, \$1,251,000, increase \$199,000. The main imports under the Fibres, Textiles and Textile Products group (valued at \$185,241,000), with increase or decrease, 1930 compared with 1929, were: woollen goods, \$29,388,000, decrease \$4,387,000; cotton goods, \$28,555,000, decrease \$2,343,000; raw cotton, \$21,682,000, decrease \$6,522,000; flax, hemp and jute, \$14,717,000, decrease \$1,027,000; silk fabrics, \$11,112,000, decrease \$3,425,000; raw silk, \$8,361,000, increase \$1,813,000; woollen yarn, \$5,870,000, increase \$137,000; silk clothing, \$5,074,000, increase \$38,000; raw wool, \$4,307,000, decrease \$1,484,000; noils and tops, \$3,834,000, decrease \$1,989,000; cotton yarn, \$3,828,000, decrease \$364,000; manila and sisal grass, \$3,823,000, decrease \$1,944,000; wool carpets, \$3,245,000, decrease \$62,000; hats and caps, \$2,908,000, decrease \$321,000; and binder twine, \$1,845,000, decrease \$1,067,000.

Under the main group of Wood, Wood Products and Paper (valued at \$60,951,000) the principal imports, with increase or decrease, 1930 compared with 1929, were: Books and printed matter, \$18,131,000, increase \$1,591,000; unmanufactured wood, \$15,348,000, decrease \$1,291,000; paper, \$14,764,000, increase \$1,115,000; and manufactured wood, \$12,708,000, increase \$321,000. The chief imports under the Iron and Its Products group (valued at \$316,879,000), with increase or decrease, 1930 compared with 1929, were: Machinery, \$69,118,000, increase \$8,855,000; rolling mill products, \$61,894,000, increase \$1,720,000; automobile parts, \$35,747,000, decrease \$20,014,000; automobiles, \$34,465,000, decrease \$10,217,000; farm implements, \$30,075,000, decrease \$10,217,000; engines and boilers, \$15,146,000, decrease \$4,161,000; tubes and pipes, \$5,948,000, increase \$1,251,000; iron ore, \$5,021,000, increase \$630,000; hardware and cutlery, \$4,952,000, increase \$177,000; wire, \$3,659,000, decrease \$147,000; tools, \$3,192,000, decrease \$3,000; and pigs and ingots, \$2,717,000, decrease \$426,000. Under the main group of Non-Ferrous Metals and Their Products (value \$87,950,000) the principal imports with increase or decrease, 1930 compared with 1929, were: Electric apparatus, \$37,611,000, increase \$10,836,000; copper, \$14,899,000 increase

\$1,831,000; brass, \$7,000,000, increase \$245,000; aluminium \$6,059,000, decrease \$311,000; clocks and watches, \$3,496,000, decrease \$80,000; and tin in ingots, \$2,488,000, decrease \$499,000.

The imports under the Non-Metallic Minerals and Their Products group (valued at \$186,496,000), with increase or decrease, 1930 compared with 1929, were: Coal, \$56,812,000, increase \$1,152,000; crude petroleum, \$50,951,000, increase \$13,291,000; refined petroleum, \$25,180,000, increase \$1,508,000; clay and products, \$12,254,000, increase \$1,837,000; glass, \$10,454,000, increase \$736,000; stone and its products, \$8,703,000, increase \$165,000; coke, \$6,403,000, decrease \$243,000; and diamonds, unset, \$3,194,000, increase \$12,000. Under the Chemicals and Allied Products group (value \$39,903,000) the chief imports, with increase or decrease, 1930 compared with 1929, were: Paints and varnishes, \$5,959,000, increase \$104,000; fertilizers, \$5,034,000, increase \$186,000; soda and compounds, \$4,411,000, increase \$745,000; drugs and medicines, \$3,809,000, increase \$82,000; dyeing and tanning materials, \$3,547,000, decrease \$435,000; and soap, \$1,316,000, increase \$154,000. The imports under the Miscellaneous Commodities group (valued at \$73,946,000), with increase or decrease, 1930 compared with 1929, were: Settlers' effects, \$11,181,000, increase \$790,000; containers (outside coverings), \$6,286,000, increase \$806,000; scientific equipment, \$4,957,000, increase \$498,000; post office parcels, \$3,778,000, increase \$140,000; articles for exhibition, \$3,491,000, increase \$195,000; musical instruments, \$3,131,000, increase \$305,000; jewellery, \$2,436,000, decrease \$169,000; toys, \$2,365,000, increase \$114,000; express parcels, \$2,123,000, increase \$138,000; films, \$1,605,000, increase \$737,000; vessels, \$1,372,000, increase, \$316,000; and pocket books, etc., \$1,344,000, increase \$55,000.

For further information respecting Canada's imports in principal commodities, with proportions received from the United Kingdom and the United States, see the following table:—

CANADA'S IMPORTS BY MAIN GROUPS, 1929-30

NOTE:—Values in Thousands of Dollars.

Main Groups	Total Imports 1929-30	Imports from		Increase (+) or Decrease (—) 1929-30 compared with 1928-29

CANADA'S IMPORTS FOR CANADIAN INDUSTRIES, 1929-30

It will be observed from the statistics in the following table giving "Imports of Sixty-two Leading Commodities for Canadian Industries, 1929-30" that the total value of these commodities amounted to \$351,016,000, the United Kingdom supplying \$24,986,000 of this amount, and the United States \$256,226,000. The decrease in the imports from all countries, 1930 compared with 1929, amounted to \$40,885,000; from the United Kingdom to \$2,717,000, and from the United States to \$33,138,000. According to degree of manufacture, raw materials amounted to \$178,195,000 of the total value of the commodities listed as for Canadian industries; semi-manufactured products to \$77,743,000; and fully or chiefly manufactured products to \$95,078,000. The proportion of the commodities imported from all countries, the United Kingdom and the United States, according to degree of manufacture, with increase or decrease, 1930 compared with 1929, was: Raw materials,—All countries \$178,195,000, decrease \$6,905,000; United Kingdom, \$4,351,000, decrease \$1,008,000; and United States, \$142,887,000, decrease \$6,658,000; Semi-manufactured products,—All countries, \$77,743,000, decrease \$4,571,000; United Kingdom, \$7,830,000, decrease \$1,181,000; and United States, \$42,417,000, increase \$688,000; Fully or chiefly manufactured products,—All countries, \$95,978,000, decrease \$29,409,000; United Kingdom, \$12,805,000, decrease \$528,000; and United States, \$70,922,000, decrease \$27,168,000.

For further information respecting imports of commodities for Canadian industries, with proportions received from the United Kingdom and the United States, see the following table:—

IMPORTS OF SIXTY-TWO LEADING COMMODITIES FOR CANADIAN INDUSTRIES,
1929-30

NOTE:—Commodities arranged in order of importance. Values in Thousands of Dollars.

Main Groups	Total Imports 1929-30	Imports from		Increase (+) or Decrease (−) 1929-30 compared with 1928-29

ANALYSIS OF CANADA'S COMMODITY EXPORTS, 1929-30

The decrease in the domestic exports, 1930 compared with 1929, amounting to \$243,451,000, as in the imports, occurred in four of the nine main groups, the groups also being the same. The decrease in the four main groups to show declines, viz.: Agricultural and Vegetable Products, Animals and Animal Products, Fibres, Textiles and Textile Products and Iron and Its Products, amounted to \$291,905,000, while the increase in the five main groups to show increases, viz.: Wood, Wood Products and Paper, Non-Ferrous Metals and Their Products, Non-Metallic Minerals and Their Products, Chemicals and Allied Products and Miscellaneous Commodities, totalled \$48,454,000. The domestic exports, arranged in order of importance, with increase or decrease, 1930 compared with 1929, were: (1) Agricultural and Vegetable Products, \$384,636,000, decrease \$261,878,000; (2) Wood, Wood Products and Paper, \$289,567,000, increase \$945,000; (3) Non-Ferrous Metals and Their Products, \$154,319,000, increase \$41,541,000; (4) Animals and Animal Products, \$133,009,000, decrease \$25,748,000; (5) Iron and Its Products, \$78,590,000, decrease \$3,667,000; (6) Non-Metallic Minerals and Their Products, \$28,545,000, increase \$1,143,000; (7) Chemicals and Allied Products, \$22,468,000, increase \$3,030,000; (8) Miscellaneous Commodities, \$20,058,000, increase \$1,794,000; and (9) Fibres, Textiles and Textile Products, \$9,066,000, decrease \$612,000.

The principal exports under the Agricultural and Vegetable Products group (value \$384,636,000), with increase or decrease, 1930 compared with 1929, were: wheat, \$215,753,000, decrease \$212,770,000; wheat flour, \$45,457,000, decrease \$19,661,000; whiskey, \$25,856,000, increase \$1,733,000; rubber tires \$18,040,000, decrease \$1,080,000; barley, \$10,389,000, decrease \$15,355,000; rubber footwear, \$9,986,000, increase \$1,397,000; apples, fresh, \$8,112,000, increase \$3,245,000; potatoes, \$8,042,000, increase \$4,959,000; oats, \$4,056,000, decrease \$6,186,000; seeds, \$3,238,000, decrease \$4,707,000; bran and shorts, \$2,582,000, decrease \$2,914,000; oatmeal and rolled oats, \$2,441,000, decrease \$632,000; ale and beer, \$1,996,000, decrease \$3,612,000; rye, \$1,452,000, decrease \$9,357,000; and refined sugar, \$1,424,000, decrease \$752,000. Under the Animals and Animal Products group (valued at \$133,009,000) the chief exports, with increase or decrease, 1930 compared with 1929, were: Fish, \$34,768,000, decrease \$214,000; raw furs, \$18,706,000, decrease \$5,544,000; cheese, \$18,278,000, decrease \$6,904,000; animals, living, \$15,771,000, decrease \$1,263,000; meats, \$15,031,000, decrease \$1,154,000; raw hides, \$7,731,000, decrease \$1,749,000; unmanufactured leather,

\$6,497,000, decrease \$3,095,000; milk and cream, fresh, \$5,379,000, decrease \$1,749,000; and milk, condensed, \$3,262,000, decrease \$459,000. The main exports under the Fibres, Textile and Textile Products group (value \$9,066,000), with increase or decrease, 1930 compared with 1929, were: Rags, \$1,632,000, decrease \$169,000; raw wool, \$1,576,000, decrease \$1,221,000; binder twine, \$1,502,000, increase \$185,000; cottons, \$843,000, increase \$141,000; socks and stockings, \$826,000, increase \$362,000; felt manufactures, \$654,000, increase \$92,000; woollen goods, \$449,000, decrease \$10,000; artificial silk, \$229,000, decrease \$16,000; and gloves and mitts, \$216,000, decrease \$10,000..

Under the main group of Wood, Wood Products and Paper (valued at \$289,567,000) the principal exports, with increase or decrease, 1930 compared with 1929, were: Newsprint paper, \$145,401,000, increase \$3,058,000; planks and boards, \$49,447,000, increase \$1,783,000; wood pulp, \$44,914,000, increase \$18,000; pulpwood, \$13,860,000, decrease \$327,000; shingles, \$6,704,000, decrease \$1,089,000; timber, square, \$4,235,000; increase, \$381,000; logs, \$3,678,000, decrease \$971,000; and laths, \$3,095,000, decrease \$2,929,000. The chief exports under the main group of Iron and Its Products (valued at \$78,590,000), with increase or decrease, 1930 compared with 1929, were: Automobiles, \$35,308,000, decrease \$7,752,000; farm implements, \$18,397,000, increase \$2,526,000; machinery, \$7,155,000, decrease \$182,000; pigs and ingots \$4,727,000, increase \$843,000; automobile parts, \$2,299,000, decrease \$84,000; pipe and tubing, \$2,203,000, decrease \$20,000; and hardware and cutlery, \$1,743,000, decrease \$227,000. Under the Non-Ferrous Metals and Their Products group (valued at \$154,319,000) the chief exports, with increase or decrease, 1930 compared with 1929, were: Raw gold, \$34,375,000, increase \$21,979,000; copper blister, \$28,966,000, increase \$9,998,000; nickel, \$25,035,000; increase \$1,155,000; aluminium, \$16,422,000, increase \$6,778,000; silver, \$11,570,000, decrease \$393,000; lead, \$10,638,000, decrease \$492,000; copper ore, \$8,770,000, increase \$833,000; and zinc, \$8,367,000, increase \$60,000.

The chief exports under the main group of Non-Metallic Minerals and Their Products (valued at \$28,545,000), with increase or decrease, 1930 compared with 1929, were: Raw asbestos, \$12,074,000, increase \$807,000; stone and its products, \$6,904,000, increase \$366,000; coal, \$3,999,000, decrease \$525,000; crude petroleum, \$1,281,000, decrease \$27,000; and gasoline and naphtha, \$950,000, increase \$226,000. Under the main group of Chemicals and Allied Products (valued at \$22,468,000), the principal exports, with increase or decrease, 1930 compared with 1929, were: Fertilizers, \$7,990,000, increase \$1,912,000; acids, \$5,097,000, increase \$856,000; soda and compounds, \$4,209,000; increase \$289,000; drugs and medicines, \$780,000, increase \$119,000; and paints and varnishes, \$503,000, decrease \$26,000. The principal exports under the main group of Miscellaneous Commodities (valued at \$20,058,000), with increase or decrease, 1930 compared with 1929, were: Settlers' effects, \$6,304,000, increase \$387,000; films, \$4,790,000, increase \$525,000; electrical energy, \$4,028,000, increase \$90,000; vessels, \$901,000, increase \$692,000; musical instruments, \$646,000, decrease \$122,000; containers (empty packages), \$616,000, increase \$44,000; and stationery, \$602,000, increase \$141,000.

For further information respecting Canada's exports in principal commodities, with proportions sent to the United Kingdom and the United States, see the following table:—

REPORT OF THE DEPUTY MINISTER

17

CANADA'S DOMESTIC EXPORTS BY MAIN GROUPS, 1929-30

CANADA'S TRADE VIA THE UNITED STATES, 1929-30

There has been a steady decline in the imports into Canada from overseas countries via the United States, especially in imports from the British Empire. The decrease in the total imports via the United States during the fiscal year 1930 compared with 1927 amounted to \$2,911,331; the imports from the United Kingdom showing an increase of \$314,163; but a decrease from other British countries of \$2,610,820, and from foreign countries of \$614,674. The appended table shows that imports from the United Kingdom via the United States from 1927 to 1930 increased from \$728,001 to \$1,042,164, while imports from other British countries decreased from \$3,832,540 to \$1,221,720, and imports from foreign countries from \$8,200,679 to \$7,586,005. The proportions were: United Kingdom, 1927, 0.4 per cent; 1930, 0.5½ per cent; other British countries, 1927, 7.7 per cent; 1930, 1.9 per cent; foreign countries, 1927, 6.3 per cent; 1930, 5.1 per cent.

Per cent of total imports from Overseas Countries.....	3.7	3.1	2.9	2.4½

Exports from Canada to overseas countries via the United States show very little change for the years 1927, 1928 and 1929, though there was a marked decline in 1930, no doubt due to falling off in Canada's wheat exports. In 1927 the proportion was 39.5 per cent of all exports to overseas countries; in 1928, 38.9 per cent; in 1929, 36.7 per cent; and in 1930 it was down to 33.8 per cent. The statistics in the following table show that Canada's exports to overseas countries via the United States were: United Kingdom in 1927, \$216,313,069; in 1930, \$113,333,242; other British countries in 1927, \$23,549,163; in 1930, \$22,762,811; and foreign countries in 1927, \$70,422,646; and in 1930, \$69,069,677. The proportions were: United Kingdom, 1927, 48.4 per cent; 1930, 40.2 per cent; other British countries, 1927, 25.1 per cent; 1930, 23.2½ per cent; foreign countries, 1927, 28.7 per cent; 1930, 30.6 per cent.

CANADA'S POSITION IN INTERNATIONAL TRADE

The statistics in the following table showing "Total Trade of Ten Leading Countries of the World" indicate that Canada occupies the same position in total trade as last year. In 1913 she was in eighth position in total trade, being exceeded by the United Kingdom, Germany, the United States, France, the Netherlands, British India and Italy, but in 1929 she had advanced to fifth position, having displaced the Netherlands, British India and Italy.

Canada, in import trade, among the ten leading importing nations, occupied eighth position in 1913, being exceeded by the United Kingdom, Germany, United States, France, the Netherlands, Belgium and Italy. In 1929 she had advanced to fifth position, displacing the Netherlands, Belgium and Italy. The particulars are set forth in the following table:—

In export trade, Canada in recent years has made greater progress than in import trade, though for the year 1929 the exports show a decline, due to falling off in the Dominion's grain exports. Even with the serious decline in exports, the Dominion occupied fifth position among the leading commercial countries of the world. In 1913 Canada occupied ninth position in export trade, being exceeded by the United Kingdom, the United States, Germany, France, the Netherlands, British India, Belgium and Argentina, but in 1929 she occupied fifth position, having displaced the Netherlands, British India, Belgium and Argentina. The particulars are set out in the appended table:—

DOMESTIC EXPORTS FROM TEN LEADING COUNTRIES OF THE WORLD

Canada has made a creditable showing since 1913 among the principal commercial countries of the world in trade per capita. In the year 1913 Canada occupied fifth position in import trade per capita, seventh in export trade per capita, and sixth position in aggregate trade per capita; but in 1929 she occupied fifth place in imports per capita, third place in exports per capita, and fourth place in aggregate trade per capita. The particulars as to the trade per capita of ten leading countries of the world, are set out in the following table:—

PER CAPITA TRADE OF TEN LEADING COUNTRIES OF THE WORLD

In 1913 Canada in trade balance occupied fifteenth position among the leading trading countries of the world, with an unfavourable trade balance of \$222,900,000 or \$29.61 per capita, but in 1929 she was in twelfth position with an unfavourable trade balance of \$90,655,000 or \$9.13 per capita. The particulars are set out in the appended table:—

Commercial Intelligence Service

The Director of the Commercial Intelligence Service writes as follows:—

On March 15, 85 candidates, each a graduate of a Canadian university, presented themselves for the written examinations in connection with appoint-

ments to the Commercial Intelligence Service. Of these 60 passed the test, and from that number eight will be selected to begin training in the Department in June as Junior Trade Commissioners. No more gratifying illustration could be afforded in support of the department's endeavour to have the Commercial Intelligence Service regarded as a career. One year ago the total number of candidates who wrote was 42, of whom 30 passed, and two years ago five only were successful out of 14.

It is equally gratifying to find that the interest was so widespread. The distribution of candidates, according to examination centres, was as follows: Vancouver, 5; Calgary, 2; Edmonton, 1; Regina, 1; Saskatoon, 5; Moose Jaw, 1; Brandon, 2; Winnipeg, 5; Windsor, 5; London, 3; Hamilton, 2; Toronto, 22; Kingston, 3; Ottawa, 8; Montreal, 12; Quebec, 1; Sherbrooke, 2; Three Rivers, 1; Summerside, 1; Moncton, 1; Halifax, 2.

SYSTEM OF EXAMINATION

Examination consists of a written test of the candidate's general knowledge of Canadian resources, the principles of export trade, etc., which counts for 40 per cent; and an oral examination, conducted by an officer of the department and an officer of the Civil Service Commission, to determine the value of the candidate's education, personal and physical fitness, which counts for 60 per cent. The written examination is held at various centres throughout Canada and a board, consisting of an officer of the department and an officer of the Civil Service Commission conducts the oral examination of successful candidates at these centres.

Aside from good appearance and address, which are most essential, the principal requirements for a Junior Trade Commissioner include physical fitness, age between 21 and 31, unmarried, a knowledge of the principles of foreign trade and of the resources of Canada. The education required is equivalent to graduation from a university of recognized standing or from the Royal Military College. Preference is given to candidates with a degree of B.Com., and there are also bonus marks for languages.

On appointment, successful candidates report at the department for eight to twelve months' training, and if found to be suitable are posted as Assistant Trade Commissioners to offices abroad for further training under Trade Commissioners. Promotion to the rank of Trade Commissioner is made as new offices open or vacancies occur.

EDUCATIONAL STANDING OF PERSONNEL

Of the 50 members of the service on March 31, 1929, three were non-university men, seven had attended universities abroad, and Canadian universities had contributed to the personnel as follows: Toronto, 6; McGill, 9; Queen's, 9; Saskatchewan, 5; Laval, 3; British Columbia, 2; Mt. Allison, Royal Military College, Dalhousie, Ottawa, Manitoba and Acadia, 1 each.

RESULTS ACCOMPLISHED BY TRADE COMMISSIONERS

It is impossible, by any system of statistics, to represent adequately not only the activities of Canadian Trade Commissioners abroad, but more particularly, the extent to which they have influenced new business for Canadian firms. However, an examination of the annual and quarterly progress reports, received from each office during the year, shows the following:—

New business reported.....	\$ 6,180,218
Number of agents appointed.....	604
Number of special reports upon foreign markets for Canadian firms.....	4,245

A mere statement of the number of Canadian firms who have been introduced by Trade Commissioners to foreign buyers or the number of agents who have been appointed on the recommendation of Trade Commissioners is simply an indication that certain business has been initiated. In the great majority of cases, direct evidence is unobtainable as to the value of business which has resulted. The part which the Trade Commissioner plays in such negotiations ends when the arrangement is completed, and thereafter it is no part of his duty to canvass firms so aided with a view to learning developments. Such attempts would be misunderstood by foreign firms and sometimes by Canadian firms. Canadian exporters, familiar with the work of the Commercial Intelligence Service, are, however, increasingly disposed to report to what extent business has been developed through the assistance of the Trade Commissioners. In the course of a year hundreds of letters of appreciation are received. A few illustrations will suffice to show the nature of the assistance afforded and the results:—

(a) A representation by a Trade Commissioner resulting in revised specifications for railway sleepers enabled a Canadian firm to obtain an order valued at \$200,000.

(b) A large indent firm in the United States makes a practice of referring to the Trade Commissioner for Canadian sources of supply and have gone on record as having purchased in Canada last year for shipment abroad goods to the value of \$350,000.

(c) A representation by a Trade Commissioner for a more favourable ruling on the admission of a certain product into a certain country has effected a saving, according to the estimate of the Canadian firm, of \$50,000 per annum.

(d) A Trade Commissioner undertook to find out, if possible, to what extent initial orders which he had assisted in the preceding year had developed, and learned that \$200,000 worth of business had resulted from these contacts.

NEW OFFICES

As a result of surveys looking to possibilities for trade expansion in certain territories, seven new offices were established. With the appointment of Mr. J. A. Langley, Trade Commissioner at Kobe, to Commercial Secretary to the Canadian Legation at Tokyo, the increase was eight. The dates upon which these were opened were as follows:—

Oslo, April 1.

Chicago, April 15.

Hong Kong, May 6.

Lima, June 4.

Athens, June 15.

Panama, June 26.

Tokyo, June 16.

San Francisco, March 1.

VISITS OF TRADE COMMISSIONERS TO CANADA

Trade Commissioners return to Canada every two years from tropical or unhealthy posts, every three years from semi-tropical posts, and every four years from other posts, for the purpose of renewing their knowledge of Canadian conditions and conferring with Canadian exporters. During the course of their tour they call upon every firm whom they wish to see or who have expressed a desire to see them.

The following Trade Commissioners were on tour during the fiscal year 1929-30:—

E. L. McColl, Buenos Aires.

R. T. Young, Port of Spain.

L. D. Wilgress, Hamburg.

H. R. Poussette, Calcutta.

A. B. Muddiman, Milan.

J. C. Macgillivray, Rotterdam.

D. H. Ross, Melbourne.

The following Trade Commissioners will be on tour in Canada during the fiscal year 1930-31:—

D. S. Cole, Bristol.
James Cormack, Havana.
G. R. Heasman, Batavia.
C. N. Wilde, Mexico City.
G. B. Johnson, Glasgow.

F. W. Fraser, Kingston.
Paul Sykes, Hong Kong.
A. S. Bleakney, Rio de Janeiro.
C. S. Bissett, Cape Town.
J. Forsyth Smith, London (Fruit).

CONFERENCES OF TRADE COMMISSIONERS

On October 8 and 9, a conference of Trade Commissioners in the United States, namely, Messrs. Hudd, O'Meara and Poussette, was held in New York City and presided over by the director. As a result of the deliberations, a definite basis for co-operation between the offices in the United States was established, as also co-ordination of office administration and methods.

On March 15 to 21, the Trade Commissioners in the Far and Middle East—Messrs. Cosgrave, Langley, Sykes, and Heasman—met in conference at Shanghai. Hon. H. H. Marler, Canadian Minister to Japan, was present at the sittings. Several important decisions were reached relating to the delimitation of territories and arrangements concluded for interchange of commercial information.

CONFERENCE OF BUSINESS PRESS

On January 30, in Toronto, the minister and the director met in conference with the leading publishers, editors and executives of the Canadian National Newspapers and Trade Periodicals Association. The meeting was informal and, for the purpose of arranging better and more practical co-operation in the way of utilizing their columns for trade publicity, and thereby making available to the department a very valuable means of creating throughout the Dominion an atmosphere friendly to the extension of export trade.

ALLOCATION OF TERRITORY

Bermuda, which for many years formed a portion of the territory assigned to the Port of Spain office, was transferred on October 1, to the New York office. Originally this Colony was allocated to the Barbados office, as one of the chain of Islands served by the Royal Mail Steam Packet Company. Later on the Canadian National Steamships commenced to operate their Western Service, when it came under the Jamaican office. It was found, however, that the office in New York was in a much better position to deal promptly with any inquiries from this colony.

Southern Manchuria was transferred, on October 1, from the territory of the Shanghai office to that of Kobe. The boundary between the Chinese and Japanese territories for trade purposes is regarded as the boundary between Korea and Manchuria.

The territory of British North Borneo has now been assigned to the Hongkong office.

APPOINTMENT OF LIASON OFFICER

Mr. E. E. Freeland on July 22, 1929, was appointed Chief of the Commercial Division of the Canadian Exhibition Commission. He is a member of the staff of the Exhibition Commissioner in London, but will act as liaison officer between the Exhibition Commissioner and the Trade Commissioners in the United Kingdom and on the Continent. In so far as the Commercial Intelligence Service is concerned, his main duty will be to take charge of the Information Bureau which it is customary to install at every exhibition for the purpose of dealing with trade inquiries and to prepare reports on these exhibitions for publication in the *Commercial Intelligence Journal*.

CHANGES AFFECTING PERSONNEL

During the year the following changes affecting personnel in the way of appointments, promotions and transfers were made:—

Maurice Belanger, appointed Assistant Trade Commissioner at Paris, November 15, 1929.

H. W. Brighton, appointed Assistant Trade Commissioner at Buenos Aires, December 24, 1929.

F. W. Bull, appointed Assistant Trade Commissioner at New York, November 4, 1929.

B. C. Butler, appointed Assistant Trade Commissioner at Batavia, January 13, 1930.

E. E. Gauvreau, appointed Assistant Trade Commissioner at Lima, June 4, 1929.

G. R. Heasman, Assistant Trade Commissioner at Batavia, promoted to be Trade Commissioner, January 1, 1930.

J. A. Langley, Trade Commissioner at Kobe, appointed Commercial Secretary to Canadian Legation, Tokyo, May 21, 1929.

B. A. Macdonald, appointed Assistant Trade Commissioner at Shanghai, December 26, 1929.

P. V. McLane, appointed Assistant Trade Commissioner at Kobe, April 12, 1929.

J. L. Mutter, appointed Assistant Trade Commissioner at Cape Town, June 3, 1929.

G. A. Newman, appointed Assistant Trade Commissioner at Liverpool, November 17, 1929.

R. S. O'Meara, Trade Commissioner at Batavia, opened new office at Chicago, April 15, 1929.

F. H. Palmer, appointed Assistant Trade Commissioner at Oslo in March, promoted to be Trade Commissioner, April 22, 1929.

H. R. Poussette, formerly Trade Commissioner at Calcutta, opened new office at San Francisco, June 1, 1929.

H. L. E. Priestman, appointed Assistant Trade Commissioner at Auckland, December 25, 1929.

W. J. Riddiford, appointed Assistant Trade Commissioner at Shanghai, April 15, 1929, and transferred to Hongkong, December 29, 1929.

R. U. Slayter, Assistant Trade Commissioner at New York, resigned December 19, 1929, to go to ill health.

G. R. Stevens, formerly Trade Commissioner at Cape Town, opened new office at Lima, June 4, 1929.

J. A. Strong, Assistant Trade Commissioner at Liverpool, promoted to be Trade Commissioner and transferred to Panama, June 26, 1929.

Paul Sykes, Assistant Trade Commissioner at Auckland, promoted to Trade Commissioner and transferred to Hongkong, May 5, 1929.

A. J. Tingley, appointed Assistant Trade Commissioner at Glasgow, December 9, 1929.

Henri Turcot, Assistant Trade Commissioner at Paris, promoted to be Trade Commissioner and transferred to new office at Athens, June 15, 1929.

Jack Vechsler, appointed Assistant Trade Commissioner at Chicago, April 28, 1929.

THE WORLD'S CUSTOMS TARIFFS

Customs duties applicable to Canadian goods exported to the various markets of the world, as well as related laws and regulations, were the subject of many inquiries received daily by the Department of Trade and Commerce. Firms contemplating larger activities in the export field or needing advice on the tariffs and customs laws under which they are already trading look more and more each year to the Department of Trade and Commerce for this class of information. There was a preponderance of requests for data concerning Empire tariff preferences applicable to Canadian products. A booklet on this subject, issued by the department, had a wide circulation. Special compilations for individual firms, however, are usually necessary in order to disseminate this information in a form precise enough to be of practical value to exporters, each being interested in his own particular product. The volume of inquiries was to some extent increased by new tariff legislation in British and foreign countries and the adoption of new trade regulations that have to be observed by Canadian exporters. While tariff revision throughout the world is too large a subject to be dealt with in detail, it is usual under this heading to refer to tariff conditions of some outstanding interest.

TARIFFS OF THE BRITISH EMPIRE

United Kingdom.—The limited tariff of Great Britain was maintained with little change. Tea duty of 4 pence per pound ($3\frac{1}{2}$ pence for Empire tea) lapsed as from April 22, 1929, and an amended hop oil duty became effective from August 16, 1929. The 1930 Budget (April 14) made no immediate tariff change other than adding 1 penny per gallon to the customs and excise tax on beer.

It was announced in the 1930 Budget that safeguarding duties on lace, cutlery, gloves, and gas mantles, would be allowed to expire at the end of the five year period for which these duties were enacted, namely, on June 30, 1930, for lace, and on December 21, 1930, for the other goods. These articles have been subject to $33\frac{1}{3}$ per cent ad valorem when of foreign origin and a rate one-third lower when produced within the Empire.

Expansion of intra-imperial trade by means of preferential tariffs was much discussed in England, and formal motions pertaining to certain aspects of this large question were the subject of debate in the British House of Lords on December 9, 1929, and the House of Commons on January 29, 1930.

Irish Free State.—The Irish Free State as from November 8, 1929, extended its comparatively short dutiable list by imposing a 20 per cent rate on unfilled quilt covers of silk or artificial silk, and also on such covers when containing down or feathers. A preferential rate one-third lower was granted on Empire goods of this class.

Australia.—Resolutions providing for upward revision of the Australian tariff were introduced in parliament on August 23, 1929 (affecting 16 items), on November 21, 1929 (affecting 114 items); and on December 12, 1929 (affecting 18 items). In each case the new duties became effective forthwith. On April 4, 1930, further resolutions increased rates by 50 per cent on 51 items of the tariff and prohibited, except under licence, importation of 69 articles or groups of articles, while the imports under 11 headings were restricted to 50 per cent of importations during the previous twelve months. The Prime Minister stated that the objective was to reduce the Australian adverse balance of trade and to encourage domestic manufactures.

New Zealand.—A New Zealand primage duty of one per cent ad valorem which originated in 1915 was advanced on August 1, 1929, to 2 per cent ad valorem. The tax reverted to 1 per cent as from March 31, 1930, on many foodstuffs and a few other articles. Otherwise the New Zealand tariff was almost stationary.

South Africa.—The Union of South Africa, on January 21, 1930, increased its maximum tariff on wheat from 19 pence per 100 pounds to 26 pence and on March 19, 1930, further to 32 pence. The latter 6 pence increase is to be operative only to July 1, 1930, and thereafter is to be a suspended duty which may be imposed by proclamation. Canada is accorded the minimum tariff on wheat which is 2 pence per 100 pounds lower than the rates quoted in each case. Wheat flour duty was advanced on January 21, 1930, from 44 pence to 52 pence per 100 pounds and on March 29, 1930, to 68 pence to become 60 pence as from July 1, 1930, with a suspended duty of 8 pence. Canada is accorded a minimum tariff on wheat flour which is 4 pence per 100 pounds lower than the rates quoted. Some other tariff changes were made effective from July 26, 1929; August 1, 1929; and March 26, 1930.

India.—The Cotton Textile Industry (Protection) Bill of India which went into operation on April 4, 1930, granted a preference of 5 per cent ad valorem on certain piece goods when produced in the United Kingdom of Great Britain and Northern Ireland. An Indian preference on some steel products from Great Britain and Northern Ireland had been established by the Steel Industry (Protection) Act of 1927. These two measures constitute the extent to which tariff preference is granted in India on any imports.

Canada.—A Canadian Order in Council of April 16, 1929, effective from May 2, 1929, put into operation a preference on bananas for the purpose of implementing a provision in the Canada-West Indies Trade Agreement. Bananas had been duty free under all schedules of the Canadian tariff. They remain duty free under the British Preferential schedule "when imported from the place of growth by ship direct to a Canadian port." When imported otherwise from a country under the British Preferential tariff or when arriving from countries subject to the Intermediate or the General tariff, the rate is 50 cents per bunch.

Jamaica.—The Government of Jamaica gave notice on March 20, 1930, that after September 30, 1930, the preferential tariff on Canadian goods would apply only if the goods enter the colony by direct shipment. This was the first instance of action taken in the West Indian colonies under Article VII of the Trade Agreement with Canada which empowers each colony, on giving six months' notice, to require that Canadian products be conveyed without transshipment by ship direct from a Canadian port or by way of one of the other colonies in order to be entitled to the tariff concessions granted in the agreement. Already Canadian preferences on West Indian products are conditional on conveyance direct to a Canadian sea or river port, transshipment being permitted only at any of the colonies.

UNITED STATES TARIFF REVISION

Revision of the United States Tariff Act of 1922 was a subject of interest during the whole period under review and for some time afterwards. Following tariff hearings before the Ways and Means Committee of the House of Representatives the President, at a special session of Congress assembled on April 15, 1929, recommended an "effective tariff upon agricultural products" and "some limited changes" in schedules relating to other industries. A Tariff Bill was introduced in the House of Representatives on May 7, 1929, passed that body on May 28, 1929, and at another session of Congress after hearings before the Senate Finance Committee passed the Senate on March 24, 1930. Numerous amendments had been made as the Bill progressed from stage to stage and in order to reach an agreement on these, conferences were held between representatives of the two branches of Congress. The measure as finally reported by the conference was approved by the President and went into operation on June 18, 1930.

The rate of 42 cents per bushel on wheat and \$1.04 per 100 pounds on wheat flour, established April 6, 1924, under the flexible provision of the 1922 Tariff Act, was incorporated in the new law. The duties on milk and cream increased 50 per cent on June 13, 1929, under the flexible provision, were advanced still more in the new tariff, namely, to 6½ cents and 56.6 cents per gallon respectively. The tariff on potatoes was increased from 50 cents to 75 cents per 100 pounds; cattle, weighing 1,050 pounds or more from 2 cents per pound to 3 cents; lighter cattle from 1½ cents to 2 cents or 3 cents; beef from 3 cents to 6 cents; pork from 1 cent to 2½ cents; bacon and hams from 2 cents to 3¼ cents. To an appreciable extent the duties on fish were unchanged. Fresh lobsters as before are duty free. Another item remaining duty free is standard newsprint paper, of which Canada's export to United States during 1929 was 129 million dollars.

While the importance and scope of tariff items vary greatly, the extent of the complete revision is indicated in some degree by an official statement to the effect that on about 3,300 items in the new tariff, rates on 2,170 are unaffected, 90 are increased, and 235 are decreased.

Special and administrative provisions of the tariff law were extensively revised. Among these is the flexible provision first incorporated into the United States Tariff in 1922. It is retained with modifications but, as before, the President is empowered on recommendation of the Tariff Commission to increase or reduce duties up to 50 per cent or change the basis of valuation for duty purposes from foreign or export value to the United States selling price.

LATIN AMERICAN COUNTRIES

Cuba.—A Canadian Order in Council and a Cuban Presidential Decree of December 3, 1929, renewed until November 22, 1931, a trade agreement under which Canada exchanges her Intermediate tariff for the Cuban General tariff. A Cuban Maximum tariff, established first in 1927, is double the General tariff but apparently is so far inoperative. The Maximum tariff may be applied wholly or in part, to goods from non-treaty countries or from countries which do not accord Cuba most-favoured-nation treatment. A Canadian-Cuban arrangement like the present one has been in force since the inception of the Maximum tariff. In so far as dutiable goods are concerned, United States products (tobacco excepted) are still accorded a Cuban preference of 20 per cent, 25 per cent, 30 per cent, or 40 per cent, over those of any other country in consequence of a Reciprocity Treaty of 1902. Any other instances of unequal tariff treatment of Canadian goods entering Cuba are of a minor nature and arise out of a Cuban-Spanish Treaty, effective from November 5, 1927. These reductions are also granted to a few favoured nations, including France and Italy. Notable among recent Cuban tariff changes is a new rate on potatoes, the leading import from Canada. The General tariff on potatoes other than seed was increased on July 4, 1929, from \$2 per 100 kilograms (220 pounds) to \$5 during the months of November to June inclusive, the high duty season being at the same time extended by two months. The rates for the rest of the year were advanced from \$1 to \$1.50 per 100 kilograms. Cut seed potatoes and others with some restriction as to variety and season still enter duty free.

Peru.—Peruvian laws effective March 30, 1929, June 8, 1929, and January 1, 1930, affected about 130 of the 2,600 items of the tariff. Under the last mentioned law the duty on motor trucks, an important Canadian export to Peru (\$383,892 in 1929) was increased from 1 sol (40 cents) per 220 pounds to 2 soles (80 cents). In addition to the duties there are surtaxes which, although varying slightly at different ports, amount to a little more than one-fifth of the duty. Among the commodities entering largely into Canada's export trade with Peru not affected by the foregoing laws were passenger motor cars (\$299,397 in 1929), condensed and evaporated milk (\$279,865), wheat (\$238,350), and pneumatic tire casings (\$121,414).

New tariffs were introduced in Guatemala, July 1, 1929, and in Mexico, January 1, 1930. Minor alterations were made in the tariffs of most of the other Latin American countries, Argentina being an exception although the Argentine tariff has not been amended much since 1923.

EUROPEAN TARIFFS

The Roumanian customs tariff of April 14, 1927, which was in operation when the Canadian Trade Agreements Act of 1928, effected a most-favoured-nation arrangement with Roumania and six other countries was replaced on August 1, 1929, by a new tariff law. The 1927 tariff enactment consisted of two schedules, minimum rates, and corresponding general rates, 50 per cent higher. In the new Roumanian tariff there are irreducible minimum rates on some goods and the law affords the means of lowering the general tariff in trade conventions with other countries. The 1929 tariff law provided for terminating existing treaties as from March 1, 1930, but a further six months could be allowed for negotiations. The Roumanian tariff arrangement with Canada was based on acceptance by Canada of a most-favoured-nation clause in an Anglo-Roumanian Provisional Commercial Agreement of May 24, 1923. Roumania gave notice on November 26, 1929 to terminate the Canadian agreement. At first the termination was to become effective after six months but the time was afterwards extended.

Other new European tariffs were adopted in: Lithuania, June 2, 1929; Sweden, January 1, 1930; Portugal, January 6, 1930; Russia, February 15, 1930. Some European tariffs were also amended extensively and particularly as regards grain duties. It will be of interest to trace in some detail the extent of such revision in Germany to which Canada exported in 1929, according to Canadian returns, 20 million dollars worth of wheat, rye, oats, barley, and wheat flour.

The German tariff on wheat was increased on July 10, 1929, from 5 to 7.5 reichsmarks per 100 kilograms; on January 20, 1930, to 9.5 reichsmarks; and on March 27, 1930 to 12 reichsmarks. During the same period flour duty rose from 12.5 to 23.25 reichsmarks per 100 kilograms. The General tariff on oats was advanced on July 10, 1929, from 5 to 7 reichsmarks per 100 kilograms; on December 31, 1929, to 8 reichsmarks; on March 27, 1930, to 12 reichsmarks. The rates of 2 reichsmarks for feeding barley and 7 reichsmarks for industrial barley were both raised to 10 reichsmarks per 100 kilograms, and on rye from 5 to 9 reichsmarks. These duties were to some extent determined by a law of December 22, 1929, which established a sliding scale of duties for wheat and rye dependent on prices, and also fixed wheat flour duties at $1\frac{1}{2}$ times the wheat duty plus $4\frac{1}{4}$ reichsmarks— $5\frac{1}{4}$ from March 26, 1930. On this latter date oats and barley were made subject to variable duties dependent on the economic situation. While the foregoing are all General tariff rates applicable to non-treaty countries, like Canada, they became also applicable to all countries in consequence of the termination of certain treaty rates. On July 10, 1929, a French treaty rate (1927) of $11\frac{1}{2}$ reichsmarks on flour terminated and on February 11, 1930, a Swedish treaty rate (1926) of 6.5 reichsmarks on wheat lapsed. On February 11, 1930, Swedish treaty rates of 6 reichsmarks per 100 kilograms on rye and oats and 5 reichsmarks on barley expired. The final rates expressed in Canadian currency were: wheat, \$2.85; wheat flour, \$5.54; rye, \$2.14; barley, \$2.38; oats, \$2.85—all per 100 kilograms (220 pounds) and applicable to imports from all countries.

TURKEY AND EGYPT

A new customs tariff went into force in Turkey on October 1, 1929, and in Egypt on February 17, 1930. The new tariffs compared with the customs schedules replaced contain much more detailed classification of goods and a corresponding variety of rates. The new tariffs also afford the means for imposing discriminatory duties on goods arriving from non treaty states or those which do not reciprocate in granting their lowest tariffs.

Dominion Bureau of Statistics

On the Dominion Bureau of Statistics, administered by the Minister of Trade and Commerce, a detailed report is made annually (Statistics Act, 1918, section 4a) by the Dominion Statistician, the officer in responsible charge. The Bureau operates in several branches and sections, a very brief reference to which is as follows:—

POPULATION (CENSUS, VITAL STATISTICS, IMMIGRATION)

A good deal of the preparatory work looking to the 1931 Census of Population and Agriculture was completed, the scope of the approaching census having been thoroughly canvassed and the schedules and instruction drawn up in tentative form. The plotting of the enumeration areas was completed. The permanent staff in this connection was strengthened, for completion of preparatory analyses, more particularly in connection with the statistics of Occupations and Agriculture. Special studies on Women in Industry and on occupations by racial origins, based on the census of 1921, were carried out.

In vital statistics the usual monthly and annual reports, compiled in collaboration with the provincial Registrars General, were issued, whilst the usual monthly compilations with regard to migration statistics from data supplied by the Immigration Department were also made.

AGRICULTURE

The crop-reporting system was further strengthened and some improvements made in the existing arrangements for annual agricultural statistics with the several provincial Departments of Agriculture with whom the Agricultural Branch of the Bureau collaborates. A considerably enlarged scheme was put in effect in Ontario, and an entirely new system was planned for covering the province of Quebec. Mr. F. J. Horning, Chief of the Branch, resigned during the year, and was succeeded by T. W. Grindley, Ph.D., a graduate of Alberta and Minnesota Universities.

INDUSTRIAL CENSUS

All forms of production outside of agriculture (namely, fisheries, furs, forestry, mines, central power stations, and general manufactures) are covered annually in the Bureau in a series of branches under the above general heading. The organization includes (1) The branch on Fisheries, Furs, Animal Products and Dairying, and (2) the manufactures of Forest Products; (3) the Mining, Metallurgical and Chemical Industries; and (4) General Manufactures, with central filing, compiling and indexing systems. These were maintained at full strength, and issued the usual series of annual and monthly reports. The more important of the latter are the Annual Report on the Fisheries of Canada; Fur Production; Fur Farms; the Dairying Industry; Lumbering; the Pulp and Paper Industry; Wood-Using Industries; Paper-Using Industries; the Mineral Production of Canada; Coal Statistics; Iron and Steel and their Products; Manufactures of Non-Ferrous Metals; Manufactures of the Non-Metallic Minerals; Chemicals and Allied Products; Textiles and Allied Industries; Food Products, Beverages, Rubber, Tobacco and Miscellaneous Manufactures based on Vegetable Products; and General Manufactures. Some fifty or sixty annual reports on specific industries should be added to this list. In addition, monthly records are maintained relating to coal and coke, pulp and paper, automobiles, boots and shoes, and power. From January 1, 1930, a monthly statement of the production of the more important metals and minerals has been issued.

Mr. S. J. Cook, Chief of the Mining, Metallurgical and Chemical Branch, resigned during the year, the position being filled by the promotion of Mr. W. H. Losee, formerly statistician in the branch.

EXTERNAL TRADE

The work in this branch has increased continuously. It now embraces the final and definitive Annual Report on the Trade of Canada, an annual Condensed Preliminary Report on the same subject, a Quarterly Trade Report, as well as a special trade report compiled for the calendar year. The monthly statements brought out include a general review of Canadian trade, an analysis of the trade with the United States and Great Britain, together with some twenty-five bulletins on the import and export trade in special commodities or groups of commodities, which are distributed to a large number of interested concerns. The number of special trade compilations made was larger than in any previous year.

INTERNAL TRADE

In the field of price statistics (which covers wholesale and retail prices, prices of securities, prices of various "services", etc.,) the main development of

the year was the thorough revision of the different index numbers on the new base year 1926, 1913 being the basis previously employed. Improved bulletins on the movement of capital into and out of Canada and the trade balance were issued. A good deal of preparatory work in connection with the proposed census of retail distribution to be taken in 1931, the compilation of which will be carried out in this branch, was completed. A study of the chain store movement obtained considerable publicity. The preparatory work for a monthly barometer of retail and wholesale sales was completed.

TRANSPORTATION AND PUBLIC UTILITIES

In railway statistics a special annual report on traffic by provinces was instituted. In other directions the annual statistics of railways were maintained with little change, as were also the monthly reports on railway operating revenues and expenditures, weekly carloadings, etc. Annual reports on the statistics of telegraphs, telephones, express companies, and central electric stations were issued. The canal statistics were maintained on the usual monthly and annual basis. The Bureau took over during the year the Annual Report on Highways and Motor Vehicle Traffic previously maintained in the Highways Branch of the Department of Railways and Canals. An index of freight rates, on which the branch has been working for some time, was brought some stages nearer conclusion.

EDUCATION

The Annual Survey of Education contained as special features (1) a study of teachers' pensions plans in the different provinces, and (2) additional statistics with regard to higher and university education. Additional compilations of teachers' returns were made for certain of the provinces. The annual report on libraries, which is brought out under the direction of this branch, was also enlarged. The chief of the branch gave a considerable portion of his time to preliminary analysis in connection with the 1931 census, and also completed an extensive investigation into methods of intercensal population estimation in Canada. Special investigations on the statistics of the liquor trade in Canada and of the trend of the salaries of professional and technical officers of the Civil Service (the latter for the Royal Commission of which Mr. E. W. Beatty was chairman) were also completed in the branch.

CRIMINAL STATISTICS

A reconstruction on a considerable scale of the tabular matter issued in the Annual Report on the Statistics of Criminal and other Offences in Canada was worked out during the year and will take effect in the forthcoming issue, the revision adding to the compactness and availability of the data. The work of this branch was the subject of numerous inquiries during the year from authorities in various States of the United States, in view of the interest in that country in the setting on foot of similar records.

GENERAL STATISTICS

The issuing of the Canada Year Book and of the Monthly Review of Business Statistics constituted as in past years the main work of this branch, which also brings out certain statistics at first hand on various subjects that do not fall under the other branches of the Bureau, such as employment, divorce, bankruptcies, etc. A departure of the year that met with pronounced success was the issuing of a handbook in the opening week of 1929, entitled "Canada 1930." The handbook, which was illustrated with numerous rotogravures and

charts, was intended to present in succinct yet comprehensive form the outstanding facts of recent progress in Canada as well as of the current economic and social situation. It will probably be repeated from year to year.

LIBRARY

Following the removal to the present Statistics building, a consolidation of the library was effected and its contents were more conveniently shelved. The total number of statistical publications catalogued is now nearing 60,000. There was a considerable growth in receipts and loans during the year, increasing general use being made of the library for purposes of reference and investigation. An increase of one in the Library staff enabled this work to be handled with increased efficiency.

GENERAL ADMINISTRATION

There has been a steady increase in the volume of correspondence with the public, the number of applications for information daily averaging around 100. The number of reports and bulletins issued by the Bureau daily is now between two and three. The annual revision of the Bureau's mailing lists in this connection shows a growing demand—particularly from the business public—an index of the practical uses being made of the Bureau's various activities. The staff of the Bureau averaged around 250 throughout the past year.

Exhibition Commission

During the first month of the fiscal year the transfer of all exhibition material from the temporary quarters at Gun Wharves, Wapping, to the commission's new warehouse and workshops on Blackburn road, West Hampstead, was completed.

In June the former warehouse of the Immigration Department in Liverpool was closed and all material transferred to West Hampstead.

Due to the increasing activities of the Exhibition Commission the need of additional staff called for the appointment of E. E. Freeland, in July, as Chief of the Commercial Division, and of A. T. Seaman, in October, as Assistant Exhibition Commissioner.

EXHIBITIONS

In close collaboration with the Trade Commissioners in the British Isles, and co-operating to the fullest extent with the Empire Marketing Board of the British Government, the Commission took part in the following exhibitions:—

April 2-13.....	Ideal Homes and Central Trades Exhibition	Bradford.....	Food products.
April 9-20.....	Belfast Grocers and Allied Trades Exhibition	Belfast.....	Food products.
May 1-11.....	Scottish Grocers Exhibition.....	Edinburgh.....	Food products.
May 8-11.....	Royal Dublin Society Show.....	Dublin.....	Food products; natural resources and mfg. goods.
July 3-6.....	Aldershot Command and District Horse Show.....	Aldershot.....	Food products and natural resources.
July 15-20.....	Empire Exhibition.....	Plymouth.....	Food products.
August 13-14.....	Boscombe Carnival.....	Boscombe.....	Advertising propaganda.

Decorative material, grain, etc., was prepared and shipped, on loan, to the following:—

Migration Committee.....	Hull and District
Rev. Father Pander.....	Polish Exhibition
Crosse & Blackwell Ltd.....	Tropical School of Medicine
Colonial Church Society.....	Southsea
International Boy Scouts Jamboree.....	Birkenhead
Teachers' Exhibition.....	Southampton
Trade Exhibition.....	Scarborough
Empire Overseas Exhibition.....	Darlington
Empire Overseas Exhibition.....	York
Messrs. T. Mottershead & Son.....	Longton Agricultural Show
Educational Exhibition.....	Gainsborough

Material was prepared and shipped and exhibits set up in the following departmental stores:—

John Barker, Ltd.....	London
Army and Navy Stores, Ltd.....	London
Civil Service Supply Association.....	London
Jas. Shoolbred.....	London
Wm. Whiteley, Ltd.....	London
Harrods.....	London
Fortnum & Mason Ltd.....	London
Cooper & Co.....	London
R. A. Lister.....	Dursley
Spooner & Co.....	Plymouth

Material was prepared and shipped and a display made in the windows of the following stores throughout the country:—

Jas. Shoolbred.....	London
Jas. Howell & Co. Ltd.....	Cardiff
M. Oak.....	Bolton
Anglo-Empire Fruit Co., London.....	London
Miller & Steel, Ltd.....	Ipswich
John Edwards.....	Blackburn
D. A. Costa.....	London
Joseph Beckett, Ltd.....	London
Staniforth & Wibley.....	London
J. W. Clay.....	Bournemouth
Co-Operative Society.....	Bradford
Wm. Boniface.....	Plymouth
Lloyds Stores.....	Colchester
Sainsburys Ltd.....	London
Imperial Institute.....	London
North-East Coast Exhibition.....	Newcastle
Trades Exhibition.....	Edinburgh

Decorative and advertising material was sent to ninety-four bazaars and pageants.

ADVERTISING

Advertising material prepared by the Director of Trade Publicity was warehoused, and 138 shipments of this material were made to different points throughout the country. In addition to these shipments, distribution of Trade and Publicity advertising material was made by members of our staff during the Bristol Shopping Week at 400 shops in Bristol.

TRADE INQUIRIES

Since the Chief of the Commercial Division began his duties as liaison officer between the Exhibition Commission and the Trade Commissioners, about 350 trade inquiries have been received at the different exhibitions, and of these upwards of 200 could be answered directly, being simply the question of where such a product could be purchased, when the name of the importer was given from whom the exhibit had been received. The remainder were immediately passed on to the Trade Commissioner of the district. In addition to these, upwards of 5,000 inquiries were received from consumers. These were handled directly by the officer on the stand by giving the name, or names, of the retailers where the articles could be obtained.

SALE OF SAMPLES

On the recommendation of the Trade Commissioners, and after the support of the importers had been assured, the sale of samples was instituted at the exhibitions. This was organized by the Commercial Division in co-operation with the Director of Trade Publicity, who supplied the labels. It is operated on a self-supporting basis, the small margin of profit being sufficient to pay the wages and expenses of the salesladies required at the different stands.

All samples are marked "Samples only", with the word "Canada" prominently shown and not more than sixpence is charged for any one article.

At the five exhibitions where samples have been sold, about 20,000 have been disposed of, and the importers are well pleased with the results.

IMMIGRATION

The Immigration Shows are divided into three classes, according to the type of exhibit, first, those in which a marquee is erected and an exhibit set up therein, of this type, there are four, namely:—

May 22-25—Bath and West Agricultural Show, Swindon.

May 29—Royal Counties Agricultural Show, Southampton.

July 9-13—Royal Agricultural Show, Harrogate.

August 7-9—Royal Welsh Agricultural Show, Cardiff.

Secondly, those in which a 40-foot stand was erected, namely:—

May 29-31—Royal Ulster Agricultural Show, Balmoral.

July 23-26—Highland and Agricultural Society's Show, Alloa.

July 31-August 1—Royal Lancashire Agricultural Show, Blackburn.

August 28-30—Southport Agricultural Show, Southport.

Thirdly, those in which a 20-foot stand was erected, 98 in number, in localities best suited to cover the British Isles.

The commission was responsible for preparing and shipping all material for these shows. Officers from this department attended 34 shows, lasting for two or more days. The commission was responsible for erecting, maintaining and dismantling the exhibits at these shows.

Decorative and advertising material was sent to 88 schools and training centres.

Propaganda displays were made in 50 windows on account of immigration. These windows were placed at the disposal of the commission by the Ministry of Labour and different shipping companies throughout the country.

During the year, 879 cases were received in the warehouse and distributed. The average weight of each case is two hundredweight and the number of pieces of literature in each runs from 300 to 5,000, according to the size of the pamphlet.

SCOPE OF COMMISSION'S WORK

The activities of the Exhibition Commission fall naturally under two distinct headings, Trade and Commerce, and Immigration.

Under the latter heading, the commission's work is restricted to the preparation, setting and dismantling of the larger stands and exhibits, and to the preparation and shipping the smaller stands to the Immigration Agent of the locality. The selection of all fairs is entirely in the hands of the Immigration Department.

Under the former heading, the Exhibition Commissioner, in collaboration with the Trade Commissioners in the British Isles, select those exhibitions which promise the greatest returns for the outlay as well as the fairs and exhibitions in which the Empire Marketing Board is participating. In these latter, space and stand are supplied free of charge to the different dominions and Colonies who wish to take advantage of the opportunity.

The erection of the pavilion, and all preparatory work for the International Exhibition at Antwerp, which opened on April 26, 1930, was practically completed by March 31, despite the fact that it was not until late in the year that official sanction was finally given for Canada's participation. Another exhibition in this category is the British Empire Trade Fair, which is to open in March, 1931, in Buenos Aires, Argentina. The plans have been drawn up and the contract placed for the erection of Canada's pavilion. Canadian manufacturers and producers had taken about 60 per cent of the exhibit space by the close of the fiscal year.

The British Industries Fair—held in two sections, one at Olympia, London, the other at Castle Bromwich, Birmingham—is an exhibition which calls for special mention being, next to the Leipzig Fair, perhaps the most important and productive annual exhibition in the world. It is local to the extent that only products and manufactures of the British Empire can be shown, but it is international in that buyers from practically every country of the world attend. It is, therefore, of the utmost importance that the opportunities here offered be taken advantage of to the fullest possible degree. Without exception, every Canadian firm which exhibited at the British Industries Fair was satisfied with the results obtained. It is only regretted that a greater number of Canadian firms did not exhibit.

The explanation is simply that the Canadian producer does not appreciate, in many cases does not know of, the vast opportunities which this Fair offers for extending his market. All parts of the world are reached, and orders having been taken by Canadian firms from countries as widely separated as Germany, Australia and the Argentine Republic.

Motion Picture Bureau

The Director of the Canadian Government Motion Picture Bureau reports that the last fiscal year was one of the most successful in its history. In practically every branch and phase of their work there was a substantial and encouraging increase in the volume of production and distribution, and the Bureau's activities were further extended into many new fields.

In the Motion Picture Division the volume of film prepared and processed exceeded that for the previous fiscal year by approximately 20 per cent, while the total number of copies of films in active circulation on March 31, 1930, was approximately 35 per cent greater than on March 31, 1929. There was a correspondingly large increase in the volume of production of photographs, lantern slides, enlargements, transparencies and similar material by the Still Photographic Division, while the number of photographs, etc., issued for publication and other such purposes, and consequently the amount of publicity and advertising thereby achieved, was considerably greater.

Of especial note is the increasingly greater extent to which the Bureau's facilities for the production and distribution of motion and still photographic materials were taken advantage of by other Government Departments and organizations. Not only was the total production of such special departmental material increased substantially, but the saving to the Government organizations making use of the service was increasingly large owing to the Bureau's ability to produce such material at lower cost than heretofore, owing to the installation of more up-to-date processing equipment and the introduction of more modern methods.

While the annual appropriation for the Bureau was increased by \$25,000, to make a total of \$75,000 for the fiscal year under review, as compared to \$50,000 for the previous year, the total contingency expenditure was greater only by virtue of increased volume of production, materials used and the natural extension of the Bureau's activities in all fields. The total expenditure of the Bureau for 1929-30 amounted to \$74,128.60, but of this amount fully 30 per cent was expended for the purchase and installation of new equipment and the provision of additional facilities to meet the requirements of the increased volume of production.

Due to the rapid and widespread development of the sound film to such an extent that this type almost completely displaced the silent film in so far as the theatrical field was concerned, and the fact that the Bureau lacked the means to produce sound films, there was a decided decrease both in the number of theatrical bookings and the revenue derived therefrom during the fiscal year under review. Since the revenue derived from theatrical bookings is probably our largest individual source of income, there was, as a consequence, a slight decrease in the total revenue of the Bureau as compared with that of the previous fiscal year. That the loss in revenue may be fully attributed to this condition is borne out by the fact that the revenue derived from other sources was substantially greater than for the previous year, but was not sufficient to offset the loss in revenue from theatrical distribution.

The total revenue figures for the past four fiscal years are as follows:—
1926-27, \$15,128.88; 1927-28, \$17,912.06; 1928-29, \$25,833.29; 1929-30, \$23,416.18.

DISTRIBUTION OF FILMS

The total number of films in active circulation throughout the world on March 31, 1930, was 3,589, representing a total footage of approximately 2,900,000, as compared with 2,779 films representing a total footage of approximately 2,223,200 in active circulation on March 31, 1929. From exhibition reports submitted by our distribution agencies, there is ample evidence that, during the fiscal year under review, there was a much greater "coverage" in each territory in which films were being circulated and exhibited the previous year, while in many new territories, particularly in the Scandinavian countries, central Europe and the West Indies, where heretofore little or no circulation had been secured, wide exhibition of the Bureau's films was achieved during 1929-30.

The schedule below indicates the distribution of the films in active circulation as of March 31, 1930:—

Territory	In Theatrical circulation and revenue- producing	In Theatrical and Non-theatrical circulation, but not revenue- producing
Australia, New Zealand, Tasmania, etc.	220 (x)	
Austria, Czechoslovakia and other Central European Countries		43 (xx)
Belgium		41 (xx)
Canada	150	400
China		12 (xx)
Cuba		22 (xx)
Czechoslovakia	25	15 (xx)
France, Switzerland		56 (approx.)
Germany		63 (xx)
Great Britain, Irish Free State, etc.	99	191
Hawaii		24 (xx)
Holland		32 (xx)
India		4
Italy		121 (xxx)
Japan		14 (xx)
Norway, Sweden, Denmark	60	51 (xx)
South Africa		55 (xx)
South America		28
Straits Settlements, Netherlands East Indies, etc.	80	20 (xx)
United States		1,594
West Indies, Caribbeans, etc.		70
Total	639	2,856

(x) Revenue-producing films in theatrical circulation also used for non-theatrical showings.

(xx) Films in non-theatrical circulation also used for non-revenue-producing theatrical showings.

(xxx) Includes 6 duplicate negatives furnished Italian Government from which 15 positive prints are made at their expense and circulated through the Government film organization L.U.C.E.

No E.—The above schedule does not include films or parts of films furnished during the past year to replace films which had become worn, destroyed, damaged or out-of-date.

It is conservatively estimated that approximately 75,000 feet of replacement film was produced and furnished distributors during the past fiscal year.

The above schedule does not include, either, a large number of films purchased by the Canadian National and Canadian Pacific Railway Companies or loaned to them for publicity and advertising purposes; nor does it include a large number of films loaned for short periods to Canadian Pacific, White Star, Cunard, Hamburg-Amerika, North German Lloyd, Canadian-Australian and other steamship lines, for screening on their passenger vessels at sea; nor does it include a large number of films made from our negatives by organizations such as the above, the Ontario Government, etc., for their own purposes.

FILM DISTRIBUTION—GENERAL CONDITIONS, ETC.

Conditions in the motion picture industry during the past fiscal year throughout the world were not nearly so favourable in so far as the Bureau was concerned as during the previous fiscal year. In the theatrical field, the almost complete "turn-over" to sound films and the tremendous growth of the number of theatres and other places of film exhibition making use of sound films very greatly curtailed the outlets for silent product and this caused a very considerable drop both in the amount and extent of theatrical circulation secured for Bureau films as well as a distinct diminution of the revenue derived from this source.

On the other hand, in the educational and other non-theatrical fields where the use of sound films has not grown to any extent and where the use of films is daily becoming more widespread, our distribution both in volume and extent has shown an increase of nearly fifty per cent.

DISTRIBUTION OF FILMS IN CANADA

Theatrical.—Owing to the extremely rapid growth in the use of sound films and the fact that the great majority of the theatres to whom we had formerly booked our product were, during the past fiscal year, equipped for the exhibition of sound films, the theatrical distribution of our films in the Dominion has been somewhat less than in the previous year but this is a condition beyond our control and cannot be eradicated until the Bureau is able to meet market requirements and competition in this field by supplying sound films.

Non-theatrical.—Due chiefly to the growing use of motion pictures for educational and other non-theatrical purposes, the domestic distribution of our films in this field increased very considerably during the past fiscal year. This distribution has been largely handled directly by the Bureau through the maintenance of a loan library of our films available at a nominal charge to organizations, institutions and individuals who are able to make use of them. The Bureau has also co-operated fully with the various Provincial Governments, the railway companies, educational institutions and others in making groups of our films available through them in the non-theatrical field in this country and the number of films circulated in this manner continues to grow daily.

DISTRIBUTION ELSEWHERE IN THE BRITISH EMPIRE

United Kingdom and Irish Free State.—During the fiscal year under review, the distribution in both the theatrical and non-theatrical fields remained about the same in volume and extent as during the previous fiscal year. The introduction and wide use of sound films in this territory curtailed the outlet for films in the theatrical and commercial fields and minimized what appeared to be excellent prospects for much increased circulation at the commencement of the past year. However, the distribution held its own with the previous year and, as soon as the Bureau is in a position to provide sound films, it is fully expected that the theatrical distribution will increase very considerably. In the non-theatrical field, through co-operative arrangements with the Federation of British Industries, the Empire Marketing Board, the British Empire Institute, and other organizations, the circulation of our films has shown a satisfactory increase.

Australia, New Zealand, Tasmania, etc.—Due to new legislation favouring the use of films of British origin, the circulation in the Antipodes has increased very considerably and the revenue derived therefrom has shown a very substantial increase. Circulation in the non-theatrical field has also shown progress due to the growing use of films for education and welfare purposes. The latter circulation has been increased largely through the efforts of the Trade Commissioners in this territory.

South Africa.—Distribution in this country continues to show a satisfactory increase, particularly in the educational and other non-theatrical fields. The theatrical distribution is handled through the largest commercial film distribution and theatre-operating concern in this territory and has been most satisfactory.

British West Indies.—The circulation of the Bureau's films in both the theatrical and non-theatrical fields has increased very largely in the various parts of the British West Indies and in the Caribbean countries which have been grouped as one territory for distribution purposes. During the past year, arrangements were made with several commercial film companies to handle selections of the Bureau's films and they have been widely exhibited in increasingly large numbers. In the non-theatrical field, through the efforts of the Trade Commissioners, many special film showings have been arranged, while many films have been made available to various organizations for the same purpose. The number of films in active circulation in the West Indies has, during the past fiscal year, been increased by more than 1,000 per cent.

Straits Settlement.—In this territory, in which the Netherlands East Indies are also grouped, more than twice the number of films as during the previous year have been widely circulated in the theatres through arrangements made with commercial firms operating here by the Trade Commissioner in Java. Practically every theatre in this territory has been exhibiting periodically.

DISTRIBUTION IN THE UNITED STATES

Theatrical.—Theatrical circulation in the United States has not been as great as it was hoped during the past year. The growth of sound films and the extreme competition of the more widely known domestic product have been the chief obstacles but, despite conditions in this field, theatrical distribution has shown a quite substantial increase.

Non-theatrical.—Non-theatrical distribution in the United States is perhaps the Bureau's most prolific and valuable field and has shown a marked increase each year. During the past fiscal year, the number of agencies with whom arrangements have been made for circulation either nationally or territorially has increased by five, making a total of 50. The number of films placed in circulation through these agencies throughout the United States has increased by about 35 per cent and the number of showings secured, while not definitely estimable, is unquestionably much greater.

DISTRIBUTION IN FOREIGN COUNTRIES

Norway, Sweden and Denmark.—Heretofore, what circulation was secured in these countries was limited and sporadic and chiefly in the non-theatrical field. During the past fiscal year arrangements have been concluded with the Government-controlled film agencies in these countries to circulate regularly to the chief theatres in these countries a minimum of ten films per year, and a plan whereby the films for each country shall be interchanged periodically has been developed. The Bureau is now receiving wide circulation in the larger theatres throughout these countries under the above auspices, while a certain amount of non-theatrical circulation is being secured through the efforts of the Trade Commissioner at Oslo.

Belgium.—Considerable theatrical circulation is being secured in both the theatrical and the non-theatrical fields, through a co-operative arrangement with the "Université Cinographique Belge," to whom a large number of films have been supplied. Extensive and valuable circulation is being secured not only in Belgium but in France, Holland and Denmark, among educational, welfare and similar organizations and institutions.

Holland.—Extensive theatrical and non-theatrical circulation is being secured in this country by a large commercial agency who purchase groups outright, and their distribution includes certain portions of Denmark and Belgium. In the non-theatrical field, considerable circulation is being obtained through the efforts of the Trade Commissioner at Rotterdam, who has a supply of films on hand available for this purpose.

France and Switzerland.—Due to restrictive legislation against foreign films, the wide circulation enjoyed some years ago in this territory has gradually become negligible, but during the year under review arrangements have been concluded with the largest domestic film concern—"Aubert-Franco Films"—to distribute a series of pictures and, while it is too early to predict what progress will be achieved, circulation in France and Switzerland has already shown a very favourable increase. In the non-theatrical field, considerable circulation has been achieved in this territory through the efforts of the Legation and of the Trade Commissioner's office, and through the supply of special films to a number of well-known lecturers.

Germany.—Circulation in Germany has shown a greater increase than probably any other foreign country during the past year. Extensive theatrical and non-theatrical circulation has been obtained through co-operative arrangements with the North German Lloyd Company, which controls Germany's largest film concern "UFA," and with the Hamburg-Amerika Steamship Company. Through these concerns wide distribution has been secured in German theatres as well as a large number of non-theatrical bookings, and their own officials and lecturers have been supplied with copies of special films to be shown in conjunction with travel promotional efforts. In addition, considerable non-theatrical circulation has been arranged by the Trade Commissioner in Germany, with whom a supply of films is kept available for this purpose. During the past fiscal year some five or six well-known German lecturers were supplied with films to illustrate talks on Canada.

Italy.—In Italy, where the Government exercises rigid control of the exhibition of films and there are regulations requiring that at every film performance an educational film must be shown, the Bureau continued to benefit by a co-operative arrangement with the Government's film organization—L.U.C.E.—to whom duplicate negatives of selected groups of the Bureau's films were supplied. From these negatives, the L.U.C.E. reproduce at least fifteen positive copies from which the widest circulation in both the theatres and in non-theatrical fields under the auspices of the Italian Government is secured.

South America.—The growth in the use of sound films in the chief countries of South America has, to some considerable extent, affected the extent of circulation of the Bureau's product but, despite these adverse conditions, the volume of circulation has not decreased greatly and has been more than offset by increased non-theatrical exhibitions and special showings arranged or made possible by the Trade Commissioners on this continent. To increase the latter type of circulation, groups of films have been placed at the disposal of each of the Trade Commissioners, and arrangements are being made for interchange between offices.

China and Japan.—The Far East does not provide an exceptionally good field, but notwithstanding quite substantial distribution in China and Japan has been secured through the efforts of the Trade Commissioners in these countries, who have been able to make arrangements with film circuits, theatres and other organizations to show the Bureau's films from time to time. Some non-theatrical distribution has also been secured through the International Y.M.C.A. Motion Picture Bureau, and through the purchase from time to time by native educational organizations of prints of our films.

PRODUCTION AND DISTRIBUTION OF STILL PHOTOGRAPHIC MATERIAL

During the past fiscal year, the activities of the Still Photographic Division have probably expanded to a greater extent than during any year of its existence: the volume of production has increased fully 25 per cent.

During the past fiscal year the production of still photographic materials for the Canadian Government Exhibition Commission has been taken over—work which was formerly done either by the Natural Resources Intelligence Service or secured from outside sources. In addition, a great increase in the volume and extent of photographic work for the National Parks of Canada Branch, the Department of Immigration and Colonization, and the Agricultural Department is to be noted. In the latter case, the work has been largely of a technical and scientific nature.

Other developments have been the undertaking of special photographic work for the National Research Council and the Experimental Farm, and greater activities in supplying photographs to news agencies and publications.

CO-OPERATIVE WORK WITH GOVERNMENTAL DEPARTMENTS AND ASSOCIATED ORGANIZATIONS

The production of motion picture and still photographic material for various governmental departments and associated organizations, has shown a considerable increase.

Among the features of the development of this branch of our work during the past fiscal year has been the taking over of the motion picture equipment of the Photographic Section of the Royal Canadian Air Force and the undertaking of all motion picture production work for this organization; the increased number of technical and scientific films produced for various government departments; and the taking over of practically all motion picture production work for the National Parks of Canada Branch heretofore done by outside commercial concerns.

The governmental departments and branches thereof, and other organizations in some way associated with the Government Service, for whom the Motion Picture Bureau has produced motion pictures and still photographic material, on a co-operative basis, during the past fiscal year, include:

- Air Services, R.C.A.F.
- Canadian Legation, Washington, D.C.
- Canadian Legation, Paris, France.
- Canadian War Graves Commission.
- Canadian National Railways.
- Canadian Pacific Railway.
- Canadian Government Trade Commissioners.
- Canadian Geographical Society.
- Canadian Forestry Association.
- Canadian Clubs, Association of.
- Central Experimental Farm (12 Divisions).
- Chamber of Commerce, British West Indies.
- Civil Service Commission.
- Department of Agriculture
 - Dairy and Cold Storage Branch
 - Entomological Branch
 - Fruit Branch
 - Health of Animals Branch
 - Live Stock Branch (7 Divisions)
 - Publications Branch
 - Seed Branch.
- Department of Immigration and Colonization.
- Department of Insurance.
- Department of the Interior:
 - Secretary's Branch
 - National Parks of Canada Branch
 - Forestry Branch
 - Natural Resources Intelligence Service
 - North West Territories and Yukon Branch.
- Department of Labour.
- Department of Marine and Fisheries:
 - Fisheries Branch
 - Fish Culture Service
 - Deputy Minister's Office
 - Hudson Straits Expedition.
- Department of Mines:
 - Administrative Branch
 - Geological Survey Branch
 - Mines Branch
 - National Museum.
- Department of National Defence:
 - Minister's Office
 - Deputy Minister's Branch
 - Historical Section
 - Imperial War Graves Commission
 - Supply and Transport Services
 - Canadian Small Arms School
 - Signal Services.

Department of Pensions and National Health.
 Department of Public Works.
 Department of Railways and Canals.
 Department of the Secretary of State.
 Department of Trade and Commerce:
 Deputy Minister's Office
 Commercial Intelligence Service
 Electricity and Gas Inspection Service
 Exhibition Commission
 Weights and Measures Branch
 Bureau of Statistics.
 Dominion Archives.
 House of Commons (Speaker, Sergeant-at-Arms, etc.).
 High Commissioner's Office, London, England.
 National Council of Women.
 National Research Council.
 Parliamentary Press Gallery and correspondents.
 Prime Minister's Office.
 Provincial Government of British Columbia.
 Provincial Government of Manitoba.
 Provincial Government of New Brunswick.
 Provincial Government of Nova Scotia.
 Provincial Government of Ontario.
 Provincial Government of Quebec.
 Provincial Government of Saskatchewan.
 Poppy Day Committee.
 Post Office Department:
 Postmaster-General's Office
 Secretary's Branch
 Staff and Publicity Branch.
 Patent and Copyright Office.
 Railway Commission.
 United States Legation, Ottawa, Ont.

PROSPECTS FOR DEVELOPMENT AND EXPANSION

Just at the close of the fiscal year under review, the Bureau began the transference of its operations to larger and more modern quarters in one of the buildings of the National Research Council. The plant, specially reconstructed for the purpose, will, with more modern equipment either installed or to be installed, provide for the production of all types of film and photographic material by much more efficient and economical methods and will have much greater capacity than the old plant. It will also provide for the entry of the Bureau into new fields of activities such as the production of sound and 16-mm films and special types of technical films and photographs such as microscopic pictures, animated drawings, film slides, etc.

The 16-mm. film—a new type of motion picture that has become recognized as the universal sub-standard size throughout the world—has not only been the means of greatly extending the use of films in the non-theatrical fields particularly for educational, lecturing and advertising purposes, but is now rapidly displacing the use of standard film for such purposes owing to its greater safety and ease in handling and less cost. The Bureau has installed complete semi-automatic mechanical equipment of the latest type for production of this type of film and will enter this field on a large scale during the current fiscal year.

It is expected in the near future to actively enter the production of sound films for theatrical use. Already some preliminary work in this connection has been done, using the facilities of commercial studios, and the results have not only proven satisfactory but the reaction to the films themselves has indicated that there would be a large and profitable field for them.

Publicity

The branch of the Director of Publicity of the Department of Trade and Commerce has during the year continued to carry on various advertising campaigns designed primarily to expand Canadian export trade. In addition, however, to these activities the branch, by reason of an increase in staff, has been able to prepare for use in various newspapers and periodicals throughout the Dominion and elsewhere informative articles and news material.

With respect to advertising conducted during the year, the following statement gives some idea of the number of messages carried, as based upon the circulation of publications in which various advertisements appeared:—

August 24, 1929, one-page advertisement appearing in 125 daily newspapers, financial papers, magazines and general media: total circulation, 2,856,448.

Week of December 9, 1929, advertisement in 604 weekly newspapers, 10 by 5 columns: total circulation, 960,456.

Week of January 9, 1930, advertisement 280 lines by 6 columns in 126 daily newspapers, financial papers, magazines and general media: total circulation, 3,141,944.

From August, 1929, to March, 1930, one- and two-page advertisements appeared in a selected list of trade papers. Ten pages were given to 42 media, and four pages to 2 media: total circulation, 1,435,328.

Total messages distributed in 1929-30 through the above media, 8,394,176. This compares with a total number of messages distributed in 1928-29, amounting to 7,630,931.

In addition to the above advertising placed exclusively in Canada, the branch undertook through an advertising agency to place a succession of three part-page advertisements in three of the most prominent daily publications in Buenos Aires, the object of this advertisement being to do certain spade work in connection with the forthcoming Empire Exhibition to be held in that city in February of 1931. These advertisements were well displayed and secured a certain amount of editorial comment. Further advertising was placed in certain Canadian and foreign annual publications, which were regarded as highly useful for reference purposes.

It may again be stated by this branch that in connection with the year's advertising placed in various publications there has been gratifying editorial reaction, generally indicative of a desire on the part of the publications in question to co-operate in the efforts of the branch to create and expand the export consciousness of the Canadian people. This has been particularly true in connection with the trade journals, whose demand for reading matter to supplement the advertisements placed is constantly growing. An endeavour has been made to select a group of trade journals throughout the Dominion, as representative as possible of the various industries of Canada engaged in or interested in export trade. These journals, with few exceptions, have co-operated in a very satisfactory manner with the branch in furthering the efforts of the Trade Commissioners of Canada to secure new markets for their various clients. Their numbers are constantly increasing, but it has been the policy of this branch to secure from any applicants for advertising all the information possible regarding the industries which they represent, and to have them justify their claims as proper media for the advertising of export trade. The researches conducted by many of them in this direction have been highly valuable.

During the year there has been a considerable demand from various United States publications for advertising from this branch. So far, however, no expenditures have been made in this direction.

The contract entered into between the Department of Trade and Commerce and Reuters Ottawa Bureau on May 1, 1928, for the preparation of a weekly mail service to at least 100 of the principal papers of Central and South America, Mexico and Cuba, aggregating at least 50,000 words annually at a cost of \$6,000 per annum, has in the opinion of this branch been carried out in a highly satisfactory manner. As a matter of fact, the number of papers to which this service

in Spanish has been sent by Reuters now numbers over 200 instead of 100, and the aggregate wordage is approximately 65,000 instead of 50,000. In addition, the company is now undertaking to send selected Canadian photographs to a number of the papers which are now taking the news service. The company also undertakes to keep in close touch with the Canadian Trade Commissioners in the various countries concerned, and to secure from them suggestions as to any improvement which can be made in this service which has as its purpose the promotion in Latin American countries of interest in Canada and Canadian activities, commercial, financial and industrial. All items sent by this service have been mailed also to the Canadian Trade Commissioners in the countries referred to.

This branch has had in mind for some time past the supplementation of this news service by a certain amount of advertising in a selected list of the publications of Latin American countries.

Throughout the year a daily radio news service has been compiled by the Canadian Press and broadcasted free through the auspices of the Department of Marine and Fisheries to Pacific liners. Prior to the inauguration of this service, which is paid for by this branch at the rate of \$100 a month, complaints had been received from persons returning from or going to the Orient or elsewhere, that the bulk of news transmitted was of almost purely United States origin. The service now being broadcasted is almost entirely of British and Canadian origin. The suggestion has been made that a similar service be provided for Atlantic liners.

This branch has during the fiscal year prepared and distributed a weekly review of Government statistics and a number of brief articles based on the reports of the Canadian Trade Commissioners abroad. These have been given wide publicity throughout Canada, and have greatly helped to make known the value of the service performed by the Dominion Bureau of Statistics and the Commercial Intelligence Service. Special publicity campaigns have been carried out to arouse interest in the International Exhibition at Antwerp and in the British Empire Trade Fair at Buenos Aires. Special news articles have been issued from this branch in connection with appointments or changes in the Commercial Intelligence Service and the arrival in Canada of various Trade Commissioners, and in connection with the changes in personnel of the Board of Grain Commissioners of Canada. In co-operation with Mr. D. G. Gerahty, Director of Canadian Publicity in the United Kingdom, the branch has secured publication of numerous photographs and news items supplied by Mr. Gerahty, and was able to give wide publicity to the successful campaign in Bristol known as Bristol Canada Week.

Special lengthy articles have been prepared for many important magazines, and special editions of newspapers throughout the world. In addition, special articles and year-end reviews have been prepared and generally circulated throughout the daily and financial press of Canada, and in various trade publications.

During the year the Department has worked in satisfactory co-operation with the Canadian Press and Reuters in the dissemination of news.

TRADE PUBLICITY IN GREAT BRITAIN

The Director of Trade Publicity in Great Britain reports as follows:

The conclusion of the second year of this Branch's existence shows a very great extension in its activities. Probably the most important work accomplished has been arranging window and counter displays in fruit shops and groceries throughout the British Isles. It will readily be seen that the creation of a window display by a retailer of Canadian goods which he is stocking, completes the last link in the chain of distribution between the importer and the consuming public. Manifestly window displays purely for display purposes and not of goods which are actually in stock, have little value.

It has been for many years the practice in this country for retailers to place a high valuation upon space in their windows allocated for the display of proprietary articles; such space is easily rented. It has been the object of this branch to provide the retailer with attractive display matter, which costs a considerable sum in the mass, but when worked out on a basis of so much per retailer, is trifling.

During the year the number of grocers making a display of Canadian products, in practically all cases for a period lasting one week, totalled approximately 2,200. This figure does not take into account what has in a large number of cases occurred, that the same display matter has been used a second and a third time.

In addition to displays secured in the windows of grocers, a number in excess of 11,000 fruit shops, during the Canadian apple season from November to April, displayed sets of apple advertising material. The preponderance of displays of apple material secured is accounted for by the fact that this branch had the services of the Fruit Trades Federation, with ready-made machinery for distribution, which greatly facilitated the work. The latter was also facilitated by the operation of the Merchandise Marks Act, which is intended to make the people of this country conscious, where they were not conscious before, of the origins of the commodities they purchase.

Canada weeks were organized in two cities during the year, Glasgow and Bristol.

SPECIAL DISPLAYS BY THE LEADING DEPARTMENT STORES

During the year under review arrangements have been made with the following important stores in London to organize special displays of Canadian produce: William Whiteley's; Shoolbred's; Army and Navy Stores; Civil Service Supply Association; Haymarket Stores; and John Barkers. The above firms, who have excellent facilities for display, devoted important windows and valuable space in the interior of the stores, to an exhibition of Canadian products, which was not only a commercial display, but assisted to a very appreciable extent with grain, processed fruits, plaques and other matter loaned by the Canadian Government Exhibition Commission.

UNPAID PRESS PUBLICITY

The most important function of the branch from its inception has been the securing of unpaid space for publicity matter in the British daily press, trade press, and magazines. During the year this work has been carried on with great success. In addition a certain amount of matter largely focussed on exhibitions has been disseminated. A number in excess of 15,000 press cuttings has by this means been secured, giving to Canada prominence in the news of the day more than that given to any other portion of the British Empire, if sporting news be excepted.

Expressed in monetary terms, on the most conservative basis of calculation, bringing in mind the ordinary advertising rates of publications in this country, publicity secured by this branch has greatly exceeded the total appropriation expended by the branch.

APPRENTICE GROCERS' SCHOLARSHIP TOUR OF CANADA

Mr. C. L. T. Beeching, O.B.E., Secretary of the Institute of Certified Grocers, at the head of a party of five students of the Institute, sailed in the *Laurentic* on Friday, August 16, 1929, for Canada, where they made a tour of food producing centres in Eastern and Central Canada. The tour was arranged by the Publicity Branch in co-operation with the Institute, and very able assistance was rendered by the Canadian National Railways.

LISTS OF STOCKISTS OF CANADIAN FOOD PRODUCTS

An innovation which has been well received, has been the printing of lists of stockists of Canadian food products in the areas where exhibitions are being held. This provides a simple method of informing the public where they may buy any particular Canadian product in which they are interested. Lists of stockists have been prepared in the following districts: Hull, York and district; Bristol and Bath; Glasgow; and the North-East Coast Area.

EXHIBITIONS

During the year the Publicity Branch actively co-operated with the Canadian Government Exhibition Commission by making all publicity arrangements at twenty-four exhibitions. The assistance rendered consisted of preparing advertisements in catalogues and other special publications devoted to the exhibitions, and in certain cases where there was sufficient justification, in preparing advertisements in the daily press and trade press. Publicity matter designed for free insertion was distributed to the press in all cases, with varying results.

EXHIBITS AT SCHOOLS

Much of the printed matter prepared by this branch, both letterpress and illustrated, has been found, although not designed to that end, to have a considerable educational interest. It has been thought advisable in all cases to meet the request of schools for printed matter. A number of schools have spontaneously offered prizes to their pupils for the best coloured copies of our posters.

LECTURES AND ADDRESSES

The Director of the branch has received a number of applications from time to time for lecturers and speakers on Canadian subjects. In certain cases he has complied himself, and in others arranged for speakers. These have included certain paid lecturers fully qualified to speak on their subjects, and prominent Canadians in London such as Mr. W. C. Noxon, Agent General for Ontario, Mr. C. J. Hanratty, Chief of the Press Bureau of the Canadian National Railways, and others.

EMPIRE WEEKS

During the course of the year Empire Weeks have been organized by the Empire Marketing Board in the following towns and cities in Great Britain:

London, Plymouth, Walton-on-Thames, Clapham, Staines, Chingford, Belfast, Southampton, Bromley, Abertillery, Hull, Aldershot, Fort Talbot, and Mexborough.

In conjunction with these Empire Weeks, the Publicity Branch has co-operated with the Exhibition Commission and with the Empire Marketing Board.

Board of Grain Commissioners for Canada

MOVEMENT AND HANDLING OF 1929 WESTERN CANADIAN GRAIN CROPS

The outturn of the 1929 grain harvest in the Prairie provinces was a great disappointment, not only to farmers but to transportation and industrial interests and the grain trade generally. And to make matters worse, the prospect of marketing the surplus abroad at a price ensuring a good return to farmers appeared more difficult as the season progressed. The wheat crop of 1928 had proved to be some 543 million bushels, far exceeding that of any previous season whilst Argentina also reaped the largest crop in its history and the United States had a substantial surplus to market. The result of this was a volume of export grain far in excess of the requirements of importing countries, and the carry-over at the end of the season was the largest ever known.

The 1929 crops in Europe, both of wheat and coarse grains, turned out to be of much larger volume than usual. This was a particularly fortunate circumstance for those countries usually importing considerable grain to augment native production, as owing to financial stringency it was essential that every effort be made to utilize their own grain and avoid the necessity of importing further supplies as far as possible. To ensure this, and to encourage an increased home production, Germany, France and Italy placed heavy duties upon imported grain and flour. France also ordered millers to use 97 per cent home grown wheat in milling, and Germany ordered that at least 50 per cent of the amount milled be home-grown wheat.

In spite of these conditions, Argentina continued shipping its surplus to Europe throughout the fall season; the storage facilities in that country being limited, thus making essential the movement of the crop to make room for the crop to be harvested in the winter. A great deal of this grain arrived in European ports unsold to be offered for what it would fetch, and as the storage facilities were already fully taken up, it became necessary for purchasers of the grain to charter the vessels in which it arrived as storage boats for periods of from one to three months. This flood of Argentine wheat not only depressed price levels, but effectually cut off the usual demand for North American wheat, so that the possibility of marketing the carry-over of 1928 grain, plus the surplus from the 1929 crop, without leaving another large carry-over appeared extremely remote.

In order to maintain favourable financial and business conditions throughout the country, and to provide capital for the development of natural resources, Canadian exports must exceed the value of imports and thus provide new capital to the extent of the difference. The effect of the substantial reduction in the volume of grain exported during the season of 1929-30 to date has already been quite pronounced in all parts of the country.

The grading of the wheat crop is remarkably high, as will be seen from Table appended. The quality of the Argentine crop, on the other hand, is very poor and the amount of exportable surplus far below the average. A larger proportion of the European import requirements during the balance of the crop year will be purchased in North America, and the superior quality of Canadian wheat will undoubtedly ensure Canadian exporters receiving a large share of the business.

The following tables indicate (a) the total quantities of wheat and other grains received at principal terminal points during the first eight months of the crop year 1929-30 (ending March 31, 1930); and (b) the number of cars of new wheat, and percentage, grading into each of the principal grades during the first eight months of the crop year 1929-30, as compared with the same period of the year previous.

Weights and Measures Inspection

The Director of the Weights and Measures Service reports that, although the financial returns for the year ending March 31, 1930, show a drop of very nearly \$10,000 in the surplus, compared with 1929, the fact is more creditable than otherwise to the service.

Figures and totals do not mirror weights and measures work in its true perspective or usefulness. Efficiency embodies economy and economy reacts on monetary totals. To those who pay inspection fees a large surplus is a challenge, so that, within the principle of self-support, improved finances, through increasing inspection work, should ease inspection charges collectable from trade and industry.

Because of the surplus of \$72,534.88 for 1928-29, instructions were issued to the service to reduce the cartage levy by about 10 per cent (the cartage levy is a charge that is made at each inspection, in addition to the statutory inspection fee, on a pro rata basis, to cover the cost of transporting and carting test weights and standards), and the records show this reduction amounted to \$7,185.45 for 1929-30.

Increasing work, however, offset this reduction and closed the year with an increase in revenue of \$8,050.64. The figures are as follows:—

	1928-29	1929-30	Increase
Revenue.....	\$ 399,308 06	\$ 407,358 70	\$ 8,050 64
Expenditure.....	326,773 18	344,566 35	17,793 17
Surplus.....	72,534 88	62,792 35	

If no unforeseen and radical changes take place in trade practices, such a might dispense with a whole class of inspectable equipment, as the chain store and package goods have greatly reduced the number of retail shop scales, the time may not be far distant when the statutory inspection fees alone will carry the Service and permit of the elimination of the cartage levy altogether, except in special cases, and so free the service from an unpopular charge.

INSPECTION STATISTICS

The following table gives a summary of the weights and measures equipment inspected during the year:—

Articles	Submitted	Verified	Rejected	Percent. of Rejection
Weights (Dom.).....	85,631	81,675	3,956	4.6
Weights (metric).....	1,214	1,195	19	1.5

Weighing machines (metric).....	504	482	22	4.3
	575,213	544,642	30,571

SEIZURES AND PROSECUTIONS

During the year thirty-six weighing machines were seized as unfit or unlawful for use, and fourteen miscellaneous articles, mostly inaccurate measures.

There were sixteen prosecutions, convictions being secured in all cases, the fines totalling \$110.

Of these, six proceedings were for the sale of short weight, a source of trouble that unfortunately seems to be on the increase and to which the Weights and Measures Service is giving closer attention, as it not only involves fraud upon the public, but embodies a most destructive element of unfair competition.

The comparative fewness of rejections, seizures and prosecutions is mainly due to the Canadian system of inspection of all equipment before it is sold or taken into use for trade, and to the holding of all importations by the Customs officials until approved or refused entry by the nearest Inspector of Weights and Measures. This keeps the country almost free from fraudulent, defective, unlawful and cheap devices.

More particular information concerning the Weights and Measures Service, with detailed statistics, can be found in the separate Weights and Measures Annual Report.

Electricity and Gas Inspection Services

The following is a comparative statement concerning the activities of the Electricity and Gas Inspection Branch for the two years ending March 31, 1930, furnished by the director:—

	1928-29	1929-30
<i>Electricity and Gas Inspection Acts—</i>		
Electricity meters tested.....	324,998	345,052
Gas meters tested.....	134,161	144,517
Total number of meters tested.....	459,159	489,569
<i>Revenue—</i>		
Electricity inspection.....	\$ 212,251 65	\$ 228,168 00
Gas inspection.....	92,447 90	100,838 10
Total revenue.....	\$ 304,699 55	\$ 329,006 10

	1928-29	1929-30
<i>Expenditure—</i>		
Electricity inspection.....	\$ 143,790 81	\$ 162,866 61
Gas inspection.....	60,036 70	61,070 11
Total expenditure.....	\$ 203,827 51	\$ 223,936 72
<i>Electricity and Fluid Exportation Act—</i>		
Revenue—		
Export tax.....	\$ 351,108 78	\$ 318,042 36
Licence fees.....	675 00	750 00
Total revenue.....	\$ 351,783 78	\$ 318,792 36
<i>Expenditure—</i>		
Travelling expenses.....	\$ 283 81	\$ 210 14
Total revenue for branch.....	\$ 656,483 33	\$ 647,798 46
Total expenditures for branch.....	204,111 30	224,146 86
Surplus.....	\$ 452,372 03	\$ 423,651 60

As regards the Electricity and Gas Inspection Services, this statement shows a general increase over the previous year. There is an increase in the total number of meters tested of 30,410; in revenue of \$24,306.55; and in expenditure of \$20,109.21. The surplus of revenue over expenditure for the year amounts to \$105,069.38, an increase of \$4,197.34 over the previous year.

The amounts required to pay the salaries of the officers at headquarters at Ottawa and the rent, fuel and furniture for the Services as a whole do not enter into the calculations in arriving at the foregoing figures.

GAS INSPECTION SERVICE

The total number of meters tested for the year was 144,517, an increase of 10,356 over the previous year, of which number 39,816 were new meters. The number of meters in use on March 31, 1930, on manufactured gas was 520,788, an increase of 16,288 over the previous year.

The number of cubic feet of manufactured gas sold during the year was 18,418,879,100, an increase of 1,496,855,600 over the previous year. There were 3,646 calorific tests made throughout the Dominion of Canada, and the average heating value was found to be 492.8 B.T.U's per cubic foot. The standard required by regulation is 450 B.T.U's per cubic foot.

The production of natural gas continues to increase very rapidly. During the past year 31,880,844,600 cubic feet were supplied, an increase of 6,389,398,600 cubic feet. The number of meters in service on March 31, 1930, measuring natural gas was 118,390, an increase of 10,796.

During the year one prosecution was instituted for infraction of the Gas Inspection Act, the offence being the illegal use of a gas meter seal. A conviction was obtained and a fine imposed.

ELECTRICITY INSPECTION SERVICE

The work connected with this Service continues to increase. During the past year 345,052 meters were tested, an increase of 20,054 over the previous year. The number of new meters tested was 109,289, and the total number of meters in service on March 31, 1930, was approximately 1,582,000.

ELECTRICAL AND GAS STANDARDS LABORATORIES

The work performed in the laboratories in Ottawa, Winnipeg and Vancouver continues to play a very important part in the activities of the Electricity and Gas Inspection Services. The periodic calibration and checking of the inspection standards supplied to the outside Inspectors is particularly important and requires more painstaking work each year as the outside companies are more exacting in their demands for greater accuracy.

During the past year 122 rotating standards, 49 wattmeters, 26 voltmeters and 24 ammeters were checked for our own inspection service and for outside companies and other departments of the Government 14 rotating standards, 24 wattmeters, 15 voltmeters and 8 ammeters were checked.

In connection with the approval of meters for use in Canada, 42 electric meters and one gas meter were examined and tested, of which 15 electric meters and one gas meter were approved.

EXPORTATION OF ELECTRICAL ENERGY

During the past year the number of kilowatt hours produced for export was 1,497,106,389, a decrease of 107,105,887. This decrease is equivalent to 16,389 horse-power years. The revenue collected by virtue of the export duty and licence fees was \$318,792.36, and the expenditure was \$210.14.

Mail Subsidies and Steamship Subventions

The expenditure on mail subsidies and steamship Subventions during 1929-30, according to the secretary of the department, totalled \$1,083,436.48 as against \$1,026,375.14 in the previous year—an increase of \$57,061.34.

This amount is divided as follows:—

OCEAN SERVICES

Services on the Atlantic Ocean.....	\$ 224,583 26
Services on the Pacific Ocean.....	194,600 00
	<hr/>
	\$ 419,183 26

LOCAL SERVICES

<i>(a) Interprovincial Services—</i>	
(1) Between Quebec and New Brunswick.....	\$ 3,000 00
(2) Between Quebec, Prince Edward Island and Nova Scotia.....	5 0,000 00
(3) Between Nova Scotia and Prince Edward Island.....	35,000 00
(4) Between Nova Scotia and New Brunswick.....	49,000 00
	<hr/>
	\$ 137,000 00
<i>(b) Provincial Services—</i>	
(1) British Columbia.....	\$ 94,692 86
(2) New Brunswick.....	30,500 00
(3) Nova Scotia.....	184,078 97
(4) Ontario.....	11,000 00
(5) Prince Edward Island.....	5,000 00
(6) Quebec.....	197,687 50
	<hr/>
	\$ 522,959 33

In addition to these amounts, \$4,293.89 was expended in the inspection of subsidized services in Quebec and the Maritime provinces.

BRITISH COLUMBIA AND AUSTRALIA SERVICE

Towards the close of 1928 a number of requests were received by the department from British Columbia firms for the establishment of a subsidized freight steamship or motorship service, chiefly for the purpose of carrying lumber from British Columbia to Australia, and to develop Canadian business in that market.

These requests came from a number of British Columbia firms, and were strongly supported by British Columbia associations representing the timber trade, including the Associated Timber Exporters of Vancouver, the Timber Industries Council of British Columbia, and the Timber Holders' Association of British Columbia.

On May 14, 1929, a call for tenders was issued, for a service to commence in August 1929.

Six tenders were received, and the tender of the Australian British Columbia Shipping Co., Limited, of Vancouver, was accepted for a period of three years, commencing in August, 1929, at a subsidy of \$7,700 per trip, or \$92,400 per annum.

Up to the present date the results of this service have been exceedingly good. A sailing has been made each month, and each ship has been fully loaded, carrying from 4 to 4½ million feet of lumber, as well as small quantities of box shooks and other goods.

There is no doubt that if it had not been for this subsidized service the greater part of these cargoes would not have been exported to Australia at all.

OTHER OCEAN SERVICES

The freight services from Eastern Canada to Brazil, Uruguay and the Argentine; from Canada to South Africa; and from British Columbia to the British West Indies, continue to show excellent results.

COASTAL SERVICES

Grand Manan and the Mainland.—The new motorship *Grand Manan II*, was placed in service on February 22, 1930, as the result of a call for tenders in 1928, and the acceptance of the tender of the Grand Manan Steamboat Company, who built the *Grand Manan II* especially for the important coastal service between Grand Manan and the Mainland.

The new motorship is very comfortably fitted for passengers, and will carry a large quantity of freight, as well as a number of automobiles. Her speed is considerably in excess of the old *Grand Manan*, which was on this route for many years, and she is giving every satisfaction.

Sydney and Bay St. Lawrence.—The steamer *Aspy*, operated by the North Shore Steamship Company, on the Sydney and Bay St. Lawrence service, has increased her service to Bay St. Lawrence, as a result of new arrangements with the Department, and now makes two trips a week to that point throughout the season of navigation, instead of during the summer months only, as was the case in former years. This additional service was granted at an increased cost to the Government of \$7,000 per annum. It has been put into force as the result of strong representations made by the fishermen living in the small fishing villages in the northern part of Victoria county.

It was pointed out that the best fishing season along this coast is in the fall, and that both in the fall and in the spring two trips a week are urgently required for the carriage of fish and fishing supplies, and for the benefit of the residents in the coastal ports, who are entirely dependent upon the steamer for their communications.

These requests were supported by the Department of Fisheries, and the increased service went into force on December 9, 1929, and continued until January 1, 1930, when navigation closed.

A full service of two round trips a week will now be performed to Bay St. Lawrence throughout each season of navigation for a period of five years.

Mulgrave, Arichat and Petit de Grat.—On the *Mulgrave, Arichat and Petit de Grat* Service, the new motorship *Ile Madame* commenced to run on August 19, 1929. She is a vessel of 163 gross tons, specially constructed for the route, and capable of carrying 50 passengers and 125 tons of freight, and replaces the *Prince Albert*, which was crushed by ice on March 6, 1929.

The other coastal services subsidized by the department, which are 44 in number, continued their usual operations during the year, serving the coastal towns, villages and settlements of British Columbia, Quebec and the Maritime Provinces, and providing means for passenger, freight and mail communications between the small coastal ports and their sources of supply and markets in the larger centres of population.

Precious Metals Marking Act

Mr. W. J. Ryan, Inspector under the Precious Metals Marking Act, reports that throughout Canada the trade—particularly the jewelry trade—is becoming more familiar with the Precious Metals Marking Act and all its requirements, as is shown by the increased respect that is shown for it each succeeding year.

The few exceptions are those who are newcomers to Canada, whose business is done chiefly by mail order. This line of business is rapidly decreasing owing to the growth of departmental and chain stores throughout the country.

The large departmental stores handling so extensively the lines of merchandise that come within the Precious Metals Marking Act have expert merchandise managers, who have all been provided with copies of the Act and instructed by the general managers to adhere strictly to its requirements, and such instructions have been complied with satisfactorily.

There were but four prosecutions during the year for disregarding the Act. In each case the articles complained of were marked in such a manner as to mislead and deceive, and were all made outside of Canada. The four dealers were convicted and fined.

Since the Canadian manufacturers have shown their appreciation of the Act by respecting its every requirement, the Inspector of the Precious Metals Marking Act again recommends that a national mark be adopted by manufacturers, such mark to be applied to their product.

With such a mark the buying public would be protected by the Act, and could depend on the quality, particularly when they knew that only goods made in Canada could legally bear the National Mark.

Further, the adoption of a national mark for Canadian-made goods, the Inspector believes, would increase the number of employed in the production of same.

Bounties

BOUNTY PAID ON COPPER BARS

July 1, 1927 to June 30, 1928; 12,514,446 lbs. at $\frac{1}{2}$ c.	\$ 62,572 24
July 1, 1928 to June 30, 1929; 6,837,124 lbs. at $\frac{1}{2}$ c.	34,185 63
July 1, 1929 to June 30, 1930; 7,707,370 lbs. at $\frac{1}{2}$ c.	38,536 86

NOTE.—A claim for bounty on 1,849,298 pounds of copper bars amounting to \$9,246.49, which was received in June, 1930, is being held for adjustment and not included in the above statement.

BOUNTY PAID ON HEMP

Calendar year 1927, 203,087 lbs. at $1\frac{3}{4}$ c.	\$ 2,792 43
Calendar year 1928, 826,821 lbs. at $1\frac{3}{4}$ c.	10,335 25
Calendar year 1929, 666,113 lbs. at $1\frac{3}{4}$ c.	7,493 77

Revenue and Expenditure

Appended will be found the usual statements of revenue and expenditure of the department for the last fiscal year.

All of which is respectfully submitted.

F. C. T. O'HARA,
Deputy Minister.

REVENUE—DEPARTMENT OF TRADE AND COMMERCE

SUMMARY of the Revenue of the Department of Trade and Commerce for the Services indicated during a period of seventeen years, i.e., April 1, 1913 to March 31, 1930.

Fiscal Year	Canada Grain Act	Canadian Government Elevators	Weights and Measures (a)	Gas and Electricity	Electricity Exportation Act (b)	Culler's Fees (c)	Board of Grain Supervisors	War Trade Board	Canadian Government Picture Bureau	Patent Fees (d)	Miscel- laneous Revenue	Totals
	\$	\$	\$	\$	\$	\$	\$	\$	\$	\$	\$	\$
1913-14.....	402,639 87	107,494 14	—	—	—	1,799 40	—	—	—	—	14 78	511,993 19

(a) Prior to September, 1918, the Weights and Measures and Gas and Electricity Services were under the Department of Inland Revenue.

(b) The Electricity and Exportation Act was passed on April 27, 1907, but no export duty was imposed until April 1, 1925.

(c) Cullers Act abolished in 1921.

(d) Patent Office under Trade and Commerce during 1918-19—1919-20; and eight months during 1927-28.

(c)											

NOTES—

(a) This amount includes salaries and contingencies of the Patents, Copyrights and Trade Marks Branch, for eight months, April 1-Nov. 30, 1927, totalling \$119,626.74.
 (b) This item was reduced by refunds from the sale of pig iron, amounting to \$801,793.91.
 (c) The difference between this figure and that shown by the Auditor General's Report is \$4,805.39—"Civil Government Salaries," detailed under Health Department.
 (d) This amount covers the expenditures from December 1, 1927 to March 31, 1928.

MISCELLANEOUS for 1923-24 included the following:—
 Provisional Bonus Allowance.....
 Printing Parliamentary and Departmental Publications..... \$ 139,521 81
 Royal Commission to Inquire into Grain Trade..... 114,606 39
 Canadian Exhibition Train..... 120,212 01
 Japanese Relief..... 106,062 74
 Other Miscellaneous..... 182,369 65
 67,586 58

\$ 730,359 18

DEPARTMENT OF TRADE AND COMMERCE
OTTAWA, CANADA

HON. H. H. STEVENS, Minister

F. C. T. O'HARA, Deputy Minister

ANNUAL REPORT
OF THE
WEIGHTS AND MEASURES INSPECTION SERVICE

FOR THE FISCAL YEAR ENDING MARCH 31

1930

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1930

THE UNIVERSITY OF CHICAGO

THE UNIVERSITY OF CHICAGO

THE UNIVERSITY OF CHICAGO

THE UNIVERSITY OF CHICAGO

THE UNIVERSITY OF CHICAGO

REPORT OF THE INSPECTION OF WEIGHTS AND MEASURES

OTTAWA, July 20, 1930.

To the Honourable
The Minister of Trade and Commerce.

SIR,—I have the honour to submit the annual report on the Weights and Measures Inspection Service, together with statistical statements, for the fiscal year ended March 31, 1930.

F. C. T. O'HARA,
Deputy Minister

Mr. E. O. Way, Director of Weights and Measures, reports as follows:—

Compared with 1928-29, the revenue and expenditure for the fiscal year ending March 31st 1930, were as follows; details by districts and provinces being given in Appendix "A".

	1928-29	1929-30	Increase
	\$ cts.	\$ cts.	\$ cts.
Revenue.....	399,308 06	407,358 70	8,050 64
Expenditure.....	326,773 18	344,566 35	17,793 17
Surplus.....	72,534 88	62,792 35	

A better idea of the year's work is given by the following analysis of the revenue items.

	1928-29	1929-30
	\$ cts.	\$ cts.
Inspection fees.....	325,554 90	341,151 30
Portage.....	61,677 20	54,491 75
Special expenses.....	5,947 75	5,976 80
Adjusting fees.....	1,685 70	1,428 10
Post Office fees.....	2,500 00	2,500 00
Laboratory fees (Ottawa).....	1,881 20	1,700 40
Penalties.....	37 00	110 00
Casual revenue.....	24 31	0 35
	399,308 06	407,358 70

The above shows that inspection work proper increased by \$15,596.40, and that in spite of increased work and travelling, a reduction was made in the portage charge of \$7,185.45, or 11.6%, which represents that much saving in the cost of inspection to the trading community.

This may not appeal as a very great saving, but it does illustrate the line of progress studiously aimed at by the Service.

The current surplus of \$62,792.35 suggests that there is possibly room for yet further reductions in inspection charges, but it is worth pointing out that, following reorganization, it took the Service five years to eliminate an annual deficit that had repeated since Confederation, and another five years to attain the relatively small surplus of \$72,534.88 in 1928-29, which dropped last year to \$62,792.35. Weights and Measures conditions are neither fixed nor stable. New methods of handling commodities may increase or decrease inspectable equipment, and in view of the multiplicity of inspections, even small reductions mount up into large sums.

The cartage charge, it might be explained, is a flexible levy—authorized by Order in Council—to cover the cost of transporting and conveying the heavy equipment of Weights and Measures standards and test weights, through town and country, to each place of inspection, the charge made being proportional to the amount of work done and time occupied at each inspection and related, of course, to the cost of conveyance to the service.

During the year 1929-30, the miles travelled on field inspection alone, totalled 351,890.

STATISTICAL STATEMENT OF INSPECTIONS

The following table gives a statistical statement of the weights, measures, weighing and measuring machines and equipment, inspected during the year, of which a detailed analysis will be found in appendices B and C.

Articles	Submitted	Verified	Rejected	Percent. of Rejection
Weights.....(Dom.)	85,631	81,675	3,956	4.6
Weights.....(Metric)	1,214	1,195	19	1.5
Measures of Capacity.....(Dom.)	90,302	89,581	721	0.8
Measures of Length.....	11,696	11,561	135	1.1
Milk Cans.....	71,166	71,084	82	0.1
Ice Cream Containers.....	47,408	47,407	1
Measuring Devices.....	45,945	41,294	4,651	10.1
Tank Wagons.....	1,273	1,265	8	0.6
Babcock Glassware.....	34,354	34,008	346	1.0
Weighing Machines.....	185,720	165,090	20,630	11.1
Weighing Machines.....(Metric)	504	482	22	4.3
	575,213	544,642	30,571	

The above figures do not include the thousands of milk bottles or the glass bottles now used in the sale of lubricating oil at filling stations. Both classes of measures, however, are carefully supervised and checked by selective inspection throughout the country, to see that they conform to Canadian standards.

Measuring devices, mostly of the gasoline type, again show a considerable increase,—45,945 as against 39,209 last year. Actually the number is at least one-third greater, since so many pedestal machines at filling stations represent two complete ten gallon dispensers,—commonly known as Twin Tens, a “two in one” machine.

BABCOCK GLASSWARE

Babcock glassware, i.e. calibrated glassware used for making the butter fat test on milk and cream, is verified, and stamped by means of a Sand Blas machine, in the Weights and Measures Standards Branch at Ottawa. This glassware, unlike milk and oil bottles, is small and light, and of the nature of laboratory equipment.

The number of bottles and pipettes received for test totalled 34,354 as against 37,958 for 1928-29; the fees amounting to \$1,700.40 as against \$1,881.20 the previous year.

REJECTIONS

As complementary to the above table, the following figures submitted by the Belleville District, showing the number of machines, etc., adjusted by inspectors, offer one explanation for the apparent paucity of rejected or faulty equipment. The same service is of course rendered in every district, although similar statistical records are not kept; the total effect upon complete rejections being obviously considerable.

*(All destroyed).

In addition, 2,357 proportional weights belonging to platform and wagon scales were adjusted. Such weights, when incorrect, of necessity make the scales to which they belong incorrect.

SEIZURES AND PROSECUTIONS

The Canadian system of original inspection on all new production, whether Canadian made or imported, together with the holding by the Customs of all importations of Weights and Measures equipment for the approval of an Inspector before release to consignee, obviously affects seizures and prosecutions by keeping out faulty and illegal devices.

During the year there were only 50 seizures of faulty or fraudulent equipment.

In the latter class there were eight scales, seized for being set out of balance against the customer, and therefore "false and unjust". Prosecutions were instituted and convictions secured in each case.

Altogether, there were sixteen (16) prosecutions and 16 convictions, with fees amounting to \$110.00.

The problem of the unjust scale and its corollary—short weight—is becoming increasingly serious and must be dealt with accordingly. This phase of Weights and Measures work is more fully considered under Short Weight.

EXAMINATION—NEW MACHINES

During the year, twenty-four new machines or modifications of existing machines, were submitted to the Director's office for examination and approval. Of these, seventeen were approved and five rejected, whilst two stand as unfinished business.

In the field of measuring devices, the gasolene meter still holds the centre of interest. The main source of trouble seems to be to construct a meter that will correctly measure gasolene at varying rates of speed. The whole idea underlying the metering system is rapid service, but the Weights and Measures Inspection Service cannot consider a measuring device that is accurate at one speed only. The maximum speed seems to be five gallons in 25 to 30 seconds, but all cars cannot take gas at that speed. In the interest of accuracy and to ensure a reasonable refinement in construction, Weights and Measures has demanded a range of accuracy from full to half speed, and it is worth mentioning that that requirement has been more or less universally endorsed.

Many of the first installations have failed badly under the half speed test, with the result that manufacturers have turned to new designs of meters with increasingly satisfactory results.

WESTERN ELEVATOR SCALE INSPECTION

The introduction of the motor truck for hauling grain to country elevators has led to the replacing of the old 12,000 pound wagon scale with 20,000 pound truck scales, and raised the problem of making heavier tests on the larger scales. Here we have the fundamental problem underlying all Weights and Measures work, the transport and handling of adequate test loads, in acute form, because of the mileage to be covered and the primitive condition of most of the Prairie roads, too frequently impassable under adverse climatic conditions.

The two essential factors involved are, adequate test weights to verify the leverage or multiplication of the scale, and adequate load to test for strength and stability.

To this end, motor trucks have been introduced, carrying 2,000 pounds of test weights, as against 1,000 pounds heretofore, and it is gratifying to note that some of the elevator companies have already expressed their appreciation of these heavier and more efficient tests, notwithstanding it means more rejections and more repair work, a costly business over the wide range of the Prairies, for like the Inspector, the repair mechanic must also have his load of weights.

Consultations have been held with elevator interests with a view to finding some way to reduce this duplication, but, since an inspector cannot possibly wait while repairs are being made, it is difficult to find a solution, other than the reduction of rejections to a minimum by effective scale supervision, both as regards installation and maintenance, on the part of the elevator companies.

Incidentally, considerable attention is being given to devising some means of reducing the time and labour in shifting so many 50 pounds weights at each inspection. To this end experiments are being made with a small steel dolly-truck of 500 pounds on which 1,500 pounds of weights can be piled, making a movable test load of 2,000 pounds, and to date the results are reported as most encouraging. The dolly-trucks, however, are somewhat expensive and also require special tackle to load and unload on and off the truck. It remains to be seen if the economy they effect in conducting elevator, stock, and corporation scale inspections will justify equipping each of the Western inspectors with this mechanical facility.

COAL

Complaints continue to come to hand concerning serious discrepancies in car lot shipments of western coal. This is another large issue very difficult of solution, owing to the physical conditions involved.

One contributing cause of error, inaccurate tare-weights of box cars, has owing to successive Weights and Measures check ups at Edmonton and Calgary now been practically eliminated.

Last February and March 141 cars were tare weighed in Edmonton and of these

73 weighed more than the stencilled weight, averaging 236 pounds per car.
 35 weighed less than the stencilled weight, averaging 250 pounds per car.
 33 were correct.

In March, 31 cars were tare weighed in Calgary and of these

9 weighed more than the stencilled weight, averaging 171 pounds per car.
 11 weighed less than the stencilled weight, averaging 145 pounds per car.
 11 were found correct.

If a box car weighs more than its stencilled weight, short weight to the extent of the discrepancy results in the net weight of the contents.

Since serious discrepancies are still the subject of complaint, and since they exceed any possible scale error, the only inference to be drawn is that explanation of the discrepancies must be looked for in the methods of handling the coal. Coal is a crude product and it is crudely handled. The coal in question is friable, and slack is not treated with any great respect. There are present many causes of error, e.g. error in tare weights, aggravated by rain, snow, ice and uncleared cars, leakage and theft in transit, spillage in unloading, neglect to remove slack, error in unloading a car in team or truck lots, hurried weighing at point of origin, evaporation of moisture, etc.

The problem then is not one of scale accuracy and only partially of accurate weighing, but more in the nature of divided responsibility as between shipper and consignee, with reference to the methods used in handling a difficult commodity, an issue over which Weights and Measures can exercise no direct jurisdiction.

SHORT WEIGHT

In the retail world, short weight exists, in as far as it does exist, almost wholly as a practice, quite apart from the accuracy or inaccuracy of the inspected equipment used.

The insidious thing about short weight is that the quarter and the half ounce and even the ounce short, seem relatively too trivial to make a fuss about. In fact one can hardly escape the impression that the offence seems to be endowed with some sort of justification, a dangerous and mischievous idea that must be dispelled by resort to prosecution if plain warning fails, as it too often fails.

Whilst weight, measure, and money are practically interchangeable values, it is unfortunate that the average human mind misses this identity; that one ounce short at 32 cents per pound means 2 cents. The situation is further aggravated by the fact that nobody hesitates to challenge short change, even to a cent, yet the individual who challenges a shopkeeper or a clerk with short weight is somewhat of a rarity.

The problem is further complicated by the factor of evaporation or shrinkage, but as a general rule, short weight, as it exists, generally exceeds that attributable to this factor. Nevertheless, the whole intent and purpose of the Weights and Measures Act is to see that correct weight and correct measure are given and it is the duty of the trader to adapt and adjust his methods to conform with the law; not to adopt such methods as suit his own economic convenience and advantage, leaving weight and measure to take care of themselves.

During the year, six prosecutions were instituted for short weight under Section 63 of the Act, which provides that "Notwithstanding any of the provisions of the Criminal Code, any person who sells, delivers, or causes to be sold or delivered, anything by weight, measure or number, short of the quantity ordered or purchased, shall be guilty of an offence and liable to a fine not exceeding 25 dollars for the first offence and to a fine not exceeding 100 dollars for every subsequent offence".

In addition, eight weighing machines were seized because they had been set out of balance half an ounce or more against the customer, with the intent to commit short weight—such scales being false and unjust within the meaning of the Act.

Proceedings were entered and convictions secured against all the above cases.

Usually the minimum fine of \$5 and costs is inflicted. Occasionally the fine is \$25, but as evidence that the matter is being more seriously regarded it might be mentioned that just after the close of the year, a short weight conviction in Toronto, for a second offence, drew a penalty of \$50 and costs.

NET WEIGHT

Another form of short weight is to be found in package goods, and possibly the most interesting and at the same time the most important prosecution yet taken under the Weights and Measures Act was a case in Western Ontario for the sale of $15\frac{1}{2}$ ounces of tea in a wrapper that was found to weight $\frac{1}{2}$ ounce, making a one pound package.

The action taken in Ontario was strongly contested but after lengthy deliberation, the Magistrate convicted, thus establishing the principle of net weight.

The decision is momentous, for had it been otherwise, it would have opened the way to the use of heavier wrappers and containers than $\frac{1}{2}$ ounce and virtually destroyed the whole effectiveness of the intent and purpose of the Weights and Measures Act.

Lacking the competence to discuss the legal niceties of the issue, it may yet be said that the judgment holds no menace or anything detrimental to honest trade. On the contrary, the practical provisions of Weights and Measures regulations afford the trader ample margin for the use of reasonable bags and wrappers, in that all weights and measures equipment being mechanical, is allowed by the law what is known as a "toleration of error". That is to say, no device is expected to be so superfine that it can have no error.

Technically speaking, the sensitiveness of most scales will not respond to the weight of an ordinary paper bag of light strong paper. That is, a paper bag placed on the platter will, alone, not move the indicator, or if it does, but by an infinitesimal amount. That being so, the issue of net or gross weight does not arise, and reasonable bags and wrappers may be held not to conflict with the principle of accuracy underlying the Act, but if heavy bags and wrappers are used, such that they displace any appreciable quantity of the commodity being weighed, then the trader in the words of Section 63 of Chapter 212, R.S. 1927, is selling "less than the quantity ordered or purchased."

Concluding, it is only fair to offer some word of commendation on the industry, care and judgment exercised by the field inspectors in the conduct of duties of no mean difficulty, involving as they do individual contact with competitive interests and the exercise of firmness with scrupulous impartiality.

DEPARTMENT OF TRADE AND COMMERCE

OTTAWA, CANADA

HON. JAMES MALCOLM, Minister

F. C. T. O'HARA, Deputy Minister

ANNUAL REPORT

OF THE

ELECTRICITY AND GAS INSPECTION SERVICES

FOR THE FISCAL YEAR ENDING MARCH 31

1930

OTTAWA

F. A. ACLAND

PRINTER TO THE KING'S MOST EXCELLENT MAJESTY

1930

Applications for copies should be addressed to the King's Printer Ottawa

THE HISTORY AND GEOGRAPHY OF THE
NORTH AMERICAN CONTINENT

REPORT OF THE INSPECTION OF ELECTRICITY AND GAS

To the Honourable

OTTAWA, June 30, 1930.

The Minister of Trade and Commerce.

SIR,—I have the honour to submit the annual report on the Electricity and Gas Inspection Services, and also statements in connection therewith, for the fiscal year ended March 31, 1930.

F. C. T. O'HARA,
Deputy Minister.

ELECTRICITY AND GAS INSPECTION SERVICES

The fiscal year which ended on the 31st of March last was a record year in so far as the amount of work accomplished by the Electricity and Gas Inspection Services is concerned. The following statement gives a comparison of revenue and expenditure in the operation of these Services for the past two years. It also gives the revenue and expenditure connected with the administration of the Electricity and Fluid Exportation Act through the same period.

Electricity and Gas Inspection Acts—	1928-29	1929-30
Electricity meters tested.....	324,998	345,052
Gas meters tested.....	134,161	144,517
Total number of meters tested.....	459,159	489,569
Revenue—		
Electricity inspection.....	\$ 212,251 65	\$ 228,168 00
Gas inspection.....	92,447 90	100,838 10
Total revenue.....	\$ 304,699 55	\$ 329,006 10
Expenditure—		
Electricity inspection.....	\$ 143,790 81	\$ 162,866 61
Gas inspection.....	69,036 70	61,070 11
Total expenditure.....	\$ 203,827 51	\$ 223,936 72
Electricity and Fluid Exportation Act—		
Revenue—		
Export tax.....	\$ 351,103 78	\$ 318,042 36
Licence fees.....	675 00	750 00
Total revenue.....	\$ 351,783 78	\$ 318,792 36
Expenditure—		
Travelling expenses.....	\$ 283 81	\$ 210 14
Total revenue for branch.....	\$ 656,483 33	\$ 647,798 46
Total expenditures for branch.....	204,111 30	224,146 86
Surplus.....	\$ 452,372 03	\$ 423,651 60

The work of the Electricity and Gas Inspection Services for the fiscal year ended March 31st last constituted a record.

DEPARTMENT OF TRADE AND COMMERCE

As regards the Electricity and Gas Inspection Services this statement shows a general increase over the previous year. There is an increase in the total number of meters tested of 30,410; in revenue of \$24,306.55; and in expenditure of \$20,109.21. The surplus of revenue over expenditure for the year amounts to \$105,069.38, an increase of \$4,197.34 over the previous year.

The amounts required to pay the salaries of the officers at headquarters at Ottawa, and the rent, fuel and furniture for the Service as a whole do not enter into the calculations in arriving at the above figures.

GAS INSPECTION SERVICE

The Gas Inspection Service is conducted under the authority of the Gas Inspection Act, which requires that every gas meter used for ascertaining the quantity of gas supplied by any contractor to a purchaser shall be verified and sealed before it is installed for use. No meter shall be tested in Canada until the type of meter to which it belongs has been approved.

The total number of meters tested for the year was 144,517, an increase of 10,356 over the previous year, of which number 39,816 were new meters. The number of meters in use on March 31st, 1930, on manufactured gas was 520,788, an increase of 16,288 over the previous year.

The number of cubic feet of manufactured gas sold during the year was 18,418,879,100, an increase of 1,496,855,600 over the previous year. There were 3,646 calorific tests made throughout the Dominion of Canada, and the average heating value was found to be 492.8 B.T.U's per cubic foot.

The production of natural gas continues to increase very rapidly, the main increase being in the Turner Valley, near Calgary, Alberta. During the past year 31,880,844,600 cubic feet were supplied, an increase of 6,389,398,600 cubic feet. The number of meters in service on March 31st, 1930, measuring natural gas was 118,390, an increase of 10,796.

During the year one prosecution was instituted for infraction of the Gas Inspection Act, the offence being the illegal use of a gas meter seal. A conviction was obtained and fine imposed.

ELECTRICITY INSPECTION SERVICE

The Electricity Inspection Service is conducted under the authority of the Electricity Inspection Act and the organization set up to perform the work required by the Act is the same as that set up to perform the work required by the Gas Inspection Act. The same staff is responsible for the administration of the two Acts.

The Electricity Inspection Act defines a meter as, "An electric meter, and includes every kind of machine, apparatus or instrument used for making electrical measurements, and any device utilized for the purpose of obtaining the basis of a charge for electricity". No meter shall be admitted to verification in Canada until the type of meter to which it belongs has been approved.

In the event of a contractor or purchaser becoming dissatisfied with the condition or registration of his meter, he may have it tested by applying to an Inspector and following the procedure outlined in the Act.

The work connected with this Service continues to increase. During the past year 345,052 meters were tested, an increase of 20,054 over the previous year. The number of new meters tested was 109,289, and the total number of meters in service on March 31st, 1930, was approximately 1,582,600.

ELECTRICAL AND GAS STANDARDS LABORATORIES

The work performed in the laboratories in Ottawa, Winnipeg and Vancouver continues to play a very important part in the activities of the Electricity and Gas Inspection Services. The periodic calibration and checking of the

inspection standards supplied to the outside Inspectors is particularly important and requires more painstaking work each year as the outside companies are more exacting in their demands for greater accuracy.

During the past year 122 Rotating Standards, 49 Wattmeters, 26 Voltmeters and 24 Ammeters were checked for our own inspection service, and for outside companies and other departments of the Government 14 Rotating Standards, 24 Wattmeters, 15 Voltmeters and 8 Ammeters were checked.

In connection with the approval of meters for use in Canada, 42 electric meters and one gas meter were examined and tested, of which 15 electric meters and one gas meter were approved.

EXPORTATION OF ELECTRICAL ENERGY

The Electricity and Fluid Exportation Act is administered directly from the Head Office at Ottawa. Licences to export are granted under the authority of this Act by the Governor in Council. All meters measuring export power are checked at least once in every year.

During the past year the number of kilowatt hours produced for export was 1,497,106,389, a decrease of 107,105,887 as compared with the previous year. This decrease is equivalent to 16,389 horse-power years. The revenue collected by virtue of the export duty and licence fees was \$318,792.36 and the expenditure was \$210.14.

STAFF

During the year four new positions of Inspector of Electricity and Gas were created, all of which were filled by the Civil Service Commission following a competitive examination. A position of Special Meter and Transformer Tester was also created, which was filled by promotion. Three resignations were received during the year.

APPENDIX H

For purposes of inspection under the Electricity Inspection Act and the Gas Inspection Act the provinces of the Dominion have been divided into the following districts:—

Prince Edward Island—Charlottetown.

Nova Scotia—Halifax.

New Brunswick—St. John.

Quebec—Quebec, Three Rivers, and Montreal.

Ontario—Ottawa, Belleville, Toronto, Hamilton, London, Sudbury and Fort William.

Manitoba—Winnipeg.

Saskatchewan—Regina.

Alberta—Calgary and Edmonton.

British Columbia—Nelson, Vancouver and Victoria.

REPORT OF THE BOARD

BOARD OF GRAIN COMMISSIONERS FOR CANADA

WINNIPEG, January 21, 1931.

The Hon. H. H. STEVENS, M.P.,
Minister of Trade and Commerce,
Ottawa, Canada.

SIR,—The present Board of Grain Commissioners was appointed on August 29, 1929, and this report is the first, therefore, to cover a full year of its activities in discharge of its duties under the Canada Grain Act.

On assuming office the board was instructed by the Minister of Trade and Commerce to carry out a complete revision and consolidation of the existing statute and was authorized to secure the services of Col. O. M. Biggar, K.C., of Ottawa, for the work of redrafting the Act.

A complete study of the whole question of grain handling as regulated by the Canada Grain Act was therefore made, consideration also being given to the Report of the Royal Grain Inquiry Commission, 1923, the Brown Commission Report, 1928, and also the evidence given before the Select Standing Committee on Agriculture in the House of Commons, 1929 session, together with recommendations made by that committee. Conferences were held from time to time between the various interests and the board with a view to ironing out possible divergencies of opinion as to the effect of the proposed legislation, and most of the debatable points were ironed out before the legislation was submitted to the minister. The Act passed the House and the Senate on May 27, 1930, and came into effect by Proclamation of His Excellency the Governor General of Canada on September 1, 1930.

CHANGES BROUGHT ABOUT BY NEW ACT

While the Act was in the main a revision and consolidation of existing legislation, there were some changes brought about which have proved to be quite satisfactory both from an administrative and an operating standpoint.

ADMINISTRATION

The Act sets out very clearly the powers and duties of the board and permits it to deal with the practical operation of the trade by regulation, a much more elastic means of control than statutory enactment. These regulations, however, of necessity are consistent with the Act and while they may permit of adjustment of detail from time to time, do not relieve the board of responsibilities, imposed upon it by the Act, the chief advantage being the clarification of the board's position and its ability to enforce the regulations and legislation.

For the first time, this year the board has had assistant commissioners, located in the three Prairie Provinces and at Fort William. At the request of the minister, the board, after interviewing all applicants, recommended the following for these appointments, which were approved by Order in Council:—

For Alberta: Mr. W. H. Blatchford.

For Saskatchewan: Mr. R. S. Dundas.

For Manitoba: Mr. T. J. Harrison.

For Fort William: Mr. Jas. Robinson.

We regret to record the death of Mr. Jas. Robinson on October 6, 1929, and he was succeeded in office by Mr. F. J. Rathbone.

These appointments under the Act authorized the board to delegate such authority as they saw fit to these gentlemen, and they have been given substantially the powers of a commissioner, only limiting them to the particular sphere of their operations in each province, the board retaining in its own hands the final disposal of all cases.

The work of the assistant commissioners will be dealt with more fully subsequently.

The appointment of Mr. Rathbone to the position of Assistant Commissioner at Fort William left the position of secretary open, and Mr. John Rayner was promoted by the Civil Service Commission to this appointment.

In previous legislation the headquarters of the board were at Fort William. Under the 1929 Act the Board was given discretion as to where these head offices would be located. It was with much regret that the board decided that for the proper and efficient carrying on of its duties it was necessary to be in Winnipeg, and it was with great reluctance that it therefore had to sever its connections with the city of Fort William which had been current since the inauguration of the board, making Winnipeg its head office.

One of the principal changes in the Act and one which is beneficial to the trade generally has been the complete registration of terminal documents by the board. It was the practice under the previous board to register terminal warehouse receipts as to weight only. We now register these documents as to weight and grade and these documents are a first charge with the exception of liens established for handling and freight consonant with the Act. It is necessary for a borrower of money against terminal stocks to have in his possession terminal warehouse receipts as these documents are the only means he has of giving security on his grain.

A further problem connected with terminal elevator receipts developed out of the delay in the movement of grain from terminal points into consumption or export during 1930. Up until 1930 the custom was that storage on grain was paid when the elevator receipts changed ownership, but in that year terminal elevator companies found that they were carrying large stocks of grain for periods extending beyond one year, upon which they were unable to collect storage. This undoubtedly created a financial hardship upon these companies. As a result, a new form of warehouse receipt has been approved. This receipt provides that storage in arrears against grain in excess of thirty (30) days shall be paid twice a year, on February 15 and on August 15, at the office of the issuing company.

Under the amendments of 1929 to the Act the prohibition of mixing in One Hard, One, Two and Three Northern was effective on August 1, 1930. This legislation was continued in the present Act, and the binning of these grades is controlled by the board through its registration of documents, a simple, inexpensive and obvious means of doing so.

GRAIN STANDARDS COMMITTEES

These old established committees have been recast and modernized to meet the present situation. The Grain Standards Board for the Eastern Division, which was eliminated in the 1929 amendments, has been re-established and is under the supervision of the board.

The setting of standards has been dealt with in a practical way. There is a primary inspection standard which is used to grade farmers' grain, and an outturn standard which is used for all grain leaving terminal points. The introduction of the outturn standard has had a beneficial effect on our shipments and is, in the board's opinion, a practical means of assurance that the export standards of Canadian grain will maintain their high quality.

The preparation of the general standards for all grains, embodied in the Act, was the work of an expert committee of inspectors under the charge of the chief inspector and they succeeded in eliminating a great deal of the multiplicity of grades which had gradually crept in to the work of the department.

These are the major changes made in the legislation and the change in practice involved has come into being with a minimum of disturbance to the trade generally and we have so far encountered no difficulty in administration which has proved insurmountable.

PREPARATION OF A HAND BOOK

The Agricultural Committee of Parliament in 1929 recommended the publication of a handbook which would make available to the grain grower in simple terms the main provisions of the Canada Grain Act. Such a handbook has been prepared by the board and is now in the press.

TARIFF SESSIONS

Maximum tariffs covering country elevator charges and terminal charges for points in Alberta, Saskatchewan, Manitoba and Ontario as far east as Fort William-Port Arthur, were approved at an open session of the board held in Winnipeg on August 7 of 1930. A similar session was held on August 20 of 1930 to approve of the maximum tariffs for elevators on the Pacific coast.

The board has initiated the practice of also holding an annual tariff session in the city of Toronto to approve of minimum tariffs for eastern elevators. This session was held this year on September 3.

In this connection it is to be noted that, pursuant to provisions of the Canada Grain Act of 1930, all eastern elevators, whether operated by private interests or public bodies such as Board of Harbour Commissioners, have applied for and received licences from the board.

SETTING OF THE GRAIN STANDARDS

With a view to setting the standards for the crop year of 1930-31 as early as possible, the board called the Western Grain Standards Committee together at Winnipeg on September 17 and 18 of 1930, when standards for western grain were selected, and settled as far as it was possible to do so. At a subsequent meeting on November 17, the work was completed by the establishment of standard grades not previously dealt with.

The standards for eastern grain were settled at meetings of the eastern Standards Committee held in Toronto on November 20 and in Montreal on November 21. Commissioner Hamilton represented the Board at the meetings of the Eastern Committee.

SUSPENSION OF THE COASTAL LAWS ON THE GREAT LAKES

At a public meeting held in the council room of the Winnipeg Grain Exchange on October 30 of 1930, the question was discussed whether there was ground for a recommendation to suspend, temporarily, the Canadian coastal laws on the Great Lakes, to permit vessels not otherwise entitled to load Canadian grain for winter storage. The meeting disclosed no demand for a suspension of the coastal laws. It was reported that there were sufficient Canadian boats to take care of any business that might offer. Following the precedent of last year, the board made no recommendation that the Canadian coastal laws on the Great Lakes should be suspended to permit other than Canadian vessels to load Canadian grain for winter storage.

COUNSEL

Mr. Travers Sweatman, K.C., has been appointed legal counsel to the board vice Mr. A. B. Hudson, K.C., resigned.

ASSISTANT COMMISSIONERS

The four assistant commissioners, to whose appointment reference has been made previously, have been of great assistance to the board. Owing to the very large establishment maintained at Fort William the work of Mr. F. J. Rathbone and for which he is very fully qualified by reason of his long association with the department, has been largely administrative. The assistant commissioners located on the prairies, in Alberta, Saskatchewan and Manitoba, have relieved the board from a great deal of travelling and left them free to attend to their executive and administrative duties.

The method of dealing with the assistant commissioners has been largely experimental in view of the fact that the appointment was a new departure. The assistant commissioners are delegated their powers by the board who have authority under the Act to endow them with similar powers as a commissioner. We have granted the necessary powers to each assistant commissioner, limiting these powers, however, to the province in which he is located. The assistant commissioners in their respective spheres deal with complaints under the Canada Grain Act received from farmers or others, compile the evidence in proper form and forward it to the board together with their recommendations. Before accepting such recommendations the case is completely reviewed by the board and order issued disposing of the same as finally determined. The assistant commissioners have instructions on receipt of a complaint to at once proceed to the place where the alleged irregularity occurred and personally investigate first-hand the circumstances. If he is of the opinion that the complaint is justified and a settlement cannot be arranged he recommends to the board that the matter be dealt with formally. The board then issues the necessary authority for a formal investigation. The evidence is taken on oath, transcribed and forwarded to the board with the recommendation of the assistant commissioner who sat on the case. Before accepting the recommendation of the assistant commissioner the board reviews all the evidences and circumstances of the case and issues an order disposing of the same.

During the year under review we have issued seven (7) orders disposing of seven (7) inquiries. No appeals have been made, as permitted under the Act, against any order.

Assistant commissioners are fully aware of the importance of prompt attention and the expeditious handling of cases which while they usually concern small sums of money at the same time are of great importance to the individual complainant, and that it is important to deal with them while the evidence is fresh and the necessary witnesses available.

The number of cases dealt with are referred to in detail in appendix "A" attached to the secretary's report.

Where a farmer lays a complaint in connection with some grain matter which does not come within the purview of the board the assistant commissioners have made it a practice to offer the services of the board with a view to arranging an amicable settlement in connection therewith.

We believe that the system is working out very satisfactorily and that the appointments fill a long felt want on the part of the Board of Grain Commissioners.

DOMINION GRAIN RESEARCH LABORATORY

During the year the work of the laboratory has been continued along the same lines as indicated in previous annual reports. The chief inspector has been furnished from time to time, as occasion demanded, with information relating to the quality of the various types and varieties of wheat, the effect of different forms of damaged flax on the amount and quality of the oil produced therefrom, and quality of wheat dried at various elevators under different conditions, and many other related problems. Special reports were prepared for the three meetings of the Grain Standards Committee, and loaves exhibited illustrating the special points to which it was desired that particular attention should be drawn.

A number of special investigations have been undertaken on instructions from the board, and a certain amount of co-operative work carried out with other departments of the Government.

The full report of the chemist in charge, Dr. F. J. Birchard, is the subject of a separate report which we recommend to publish separately.

STAFF

The retirement of Mr. J. G. White, after sixteen (16) years of important and valuable service under the board, was followed by the promotion of S. M. Capon, Weighmaster at Vancouver, to this position.

We have to record the retirement of Mr. Fred Symes, Inspector, Grade 2, in charge at Fort William on superannuation after thirty years of valued service.

The small crop of 1929 made necessary certain reductions in the staff employed by the board, especially in connection with the services of inspection and weighing. Having regard both to the existing trade depression and to maintaining an organization intact, necessary for future requirements, the Board made an effort to retain as many experienced employees as possible, even though the amount of work available during part of the season was limited.

In presenting its annual report and the reports of its principal officers, which are attached hereto, the Board wishes to pay tribute to the cordial co-operation it has received from all its employees in maintaining the services for which it is responsible.

Respectfully Submitted,

E. B. RAMSAY,
Chief Commissioner.

D. A. MACGIBBON,
Commissioner.

C. M. HAMILTON,
Commissioner.

APPENDIX I

THE GRAIN STANDARDS BOARDS

A meeting of the Western Grain Standards Board as constituted under the Canada Grain Act, 1925, as amended 1929, was convened at Winnipeg by the board on January 10, 1930, to consider the schedule of grades and grouping thereof prepared by the board for inclusion in the new Canada Grain Act then being drawn up.

The following members of the committee were in attendance: Messrs. K. Campbell, E. B. Ramsay, D. A. MacGibbon, C. M. Hamilton, Geo. Serls, J. D. Fraser, Geo. Hill, C. R. Manahan, F. J. Birchard, Geo. Bennett, J. Wellbelove, A. E. Wilson, H. Sellars, W. McLeod, W. H. Boyle, J. D. Read, J. H. Robson, P. V. Wright, R. C. Steele (substitute for R. H. Mahoney), L. H. Newman, and T. J. Harrison.

Mr. W. H. Fairfield was unable to attend the meeting, as was also Dean Rutherford who submitted by letter certain recommendations regarding the details of grain grades outlined in the schedule sent to him.

Mr. J. D. Fraser, Chief Inspector of Grain, explained the schedule, item by item.

Dr. F. J. Birchard, Chemist in Charge, Dominion Grain Research Laboratory, addressed the meeting and afforded verbal information regarding the chemical baking tests of wheat samples having the character of the samples selected and representing those outlined in the schedule submitted. This information being accompanied by samples of bread baked from flour ground from the samples referred to above.

The schedule as prepared by the board was approved by the meeting with slight modifications and the amended schedule was the basis of the statutory definitions of Western Grain embodied in the Canada Grain Act, 1930.

J. RAYNER,

Secretary, Board of Grain Commissioners.

COMMITTEES ON GRAIN STANDARDS

Committees on Grain Standards to replace the Grain Standards Boards were constituted by the board in accordance with section 25 of the Canada Grain Act, 1930, for the crop year 1930-31 as follows:—

COMMITTEE ON WESTERN GRAIN STANDARDS

E. B. Ramsay, Chief Commissioner, Board of Grain Commissioners.

D. A. MacGibbon, Commissioner, Board of Grain Commissioners.

C. M. Hamilton, Commissioner, Board of Grain Commissioners.

J. D. Fraser, Chief Grain Inspector, Board of Grain Commissioners.

George Serls, Chairman, Grain Appeal Tribunal, Winnipeg.

George Hill, Chairman, Grain Appeal Tribunal, Calgary.

C. R. Manahan, Chairman, Grain Appeal Tribunal, Edmonton.

Dr. F. J. Birchard, Chemist in Charge, Dominion Grain Research Laboratory.

L. H. Newman, Dominion Cerealists, Department of Agriculture.
 H. Sellers, Representing the Millers.
 W. H. Boyle, Representing Grain Growers in Alberta.
 George Bennett, Representing Grain Growers in Alberta.
 W. McLeod, Representing Grain Growers in Alberta.
 W. H. Fairfield, Representing Grain Growers in Alberta.
 Dean A. M. Shaw, Representing Grain Growers in Saskatchewan.
 J. Wellbelove, Representing Grain Growers in Saskatchewan.
 J. D. Read, Representing Grain Growers in Saskatchewan.
 J. H. Robson, Representing Grain Growers in Saskatchewan.
 A. E. Wilson, Representing Grain Growers in Saskatchewan.
 P. V. Wright, Representing Grain Growers in Manitoba.
 R. M. Mahoney, Representing Grain Growers in Manitoba.
 G. P. McRostie, Representing Grain Growers in Manitoba.
 K. Campbell, Representing Grain Growers in British Columbia.

Dr. C. N. Bell, Secretary

COMMITTEE ON EASTERN GRAIN STANDARDS

E. B. Ramsay, Chief Commissioner, Board of Grain Commissioners.
 C. M. Hamilton, Commissioner, Board of Grain Commissioners.
 N. Wight, Representing the Montreal Board of Trade.
 A. O. Hogg, Representing the Toronto Board of Trade.
 T. A. Climo, Representing the Exporters of Grain.
 C. B. Watts and G. H. G. Short, Representing the Millers of Wheat in the Eastern Division.
 H. A. Gilroy, Representing Grain Growers in Ontario.
 J. J. Page, Representing Grain Growers in Ontario.
 J. M. Vilke, Additional.
 E. D. Sullivan, Additional.
 A. A. Bowen, Additional.

F. D. Tolchard, Secretary at Toronto

H. C. Beatty, Secretary at Montreal

Meetings of these committees were convened by the board as follows:—
 Western Committee at Winnipeg, September 17, 1930 and November 17, 1930.

Eastern Committee at Toronto and Montreal on November 20 and 21, 1930, respectively.

WINNIPEG, Man., September 17, 1930.

MINUTES OF THE MEETING OF THE COMMITTEE ON WESTERN GRAIN STANDARDS HELD IN WINNIPEG, SEPTEMBER 17, 1930, AT 10.30 A.M.

PRESENT: Messrs. E. B. Ramsay, Chief Commissioner; D. A. MacGibbon, Commissioner; C. M. Hamilton, Commissioner; H. Sellers, A. M. Shaw, J. Wellbelove, J. D. Read, J. H. Robson, A. E. Wilson, Wm. McLeod, W. H. Boyle, Geo. Bennett, W. H. Fairfield, P. V. Wright, Dr. C. P. McRostie, R. M. Mahoney, K. Campbell, J. D. Fraser, Dr. F. J. Birchard, L. H. Newman, Geo. Serls, Geo. Hill, C. R. Manahan, and C. N. Bell, Secretary.

Meeting was called to order by Mr. E. B. Ramsay, in the chair.

All members, as required by the Grain Act, filed their oaths of office.

Notice of meeting as sent to members was read, and the minutes of the last meeting were read and confirmed.

Mr. Ramsay suggested that the meeting choose a member to act as chairman in case of his absence from the meeting. Mr. K. Campbell was named as acting chairman, and Mr. Ramsay confirmed the nomination.

The chairman called on Mr. J. D. Fraser, Chief Grain Inspector, to give information in regard to the grain samples secured for this meeting, the grading of Garnet wheat; the percentage of Red Winter wheat inspected. A general informal and conversational discussion followed, Mr. Fraser and Dr. Birchard answering questions asked by members.

Mr. L. H. Newman, by request, addressed the meeting on the subject of Garnet, Reward and other wheats, and his experience thereon, and answered questions of members.

Mr. Ramsay, in conclusion, stated that he took it as the concensus of opinion of the meeting that the course at present pursued in the grading of Garnet wheat be continued for the present crop. No member opposed this conclusion.

A letter from the Saskatchewan Co-operative Wheat Producers, dated April 2, 1930, recommending that an additional grade be inserted between 3 Northern and the present No. 6 wheat, also that the committee give consideration to setting up a Tough and Moist grade to replace the present Tough grade, was read. On consideration of this letter, no motion followed, and the letter was tabled.

The meeting then adjourned until 1.45 p.m.

Meeting resumed in the grain inspection room, and during the afternoon viewed the samples submitted and adopted the following:—

- No. 1 C.W. Amber Durum Wheat.
- No. 2 C.W. Amber Durum Wheat.
- No. 3 C.W. Amber Durum Wheat.
- No. 3 Extra C.W. Six-rowed Barley.
- No. 3 Extra C.W. Trebi Barley.
- No. 3 C.W. Barley.
- No. 4 C.W. Barley.
- No. 5 C.W. Barley.
- No. 6 C.W. Barley.
- No. 1 C.W. Rye.
- No. 2 C.W. Rye.
- No. 3 C.W. Rye.
- No. 1 White Spring Wheat.
- No. 2 White Spring Wheat.
- No. 3 White Spring Wheat.

On motion the above samples were established as the official standards.

The meeting then adjourned to meet at 10 a.m. to-morrow in the grain inspection room.

THURSDAY, September 18, 1930.

The meeting was called to order at 10 a.m., when Dr. Birchard reported on the milling and baking tests of the tentative standard samples, 1 Hard to No. 6 wheat, answering questions of members, and generally affording information after members had viewed the samples of bread baked from the flour produced from the said tentative samples.

The tentative samples submitted by the Chief Grain Inspector were examined and on motion the samples of 1 Hard and 1 and 2 Northern wheat were adopted as the standards.

Motion by R. M. Mahoney and A. E. Wilson: "That the information in possession of this Standards Committee is not sufficient to enable them to select standard samples at the present time for Grades 3 and 4 Northern wheat."

The motion was carried by unanimous vote.

A motion was passed adopting standard samples for Nos. 4, 5, and 6 Wheat Specials. Moved by A. E. Wilson and J. D. Read:—

"The information in the possession of this Standards Committee is not sufficient to enable them to select standard samples at the present time for Nos. 5 and 6 wheat."

Motion carried.

Standard samples for No. 1 Hard, No. 1 and 2 Northern export grades, were selected and established.

Moved by J. D. Read and A. E. Wilson:—

"That wheat with moisture content sufficient to be classed as 'Tough' as at present, be divided into two classes, as follows:—

"(1) Wheat containing more moisture than is permitted in the straight grades, up to and including 15·5 per cent, be graded 'Tough' according to the grade it is entitled to.

"(2) Wheat containing over 15·5 per cent moisture up to the limit allowed in the present tough grades, to be graded as 'Moist'."

On the above motion being put to the meeting for vote, it was declared to be lost.

On motion the following were appointed as sub-committee "to define special Commercial Grades," viz: one member of the Board of Grain Commissioners, the Chief Inspector, Geo. Serls, Chairman of the Grain Appeal Tribunal, Dr. Birchard, Chief Chemist, R. M. Mahoney and A. E. Wilson.

The statement of the Chief Grain Inspector defining the grading of feed wheat, was, on motion of Messrs. Wilson and Mahoney, approved.

The meeting then adjourned.

(Signed) C. N. BELL,
Secretary.

WINNIPEG, MAN., November 17, 1930.

MINUTES OF THE MEETING OF THE WESTERN GRAIN STANDARDS COMMITTEE, HELD THIS DAY AT 10 A.M. IN THE BOARD ROOM, GRAIN EXCHANGE BUILDING

Present: Messrs. E. B. Ramsay, Chief Commissioner; C. M. Hamilton, Geo. Serls, J. D. Fraser, Geo. Hill, C. R. Manahan, Geo. Bennett, J. Wellbelove, A. E. Wilson, Wm. McLeod, W. H. Boyle, H. Sellers, J. H. Robson, P. V. Wright, K. Campbell, R. M. Mahoney, S. C. Swanton (substitute for J. D. Read).

Mr. Ramsay took the chair and announced that as this was a continuance of the meeting held on the 17th and 18th of September last, it was not necessary to read the minutes of that meeting.

In the absence of Dr. Birchard, Chief Chemist, his assistant Mr. Aikin, read a report on this wheat crop, as tested in the laboratory. He also presented loaves of bread, being the result of the milling and baking tests, and the same were inspected by the meeting. After many questions of details of the grading and

milling tests of the wheat so far inspected, were answered by Chief Inspector Fraser and Mr. Aikin, the meeting then adjourned to the Grain Inspection Department, where the following standards were selected and established, viz:—

- No. 3 Northern Wheat.
- No. 3 Northern Export or Outturn Wheat.
- No. 4 Northern Wheat.
- No. 4 Northern Export or Outturn Wheat.

Meeting adjourned from 12.30 to 2 p.m. and on reassembling, the following standards were selected and established, viz:—

- No. 5 Wheat.
- No. 5 Export or Outturn Wheat.
- No. 6 Sample adopted as the minimum, and if found necessary the committee appointed at the meeting on September 18, 1930, shall meet and select a standard for No. 6 Wheat.
- No. 2 C.W. Oats.
- No. 3 C.W. Oats.
- No. 1 Feed Oats.
- No. 2 Feed Oats.
- No. 1 C.W. Flax.
- No. 2 C.W. Flax.

A schedule of classification for "Off Grade Grain" drawn up by the Chief Grain Inspector, and in addition, a schedule for "Separations for Cereal Grains," were submitted by the chairman, and having been read, clause by clause, were adopted. (Attached.)

A telegram from the annual meeting of the Saskatchewan Wheat Pool, Regina, favouring a division of the moisture content, was read and discussed, and it was agreed that the Board of Grain Commissioners be requested to have the terminals and the officers of the board investigate, and ascertain the keeping qualities of Tough and Damp grain.

On motion, the board was requested to publish the report of the Chief Chemist on the milling and baking tests of wheat as submitted at this meeting.

On motion, the committee appointed to define if found necessary, the special Commercial Grades, was continued.

The meeting then adjourned.

(Signed) C. N. BELL,
Secretary.

MINUTES OF MEETING OF THE EASTERN COMMITTEE ON GRAIN STANDARDS HELD IN THE CITY OF TORONTO, THURSDAY, NOVEMBER 20, 1930

Present: Commissioner C. M. Hamilton, Board of Grain Commissioners, and Messrs. A. A. Bowen, T. A. Climo, H. A. Gilroy, A. O. Hogg, J. J. Page, E. D. Sullivan, J. M. Vittie and C. B. Watts.

The following officials of the Board of Grain Commissioners were also present: Mr James D. Fraser, Chief Inspector of Grain, and Mr. J. Rayner, Secretary to the Board.

The meeting convened in the Council Chamber of the Toronto Board of Trade, Royal Bank building, at 10 a.m. with Commissioner C. M. Hamilton acting as chairman, and Mr. F. D. Tolchard acting as secretary.

NOTICE OF MEETING

Mr. J. Rayner, Secretary to the Board of Grain Commissioners, read the notice calling the meeting, issued by the Board of Grain Commissioners for Canada from Winnipeg, under date of November 5.

OATHS OF OFFICE

Mr. Rayner reported that the oaths of office duly completed had been received from all members of the Eastern Committee on Grain Standards with the exception of Mr. C. H. G. Short of Montreal, who was absent in Europe.

The committee then adjourned to the office of the Grain Inspector, 28 Front Street East, Toronto, to select and settle the standard samples to be used in the current crop year in connection with the grading of grain in the Eastern Division as authorized by sections 24 and 25 of the Canada Grain Act, 1930.

The committee examined the samples submitted by the Grain Inspector and standard samples were set for the following grades:—

No. 1 White Winter Wheat.

No. 2 White Winter Wheat.

No. 3 Winter Wheat.

No. 1 Commercial Wheat.

No. 2 Commercial Wheat.

No. 1 Red Winter Wheat.

No. 2 Red Winter Wheat.

No. 1 Mixed Winter Wheat.

No. 2 Mixed Winter Wheat.

No. 1 White Oats.

No. 2 White Oats.

No. 3 White Oats.

No. 1 Rye.

No. 2 Rye.

No. 1 Barley.

No. 2 Barley.

No. 3 Extra Barley.

No. 3 Barley.

No. 4 Barley.

No. 2 Peas.

No. 1 Marrowfat Peas.

No. 1 White Peas.

No. 2 White Peas.

No. 2 Buckwheat.

In view of the absence of suitable samples of grain, the committee resolved that the selection and settling of the standard samples of the following grains be deferred:—

Spring Wheat.

Goose Wheat.

No. 4 Winter Wheat.

No. 1 White Corn.

No. 2 White Corn.

No. 1 Yellow Corn.

No. 2 Yellow Corn.

No. 3 Yellow Corn.

No. 1 Mixed Grain.

No. 2 Mixed Grain.

No. 3 Mixed Grain.

No. 4 White Oats.

No. 1 Black Oats.

No. 2 Black Oats.

No. 3 Black Oats.

No. 4 Black Oats.

No. 1 Mixed Oats.

No. 2 Mixed Oats.

No. 3 Mixed Oats.

No. 4 Mixed Oats.

No. 1 White Clipped Oats.

No. 2 Clipped Oats.

No. 3 Clipped Oats.

No. 4 Clipped Oats.

No. 3 Rye.

No. 4 Rye.

No. 1 Peas.

No. 3 Peas.

No. 2 Marrowfat Peas.

No. 3 Marrowfat Peas.

No. 3 White Peas.

No. 1 Mixed Peas.

No. 2 Mixed Peas.

No. 3 Mixed Peas.

No. 1 Buckwheat.

No. 3 Buckwheat.

No. 4 Buckwheat.

MOISTURE CONTENT BUCKWHEAT

It was moved by Mr. A. O. Hogg and seconded by Mr. E. D. Sullivan, that the Eastern Grain Standards Committee recommend that the moisture test

on straight grades of buckwheat be not more than 16 per cent and that all buckwheat having a moisture content of over 16 per cent shall be classed as tough.

Further, that all such buckwheat shall be graded and designated according to the grade requirements of the standards applicable to such buckwheat if it were not tough, and the word "tough" shall be made the first word of the grade designation.

The committee then adjourned to meet at the office of the Board of Trade, Montreal, at 10 a.m. Friday, November 21.

(Signed) F. D. TOLCHARD,
Secretary.

MINUTES OF AN ADJOURNED MEETING OF THE EASTERN COMMITTEE ON GRAIN STANDARDS HELD IN MONTREAL ON FRIDAY, NOVEMBER 21, 1930

The meeting convened at 10.05 a.m. in the Council Chamber, Board of Trade building, Montreal.

The following members of the committee were present: Messrs. C. M. Hamilton, Commissioner, Board of Grain Commissioners; A. A. Bowen, T. A. Climo, H. A. Gilroy, J. J. Page, E. J. Sullivan, C. B. Watts, J. M. Vittie, N. Wight, and H. C. Beatty, Secretary.

The following officials of the Board of Grain Commissioners were also in attendance: Messrs. J. D. Fraser, Chief Inspector of Grain, and J. Rayner, Secretary, Board of Grain Commissioners.

Commissioner C. M. Hamilton acted as chairman of the meeting and Mr. H. C. Beatty as secretary.

The chairman explained to the meeting that the purpose of the meeting was to set standard samples of United States grain passing through Montreal and standard samples for any grades of Canadian grain grown in the Eastern Division, samples of which were not available in Toronto, but which samples might be available in Montreal.

MOISTURE CONTENT BUCKWHEAT

Mr. C. B. Watts addressed the meeting on the question of the moisture content of buckwheat and after some discussion moved that the resolution passed by the committee at Toronto on November 20 be modified to read that buckwheat containing over 19 per cent moisture be graded "damp." There was no seconder for this motion.

The meeting then adjourned to the office of the Grain Inspector, St. Nicholas building.

The committee examined the samples submitted by the Grain Inspector and standard samples were set for the following grades:—

Grain of U.S.A. Origin—

No. 1 Hard Winter Wheat.	No. 2 Amber Durum Wheat.
No. 2 Hard Winter Wheat.	No. 2 Mixed Durum Wheat.
No. 3 Hard Winter Wheat.	No. 2 Rye Western.
No. 2 Red Durum Wheat.	

Grain Grown in Eastern Division—

No. 4 White Oats.

APPEAL TRIBUNAL, TORONTO

It was pointed out by Mr. Gilroy that in the constitution of the Appeal Tribunal at Toronto no representative of the growers had been appointed.

It was moved by E. J. Sullivan and seconded by J. J. Page, that recommendation be forwarded to the Board of Grain Commissioners that Mr. Gilroy be appointed to this tribunal.

This resolution was passed by the committee.

The meeting then adjourned.

(Signed) H. C. BEATTY,
Secretary.

GRAIN SURVEY BOARDS

The Grain Survey Boards as constituted under the Canada Grain Act, 1925, as amended 1929, continued in office until August 31, 1930, but no surveys were held during the crop year under review.

The members of these boards were:—

Toronto.—D. O. Ellis, A. O. Hogg, R. H. Goode, D. A. Campbell, E. D. Sullivan, C. B. Walls, R. I. Braiden, C. W. Brand, Murray Brown, and W. H. McCarthy. F. D. Tolchard, secretary.

Montreal.—C. R. Esdaile, chairman; T. A. Climo, A. Chaplin, R. Hume, and J. M. Vittie. H. C. Beatty, secretary.

BOARDS OF GRAIN APPEAL

The Boards of Grain Appeal as constituted under the Canada Grain Act 1925, amended 1929, continued in operation until August 31, 1930.

The members of these boards were:—

Winnipeg.—Geo. Serls, R. C. Steele, P. V. Wright, Grant Hammond, A. F. Moore, G. J. Wells, J. McMahon, S. C. Swanton, and W. Duncan. C. N. Bell, secretary.

Calgary.—Geo. Hill, chairman; W. McLeod, S. J. Ewing, A. Piersen, J. A. Harris, E. J. Munson, C. W. Roenish, D. L. McLean, and W. W. Cumming. D. O. McHugh, secretary.

Edmonton.—C. R. Manahan, chairman; W. H. Boyle, L. T. Ingram, F. J. Wolfe, C. C. Gillies, R. H. Settle, A. Fraser, J. A. Kyle, and J. W. Allen. John Blue, secretary.

REPORTS OF THE APPEAL BOARDS FOR THE YEAR ENDED AUGUST 31, 1930

	Number of Appeals Held	Number of Appeals allowed		Number of Appeals Failed

GRAIN APPEAL TRIBUNALS

The Canada Grain Act 1930, section 47, which came into effect on September 1, 1930, provided for the constitution of Grain Appeal Tribunals in place of the Grain Survey Boards and Boards of Grain Appeal constituted under the Canada Grain Act, 1925, as amended in 1929.

Grain Appeal Tribunals have been constituted by the board at the following points: Winnipeg, Calgary and Edmonton in the Western Division, and at Toronto and Montreal in the Eastern Division; the members of these tribunals are as follows:—

Winnipeg.—Geo. Serls, chairman; J. Murray, P. V. Wright, Grant Hammond, A. F. Moore, G. J. Wells, J. McMahon, and S. C. Swanton. C. N. Bell, secretary.

Calgary.—Geo. Hill, chairman; W. McLeod, S. J. Ewing, Arthur Piersen, J. A. Harris, E. J. Munson, C. W. Roenisch, D. L. McLean, and W. W. Cumming. F. W. Mackenzie, secretary.

Edmonton.—C. R. Manahan, chairman; W. H. Boyle, L. T. Ingram, F. J. Wolfe, C. C. Gillies, R. H. Settle, A. Fraser, J. A. Kyle, and J. W. Allen. John Blue, secretary.

Toronto.—A. O. Hogg, chairman; C. W. Baird, H. H. Campbell, Geo. Heimbecher, W. H. McCarthy, E. D. Sullivan, R. I. Braiden, D. O. Ellis, G. E. McConney, and C. B. Watts. F. D. Tolchard, secretary.

Montreal.—C. B. Esdaile, chairman; B. J. Bolan, R. Hume, A. Chaplin, and T. B. Earle. H. C. Beatty, secretary.

APPENDIX 2

REPORT OF CHIEF INSPECTOR OF GRAIN

WINNIPEG, Man., October 27, 1930.

The Secretary,
Board of Grain Commissioners,
Winnipeg, Man.

DEAR SIR,—Herewith my annual report for the crop year August 1, 1929, to July 31, 1930.

WESTERN INSPECTION DIVISION

The crop of the year 1929 was the smallest produced in the Western Inspection Division since the crop of 1919. The seeding of the crop of 1929, both wheat and coarse grains, was completed by the end of May, with sufficient moisture for germination, but owing to an unusually dry fall in 1928, and light snow fall during the winter, the ground had little or no subsoil moisture. Cool to cold weather in the spring, and continuous hot, dry weather during the growing season seriously affected the crop over large areas in all three Prairie Provinces. The result was a very short crop, but the wheat produced was of excellent quality, and high grade.

The total inspections for the crop year 1929-1930 in the Western Division amounted to 191,204 cars as against 413,508 cars for the previous year.

The total inspections from August 1, 1929, to July 31, 1930, are made up as follows:—

	Cars	Percentage
Wheat	161,680	84.56
Oats	8,700	4.55
Barley	14,932	7.81
Flax seed	1,412	0.74
Rye	3,970	2.08
Mixed grain	403	0.21
Buckwheat	2	0.00
Screenings	105	0.05
	<hr/> 191,204	<hr/> 100.00

The grades of wheat show as follows:—

	Cars	Percentage
1 hard, 1°, 2°, and 3°	140,822	87.10
No. 4, 5, 6 and feed	5,817	3.60
No grade, tough or damp	2,331	1.44
Other grades	2,971	1.84
Amber Durum (All grades)	8,116	5.02
White Spring (All grades)	1,028	0.64
Kota wheat (All grades)	2	0.00
Winter wheat (All grades)	587	0.36
Red Durum (All grades)	6	0.00
	<hr/> 161,680	<hr/> 100.00

The grades of Oats show as follows:—

	Cars	Percentage
Nos. 1, 2 and 3 C.W.	3,074	35.33
Extra 1 feed, 1 feed and 2 feed	5,141	59.09
No grade, tough or damp	179	2.06
Other grades	306	3.52
	<hr/> 8,700	<hr/> 100.00

The grades of Barley show as follows:—

	Cars	Percentage
Nos. 1 C.W., 2 C.W. and 3 Ex. C.W.	1,886	12.63
Nos. 3 and 4 C.W.	10,317	69.09
Feed and rejected	95	0.64
No grade, tough or damp	575	3.85
Other grades	2,059	13.79
	<hr/> 14,932	<hr/> 100.00

The Grades of Flax Seed show as follows:—

	Cars	Percentage
No. 1 N.W. and 2 C.W.	1,391	98.51
No. 3 C.W.	6	0.43
No grade, tough or damp	4	0.28
Other grades	11	0.78
	<hr/> 1,412	<hr/> 100.00

The grades of Rye show as follows:—

	Cars	Percentage
No. 1, 2 and 3 C.W.	3,631	91.46
No grade, tough or damp	72	1.81
Other grades	267	6.73
	<hr/> 3,970	<hr/> 100.00

The number of cars of grain inspected at the various Inspection Points, were as follows:—

	Cars	Percentage
Winnipeg	113,046	59.12
Calgary	23,393	12.24
Edmonton	19,920	10.42
Moose Jaw	16,146	8.45
Saskatoon	14,812	7.74
Medicine Hat	2,450	1.28
Superior	265	0.14
Vancouver	1,149	0.60
Prince Rupert	23	0.01
	<hr/> 191,204	<hr/> 100.00

REPORT OF REGISTRAR

WINNIPEG, MAN., November 27, 1930.

J. RAYNER, Esq.,
Secretary, Board of Grain Commissioners,
Winnipeg, Man.

DEAR SIR,—I herewith submit a statement showing the work of the Registration Department for the crop year ended August 31, 1930:—

Total bushels registered		Total bushels registered for cancellation	
Wheat	168,187,006.20	Wheat	170,606,906.50
Oats	6,661,803.19	Oats	12,776,688.20
Barley	19,430,827.09	Barley	10,511,505.39
Flax	1,162,723.16	Flax	1,035,583.40
Mixed grain	859,238.08	Mixed grain	956,719.10
Rye	5,628,269.34	Rye	1,655,550.41
Oat scalps	849,755.06	Oat scalps	391,127.23
Corn	347,482.48	Corn	340,498.32

Yours truly,

W. T. TODD,
Deputy Registrar.

APPENDIX 4

REPORT OF CHIEF WEIGHMASTER

FORT WILLIAM, ONT., November 26, 1930.

The Secretary,
Board of Grain Commissioners,
Winnipeg, Man.

DEAR SIR,—Herewith is my annual report for the crop year ending July 31, 1930:—

ELEVATORS

During the crop year this branch maintained staffs at one hundred and two (102) licensed elevators in the Western Division as follows: thirty-three (33) at Port Arthur and Fort William, twenty-two (22) at the Pacific coast and forty-seven (47) at interior points.

The handling and weighing equipment in the above elevators has been under constant supervision and the upkeep of the different plants has been satisfactory.

SCALES

In the thirty-three (33) elevators operating at Port Arthur and Fort William there are two hundred and three (203) scales of varying capacity up to seventy-five (75) tons and with the services of a scale mechanic employed by the elevator companies, these scales have been kept in good repair.

In the Government interior elevators at Moose Jaw, Saskatoon, Calgary, Edmonton and at the terminal elevators at Vancouver, Prince Rupert, Victoria and New Westminster, loading to deep-sea berths, there are ninety-four (94) scales, making a total of two hundred and ninety-seven (297) scales under my supervision, which have been inspected twice during the year. The semi-annual test is made to insure the continued accuracy of the scales, for which there is no charge. Under my authority as elevator scale inspector, the regular annual inspection was carried out as provided for by the Weights and Measures Act, for which certificates of verification were issued and fees collected and remitted to the following district inspectors of Weights and Measures:—

J. B. Attridge, Winnipeg	\$2,267 70
E. B. Lorrimer, Regina	79 60
W. Wallace, Saskatoon	77 60
A. E. H. Cable, Calgary	75.30
J. M. McLeod, Edmonton	68 80
A. H. Dutton, Vancouver	651 45
	<hr/>
	\$3,220 45

(Detailed statement of above attached.)

EASTERN DIVISION

Staffs were maintained on a fees basis at seven (7) licensed elevators under the supervision of Mr. Bowen of Montreal.

The scale inspection in the licensed elevators in the Eastern Division was carried out by Mr. A. A. Bowen of Montreal, under his authority as Weights and Measures Inspector.

WEIGHING STAFF

At the commencement of the crop year August 1, 1929, there were in the Western Weighing Division two hundred and seventy-five (275) employees, staffs being maintained at the following points:—

Ontario.—Port Arthur, Kenora, Fort William, and Keewatin.

Manitoba.—Winnipeg and Portage la Prairie.

Saskatchewan.—Saskatoon, Moose Jaw, and Facteria.

Alberta.—Medicine Hat, Edmonton, and Calgary.

British Columbia.—Vancouver, Prince Rupert, New Westminster, and Victoria.

During the crop year the following reductions in the staff took place:—

Superannuated.....	1
Deceased.	3
Dismissed.	1
Resigned.....	4
Laid off.....	7
	<hr/>
	16
	<hr/>

while the additions totalled ten (10), representing new appointments, re-engagements and the filling of some of the above vacancies. The staff at the close of the crop year, July 31, 1930, totalled two hundred and sixty-nine (269) employees.

TRADE AND COMMERCE

LEAK AND SEAL INSPECTION

Following is a report of the work of the leak and seal inspectors stationed in the railway yards at Winnipeg for the crop year ending July 31, 1930:—

	Cars Inspected	Cars Leaking	Cars with Missing or Defective Seals
Canadian Pacific Railway.....	70,014	15,238	2,375
Canadian National Railway.....	64,830	10,844	664

SUMMARY

Cars inspected.....	134,844
Cars leaking and defective.....	26,082
Cars with missing or defective seals.....	3,039
Condition reports completed for grain trade.....	18,181

During the crop year, eighteen thousand one hundred and eighty-one (18,181) condition reports were completed for the grain trade. This service is of great assistance to shippers in the collection of claims for shortages.

WEIGHING

Following are the quantities of grain which were weighed into and out of the elevators in the Western Division during the crop year ending July 31, 1930:—

SHORTAGES—CARS

Every precaution is taken to maintain the integrity of Government weights at the terminal elevators, but complaints of shortages on the outturn of cars come to us, in the majority of which, upon investigation, the cause is shown to be beyond the jurisdiction of the officers who supervise the weighing and in a great many cases it is apparent that these discrepancies are due to errors at loading, loss in transit or other unknown causes. In some cases investigation has shown the unloading elevator or the railways were responsible and settlement was secured or recommended.

SHORTAGES—VESSELS

Reported shortages on the outturns of vessel cargoes unloaded at Eastern Canadian and American ports continue to show about the same average:—

	Canadian ports	American ports
	Per thousand bushels	Per thousand bushels
Wheat.....	23.4 short	16.37 short
Oats.....	30.04 "
Barley.....	29.32 "	2.39 over
Flaxseed.....	15.12 "	80.91 short
Rye.....	28.09 "	39.47 over

Complaints were received of serious shortages on some individual cargoes during the season, the loading and weighing of which were thoroughly investigated without finding any trace of or cause for the reported shortages at the loading elevators.

No outturns are received from cargoes loaded at the Pacific coast ports.

STATEMENT—SHOWING THE SHIPMENTS OF GRAIN FROM FORT WILLIAM, PORT ARTHUR DURING THE CROP YEAR 1929-1930

ANNUAL WEIGH-UP

All the stocks in elevators operating under Public Terminal Licences were weighed up in accordance with the Act, also the stocks of the four top grades of wheat in elevators operating under private elevator licences in the Western Division, the weigh-up of the four top grades of wheat in the private terminals being necessary to determine the quantity in store prior to August first when section 140, subsection 1 of the Canada Grain Act, became effective. Statements were prepared of the correct quantities of each grade in store in the public terminals and of the four top grades of wheat in the private terminals and forwarded to the Board, the stocks in both public and private elevators being exceptionally heavy.

During the crop year a number of elevators operating under public and private licences in the Eastern and Western Divisions were weighed up by request, the usual charge being made for this service.

S. M. CAPON,
Chief Weighmaster.

APPENDIX 5

REPORT OF GRAIN RESEARCH LABORATORY

WINNIPEG, January 20, 1931.

The Board of Grain Commissioners,
Winnipeg, Man.

SIRS,—I have the honour to submit the following statement showing the special investigations and work carried out by the laboratory during the past year:—

1. Survey of the Protein Content of the Contract Grades of Hard Red Spring Wheat grown in Western Canada during the crop year 1930-31.
2. The comparative values of Canadian and foreign wheats.
3. Tests of varieties of wheat.
 - (a) Bald Wheat.
 - (b) Minturki Wheat.
 - (c) Hope Wheat.
 - (d) Ceres Wheat compared with Marquis.
4. The D-K. Rapid Moisture Tester.
5. The Improved Carter Simon Rapid Moisture Tester.
6. Removal of Ergot from Rye.
7. An Automatic Proofing Device for Bread Doughs.
8. Special tests for the information of the Chief Inspector.
 - (a) Comparative milling and baking quality of Hard Red and Hard White Kernels, contained in a sample of Marquis Wheat.
 - (b) Milling and baking quality of Montana Red Winter Wheat grown in Manitoba.
 - (c) The effect of different percentages of soft starchy wheat on the baking quality of Hard Red Spring Wheat.
 - (d) Protein content of cargoes of No 4 wheat.
 - (e) Drying of wheat.
 - (f) The oil content of damaged flax.
9. Tests of damaged wheat.
 - (a) Plump grass green kernels in otherwise normal wheat.
 - (b) Bleached wheat.
 - (c) Sprouted wheat.
 - (d) Bran frosted wheat.
 - (e) Heavily frosted wheat.
 - (f) Lower grades containing large percentages of frosted, green and immature kernels.

The supervision of the moisture testing at all inspection offices from the Atlantic to the Pacific has been continued as in the past. By constantly checking the results obtained at the different points with tests made on the same samples in the laboratory, a high degree of uniformity has been obtained at all points.

The laboratory has been pleased to co-operate with the Cereal Department of the Department of Agriculture and to conduct on different occasions a series of protein tests in connection with their plant breeding work on new varieties of wheat.

On numerous occasions throughout the year the laboratory has been of service to farmers, grain and milling organizations both in Canada and abroad by supplying them with information regarding the protein content, milling and baking qualities of different grades, varieties and types of wheat, the deterioration of grain in storage, and other related matters.

I also have the honour to submit separately a detailed report of the work of the laboratory with the recommendation that it may be published separately.

Yours respectfully,

F. J. BIRCHARD,
Chemist in Charge.

APPENDIX 6

REPORT OF SECRETARY

WINNIPEG, January 9, 1931.

The Chairman,
Board of Grain Commissioners,
Winnipeg, Man.

SIR,—I have the honour to submit the following report covering the work of the Executive Offices of the board during the year ended December 31, 1930.

REORGANIZATION

The work of the executive offices was greatly handicapped at the beginning of the year owing to the fact that while the headquarters of the board had been moved from Fort William to Winnipeg it had not been possible to complete the moving of the necessary staff to Winnipeg and a part of the work was carried out from Fort William and the remainder from Winnipeg. The former secretary, Mr. F. J. Rathbone, was appointed Assistant Commissioner at the Head of the Lakes in December, 1929, and did not move to Winnipeg when the board established offices at that point, but he continued until July 10, 1930, to carry out the duties of secretary as far as possible at Fort William in addition to his duties as an assistant commissioner. The secretarial work at Winnipeg was carried out by a skeleton staff under Mr. V. C. LeFeuvre, Principal Clerk.

I took over the duties of secretary to the board on July 11, 1930, and since that date the whole of the secretarial work has been performed from the Winnipeg office.

The Licence and Bonding Branch was moved from Fort William to Winnipeg at the end of July, 1930, but it was decided that the Statistical Branch was to remain in Fort William.

OFFICES

The offices taken over by the board on the third floor in the Grain Exchange Annex when the offices were first established in Winnipeg were found to be unsatisfactory and in October, 1930, other offices were taken over on the second floor in the same building and while these offices are not entirely suitable, the present arrangements appear to be the best that can be made with the space available. The offices of the members of the board, secretary, Board Room, Licence and Bonding Branch, Canadian Government elevators and the Registration Branch are now en bloc, with the offices of the accountant, previously located in the offices of the Inspection Branch, and the office of the assistant commissioner for Manitoba, immediately above.

TRADE AND COMMERCE

OFFICE PROCEDURE AND ROUTINE

Owing to the system used in Fort William not permitting of a cut-off in the files and records at a certain date, it was not possible without undertaking a great deal of work, to move all the more recent files and records from Fort William to Winnipeg.

It was not considered advisable to move all the files and records of the board since its inception in 1912, so only files and records considered to be absolutely essential have been moved to Winnipeg, other files and records being brought up as found necessary.

After considering the special needs of the executive offices of the board and examining different systems, a complete new filing system has now been introduced and this system appears to be working most satisfactorily. The same system has been introduced in the offices of the Statistical Branch and is also being introduced into the offices of the assistant commissioners. There are still one or two points with regard to the system for maintaining records of books, publications and reports which can be improved and consideration is being given to this matter, as also the matter of introducing a complete staff record to be maintained in the secretary's office.

A number of instructions have been issued regarding office procedure, etc., which all tend to greater efficiency in the executive offices of the board.

STAFF

The staff of the secretary's office in addition to the principal clerk and the secretary to executive who were transferred from Fort William has been augmented by the appointment of one stenographer, Grade 2, one clerk, Grade 3, and one clerk, Grade 1. The total number on the staff being the same as were previously on the secretary's staff in Fort William.

MEETINGS OF THE BOARD

Since my appointment as secretary, I have attended all the meetings of the board, except the public tariff sessions held in Vancouver and Toronto on August 20, 1930, and September 3, 1930, respectively, and have recorded the minutes of these meetings and issued to the parties concerned the decisions of the board.

The Canada Grain Act, 1930, which came into operation on September 1, 1930, necessitated the publication by the board of certain regulations, and instructions *re* changes in procedure and the instructions of the board in these matters have been issued to all concerned.

LICENCE AND BONDING BRANCH

This branch with Mr. C. F. Spittle in charge completed its work for the 1929-30 crop year in Fort William, being moved to Winnipeg at the end of July, 1930.

Under the Canada Grain Act, 1930, the definition of certain classes of elevators were changed and this necessitated a number of licencees applying for a different licence to that under which they had operated for the past few years. This involved extra work for the branch, but the work was facilitated to a great extent by the fact that constant reference could be made to the head offices of a large proportion of the elevator companies, since the offices were located in Winnipeg.

Of the staff of six maintained by this branch in Fort William, five members were transferred to Winnipeg, one stenographer who preferred to remain in Fort William being transferred to the office of the Statistical Branch, her position being filled by the Civil Service Commission from the eligible list for stenographers at Winnipeg. One extra clerk, Grade 3, has been added to the staff, making a total staff of seven.

STATISTICAL BRANCH

The work of this branch has been increased considerably since September 1, 1930, owing to the necessity for maintaining the additional records necessary to permit the Board to exercise the closer supervision of grain in terminal elevators pursuant to the provisions of the Canada Grain Act, 1930, and the staff has been increased by the addition of three clerks, Grade 3 and one stenographer, Grade 2, to a total of twenty-six.

In October, 1930, the offices of the branch in the Grain Exchange building, Fort William, were moved to a brighter and more suitable location in the same building.

The following memoranda summarizing different matters handled and statements compiled by the executive offices are attached herewith:—

- (a) Complaints.
- (b) Defaults.
- (c) Cars out of turn.
- (d) Summary of licences issued for the season 1929-30.
- (e) Licences issued during the past nineteen seasons.
- (f) Elevators and storage capacity.
- (g) Comparative summary of elevators for past nineteen years.
- (h) Grain loading platforms.
- (i) Report of statistician.
- (j) Summary of annual weigh-up public terminal elevators, 1930.
- (k) Sessions held by the board.

Your obedient servant,

J. RAYNER,
Secretary.

COMPLAINTS

During the period from September 1, 1929, to December 31, 1930, the board received one hundred and sixty-nine (169) complaints regarding the handling of grain at country elevators, shipments to terminal elevators, the weighing and grading of grain, the operations of licensees and the operations of parties dealing in grain but not licensed under the Canada Grain Act.

Formal investigations were held by the Board or by an Assistant Commissioner into seven (7) of these complaints.

During the same period twenty (20) complaints were made to the Board regarding the weights and quality of export shipments.

SUMMARY OF COMPLAINTS

Total		169

SUMMARY OF DISPOSITION OF COMPLAINTS REGARDING EXPORT SHIPMENTS

Complaints not justified	17	
Allowance made	1	
Not yet disposed of	2	
Total		20

PROSECUTIONS

In two cases of complaint where breaches of the Canada Grain Act were disclosed, action was instituted by the board in the civil courts and convictions secured in both cases.

DEFAULTS

During the period from September 1, 1929, to December 31, 1930, the default of Robert MacInnes and Company, Limited, of Winnipeg, who were licensed by the board as commission merchants, was the only case of default by a licensee in which claims were submitted to the board for settlement from the security, a Bond in the amount of ten thousand dollars (\$10,000) executed by the Canadian Indemnity Company of Winnipeg, furnished to the board when the licence was issued.

Ten claims amounting to seven thousand, four hundred and ninety dollars, fifty-seven cents (\$7,490.57) filed with the board were found to be within the scope of the commission merchants' bond and a cheque for this amount was received from the Canadian Indemnity Company and distributed amongst the claimants in settlement of their claims in full.

CARS OUT OF TURN

During the period from September 1, 1929, to December 31, 1930, the Board found it necessary on only one occasion to order cars out of turn in accordance with section 68 of the Canada Grain Act, 1930, when eight cars were supplied to a country elevator which was in danger of collapse.

SUMMARY OF LICENCES ISSUED FOR THE SEASON 1929-30

During the season, 220 firms and individuals applied for licences as required by the provisions of The Canada Grain Act.

Five thousand seven hundred and sixty-two applications for licences were received. Eleven of the applications were withdrawn and 5,751 licences were issued.

APPLICATIONS RECEIVED AND LICENCES ISSUED

Kind of Licence	Applications		Licences issued

GRAIN LOADING PLATFORMS

Only three applications for the construction of loading platforms have been received by the Board since September 1, 1929.

At December 31, 1929, there were 2,578 loading platforms in Western Canada at which farmers could load grain, without putting such grain through country elevators, into 6,183 cars simultaneously.

SUMMARIZED STATEMENT OF GRAIN LOADING PLATFORMS IN WESTERN CANADA

Province	Number of platforms	Car capacity
Manitoba.....	643	1,791
Saskatchewan.....	1,224	2,913
Alberta.....	672	1,405
British Columbia.....	31	58

REPORT OF STATISTICIAN—CROP YEAR 1929-30

The western Canadian grain crop of 1929 was the smallest for five years, but it followed the largest, by far, that Canada has ever experienced and of which a substantial quantity still remained to be disposed of.

The following figures represent the total carry-over, the crop of the three Prairie Provinces, the total Canadian crop, the quantities handled by different groups of elevators and the amounts exported, of the five principal grains:—

CROP YEAR 1929-30

	Carry-over July 31, 1929	Crop of Prairie Provinces	Crop of all Canada	Carry-over July 31, 1930
	bush.	bush.	bush.	bush.
Wheat.....	104,383,221	281,664,000	304,520,000	111,692,519
Oats.....	45,165,498	141,620,000	282,838,300	21,411,710
Barley.....	11,020,857	79,787,000	102,313,300	22,840,550
Flaxseed.....	561,487	1,970,000	2,060,400	636,658
Rye.....	4,219,756	11,982,000	13,160,500	9,192,059

During the year a substantial number of names have been added to our mailing lists and whilst every effort is made to anticipate the needs of the trade, public bodies and other interested parties, for statistics concerning the marketing movement and handling of Canada's grain crops, inquiries and requests for special data, etc., continue to increase steadily.

As the result of an ever-increasing demand for details of stocks in store, by grades, at eastern elevators, the publication on Tuesday (or Wednesday) of each week, of these details was commenced. Also, when the possibility of congestion at Canadian lower lake ports during the fall movement of 1929 developed, a new weekly statement was introduced on which were shown the total stocks of all grains in store as compared to the capacity at each port. Both of these statements were continued throughout the year and appear, from expressions of appreciation received, to be of value to exporters and transportation interests particularly.

CHECKING OF INSURANCE

Under the Canada Grain Act, 1925, operators of public terminal and country elevators were required to fully insure, with approved companies, all grain in store in such elevators against loss by fire.

In the case of the public terminal elevators at Fort William-Port Arthur, Vancouver and Victoria, the insurance was effected by means of specific policies usually placed with a number of companies through one agency. The elevator operators arranged with the agencies to furnish weekly advices of the policies in force and amounts of each. The amounts in force were carefully checked against the value of the grain in store, by grades, as worked out in this office, and the names of the insurance companies compared with the official list of companies licensed to transact business in Canada under the Insurance Act. Where amounts in force appeared to be below the value of the grain in store, the elevator concerned was immediately notified and advice of the additional insurance being placed received promptly. Such occurrences are very rare and usually occasioned by wide fluctuations in prices not being provided for immediately. In the past crop year they did not exceed five.

The insurance of grain in store in country elevators is principally effected by means of "open" policies. Copies of these for eighty-two licensees or groups of licensees were received and scrutinized embracing all the principal companies and the three Pool organizations. Forty-four licensees carried specific insurance, advices of which were received and dealt with in precisely the same manner as for public terminals. During the year three cases of insufficient insurance were noticed and increases requested.

CHARTERS

The Inland Water Freight Rates Act, 1923, requires every shipper of grain loaded at Fort William-Port Arthur to file with the board a copy of the charter confirmation issued by the vessel broker covering each cargo or parcel of grain shipped, unless it is milling grain to be milled in Ontario.

From these charter confirmations weighted averages of freight rates charged, month by month, for the carriage of grain in vessels by each route and destination are compiled for the information of the minister, the board, and for publication. In addition, vessel owners or brokers occasionally ask for special data for use as evidence in disputes or lawsuits, and in one case an exact copy, with accompanying sworn attestation, was furnished the shipper for submission as evidence in the courts of the United States.

PRICES OF GRAIN

Periodicals and market price lists are obtained and preserved on file showing the prices of grain at all the principal markets of North America and Great Britain. Averages of the daily quotations are compiled for the principal grades of spot grain and of each kind of grain in the futures market for publication and as more permanent records.

E. A. URSELL,
Statistician.

REPORT OF CANADIAN GOVERNMENT ELEVATORS FOR CROP YEAR ENDED JULY 31, 1930

During the year five elevators were operated by the board, viz., Port Arthur, Moose Jaw, Saskatoon, Calgary and Edmonton. The elevators at Prince Rupert and Halifax are still operated by other parties under lease.

The volume of grain handled at each of the five elevators was less than that of the previous year, the total showing a decrease of over four and a half million bushels, made up as follows:—

Elevator	1928-29	1929-30	Decrease
Port Arthur.....	5,009,437	3,233,123	1,776,314
Moose Jaw.....	3,955,107	3,145,507	809,600
Saskatoon.....	3,545,450	2,831,192	714,258
Calgary.....	4,058,724	3,107,347	951,377
Edmonton.....	3,314,012	2,896,801	417,211
	19,882,730	15,213,970	4,668,760

The decreased handling at Moose Jaw and Saskatoon is largely accounted for by the fact that at the commencement of the crop year these elevators were half filled with grain of the previous crop.

Work has been commenced on additional storage capacity of 2,000,000 bushels to each of these elevators, but as this will not be completed until December it is doubtful whether it will be used to any great extent for the 1930 crop. It should however result in considerably increasing the volume to be handled in future years.

During the latter part of the year under review the Moose Jaw and Saskatoon elevators have handled shipments of grain, principally feed oats, for account of the Provincial Government, destined to those parts of the province where light crops have been experienced, and arrangements have now been completed which it is anticipated will enable the elevators to co-operate with the provincial Department of Agriculture in rendering very valuable service in this direction.

Early in the crop year automatic grain samplers were installed on receiving legs at all the elevators, to ensure accurately representative samples being taken from all cars at the time of unloading.

Arrangements are being made for the installation of new up-to-date cleaning machinery, where necessary, to enable the elevators to maintain their position in rendering to their patrons the greatest possible service in handling and treating all classes of grain.

Notwithstanding the decrease in volume handled, the operations for the year show a surplus of revenue over expenditure, after making the usual provision for depreciation of buildings and equipment. This is mainly accounted for by the grain remaining in store for longer periods, resulting in correspondingly greater storage revenue.

Respectfully submitted,

R. HETHERINGTON,
General Manager.

REGULATIONS OF THE BOARD

REGULATION No. 1, 1930

At a regular meeting of the Board of Grain Commissioners for Canada held at Winnipeg on the twelfth day of September, 1930, the said board did make the regulation as set out hereunder, in accordance with section 15 (v), of the Canada Grain Act, 1930.

REGISTRATION AND CANCELLATION OF TERMINAL ELEVATOR
WAREHOUSE RECEIPTS

1. The word "registered" when used in reference to a warehouse receipt shall mean that a distinctive rubber stamp, bearing the date and the word "registered" is superimposed on the warehouse receipt in the space provided, and signed by the registrar, or deputy registrar.

2. Each manager or operator as soon as possible after the 31st of July in each year, unless otherwise determined by the board, shall prepare and deliver to the registrar a statement of all outstanding warehouse receipts at that date. Such statement shall be made by grades, showing the warehouse receipt number and the bushels.

3. Each manager or operator shall present to the registrar for registration warehouse receipts for all grain unloaded in his public or semi-public terminal elevator. Such warehouse receipts shall state the quantity and grade of grain, the date unloaded and the person on whose account the grain has been received. The Registrar shall compare the same with the records of his office and if he shall find that the same is issued for grain actually received in store into the elevator, and if for the correct quantity and grade of grain so received therein as shown by the records in his office, he is directed and authorized to stamp the same with his official stamp as registered, and to make a record thereof in the proper books of his office.

4. When any grain is shipped from any public or semi-public terminal elevator, the manager or operator thereof shall tender to the Registrar for "registration for cancellation" registered warehouse receipts covering the same both as to quantity and grade. All such receipts tendered to the registrar as aforesaid shall be accompanied by a report showing the number of the warehouse receipt; the number of bushels and kind of grain represented by such receipt, and such receipts shall be presented to the Registrar for cancellation as soon as possible after the shipment of the grain, in no case exceeding forty-eight hours after such grain has been shipped from the elevator.

5. Each manager or operator of a semi-public terminal elevator shall furnish the Registrar daily with a correct statement of the amount of each kind and grade of grain received into store in his elevator on the previous day. Also the amount of each kind and grade of grain shipped by each elevator during the previous day and a certified statement showing the balance in store at the close of business each day of each kind and grade of grain.

6. The manager or operator of a public or semi-public terminal elevator may present to the Registrar warehouse receipts to be split into two or more parts. A cancellation report shall be made showing date, number, bushels and grade of warehouse receipts being cancelled, and a registration report showing date, number, bushels and grade of the new warehouse receipts. Such new warehouse receipts shall be registered by the registrar.

7. The manager or operator of a semi-public terminal elevator may present to the Registrar two or more warehouse receipts for consolidation. A cancellation report shall be made up showing date, number of bushels, grade and number of warehouse receipts being cancelled and a registration report

showing date, number of bushels, grade, and number of the new warehouse receipt. Such new warehouse receipt shall be registered by the registrar. Consolidations for grades No. 1 Hard, One Northern, Two Northern and Three Northern must be for the same grade as is shown on the warehouse receipts presented for cancellation, all other consolidations may be registered as to grade for a grade different from that shown on the cancelled warehouse receipts provided that the total outstanding warehouse receipts including the said warehouse receipt for grain of such grade, shall not exceed the total quantity of grain of such grade shown to be in store at that date.

8. All warehouse receipts for grain issued by the manager or operator of any public or semi-public terminal elevator shall be in the form approved by the board and shall for each elevator be numbered consecutively. No two receipts bearing the same number shall be issued from the same elevator during any one year, except in the case of a lost or destroyed receipt, in which case the new receipt shall bear the same date and number as the original and shall be plainly marked on its face "duplicate."

9. The registrar shall furnish each manager or operator with a Signature Card and the manager or operator shall complete such card with a specimen signature of all the officers or employees who are authorized to sign and countersign warehouse receipts in their behalf.

10. Each public or semi-public terminal elevator shall pay to the Board a registration fee of 4 cents per thousand bushels for inward registration, and 4 cents per thousand bushels for registration for cancellation.

11. All warehouse receipts shall be signed and countersigned before being presented for registration.

Signed this twelfth day of September, 1930.

(Signed) E. B. RAMSAY,
Chief Commissioner.

(Signed) D. A. MACGIBBON,
Commissioner.

(Signed) C. M. HAMILTON,
Commissioner.

(Signed) J. RAYNER,
Secretary.

REGULATION No. 2, 1930

At a regular meeting of the Board of Grain Commissioners for Canada, held in Winnipeg on the twelfth day of September, 1930, the said board did make the regulation as set out hereunder, in accordance with section 15 (s) of the Canada Grain Act, 1930.

MAXIMUM SHRINKAGE ALLOWANCES WHICH MAY BE MADE ON THE DELIVERY OF GRAIN TO COUNTRY ELEVATORS

No elevator shall take more than the allowance for shrinkage, waste in handling, storing and transmitting the grain to a terminal than the weight in pounds set forth in this shrinkage table. All shrinkage on tough and damp grain shall not be more than double the allowance as set forth in this schedule. This shrinkage table shall be placed conspicuously in all licensed country elevators for free inspection of the public.

REGULATION No. 3, 1930

At a regular meeting of the Board of Grain Commissioners for Canada held at Winnipeg on twelfth day of September, 1930, the said board did make the regulation as set out hereunder, in accordance with sections 15 (R), (T) 110, (2); and 112; of the Canada Grain Act, 1930.

MAXIMUM TARIFF OF CHARGES AND RULES AND REGULATIONS FOR LICENSED COUNTRY ELEVATORS, FOR THE CROP YEAR ENDING AUGUST 31, 1931

MAXIMUM TARIFF OF CHARGES

Subject to the capacity of the elevator and the nature of the construction, all grain tendered must be taken into store upon following terms and conditions, and under the provisions of the Canada Grain Act, 1930:—

Maximum Rates—Special Bin Grains:

Receiving, elevating, spouting, insurance against fire, storing for the first fifteen (15) days and putting into cars on track; no elevator shall charge more than three cents (3 cents) per bushel for Flax, two and one-half cents (2½ cents) per bushel for Wheat, Barley and Rye, and one and three-quarter cents (1¾ cents) per bushel for Oats.

Graded Storage and Subject to Grade and Dockage Grain:

Receiving, elevating, spouting, insurance against fire, storing for the first fifteen days and putting into cars on track no elevator shall charge more than three cents (3 cents) per bushel for Flax, two cents (2 cents) per bushel for Wheat, Barley and Rye and one and three-quarters cents ($1\frac{3}{4}$ cents) per bushel for Oats. Storage not otherwise provided, including insurance against fire, for each succeeding day after the first fifteen (15) days shall not exceed one-thirtieth of one cent ($1/30$ cent) per bushel.

Cleaning:

The rate for cleaning grain shall be mutually agreed upon by the elevator operator and the owner of the grain according to the nature of its dockage, but in no case shall the rate exceed a maximum of two cents (2 cents) per bushel.

Shrinkage:

No elevator shall take more than the allowance for shrinkage, waste in handling, storing and transmitting the grain to a terminal than the weight in pounds set forth in the shrinkage table as authorized and declared to form part of the tariff and Rules and Regulations for Country Elevators.

All shrinkage on tough and damp grain shall not be more than double the allowance as set forth in the aforesaid schedule.

Such shrinkage table shall be placed conspicuously in all licensed Country Elevators for free inspection of the public.

Dockage on Cash or Stored Grain:

No elevator shall take a greater dockage than that shown by a proper test over a number ten sieve, except where the grains contain foreign grain or seeds which cannot be taken out by a number ten sieve.

Every elevator must be equipped with the necessary sieves and scales for making proper tests, and the elevator operator must make the test in the presence of the owner of the grain when requested.

General:

When tough, damp or wet grain is taken into store it shall be at the owner's risk, and the elevator operator shall have the right to ship it immediately to a terminal elevator for treatment.

All tough, damp or wet grain, containing an excessive amount of snow, and ice, may be handled subject to agreement between the owner of the grain and the operator.

RULES AND REGULATIONS:

1. The owner or operator of a country elevator shall post in the elevator in a conspicuous place, a diagram to a scale of not less than one-half inch to one foot, showing the location and numbers of the several bins in such elevator.

2. In shipping or delivering any grain stored in a country elevator, the net weight on the ticket or tickets shall be final, unless an investigation by the Board of Grain Commissioners shows reason for the contrary. The shipper to be paid in case of short shipment up to the amount of his or her ticket or tickets for the full billing capacity of the car, at the same price as the car was disposed of.

3. All shipping bills for grain shipped through an elevator shall be made out by the elevator agent, and he shall advise such parties as the owner may instruct.

4. The owner of grain in an elevator wishing such grain shipped to any point other than a terminal point, or where Government weights cannot be obtained, the owner of the grain must then accept the elevator weights at the shipping point as final unless it is proved that the shipping weights are not correct. Provided, moreover, the owner of the grain can always demand an affidavit as to the actual grain shipped and delivered from the elevator operator and receiver of said grain respectively.
5. No owner or operator of a country elevator or warehouse shall sell, assign, mortgage, pledge, or hypothecate any grain stored in such elevator or warehouse, for which storage tickets have been issued, and the owner or operator may be required by the Board to produce at any time proper registered warehouse receipts or bills of lading for such grain as has been shipped from the country elevator or warehouse, and for which there is still outstanding storage tickets.
6. No license will be granted for the operation of any country elevator the agent or buyer of which is subject to a shortage bond, and in the event of a shortage bond being entered into after license has been granted such license will be subject to immediate cancellation.
7. The ticket or tickets issued where there is a disagreement as to grade and dockage or where grain has been received subject to inspector's grade and dockage must have incorporated thereon at the time of issue the grade offered by the elevator owner or operator to the owner of the grain.
8. The owner of the grain can only demand the quantity that the storage ticket or tickets call for.
9. In case there is a dispute as to the weighing accuracy of the receiving scales, it shall be incumbent upon the owner of the elevator to prove that the scales are weighing accurately.
10. In the case of special bin or subject to grade and dockage grain a proper sample must be drawn from each load by the elevator operator at the time of delivery, in the presence of the party delivering same, and such sample must be drawn satisfactorily to both the deliverer and the operator, and all such samples must be placed in a suitable receptacle satisfactory to the Board of Grain Commissioners and must be properly mixed in such receptacle. The receptacle shall be provided by the warehouseman and the sample shall be placed therein in the presence of the owner. The receptacle shall be secured by padlock which the owner of the grain shall provide, and the key of which he shall retain. The warehouseman shall be the custodian of the receptacle and of the sample.
11. In the case of subject to grade and dockage grain, a fair and proper sample of at least 2 quarts shall then be drawn in the presence of the owner of the grain from such receptacle and forwarded in a suitable receptacle properly tied and sealed, and marked "Subject to Inspector's Grade and Dockage" to the Chief Inspector of Grain, and shall be accompanied by a request in writing of either or both parties aforesaid that the Chief Inspector will examine the sample and report on the grade and dockage the grain is in his opinion entitled to, and would receive if shipped to a terminal point and subjected to an official inspection.
12. After receiving the inspector's judgment, showing the grade and dockage the elevator operator shall in the case of cash tickets make settlement on the basis of the grade and dockage given by the Chief Inspector, and shall, in the case of subject to grade and dockage tickets, issue graded storage tickets showing the grade and dockage as given by the Chief Inspector for the full amount of grain so taken into store, such graded storage tickets to bear the same date as the original subject to grade and dockage tickets, after which the grain shall be subject to the rules and regulations covering graded stored grain.

13. Notwithstanding any regulation provided in paragraphs five and six of these regulations, if the identity of the grain has been preserved even though Subject to Grade and Dockage tickets may have been issued therefor, if agreeable to the owner, the grain then may be handled in accordance with the provisions of the Canada Grain Act and Rules and Regulations relating to the special binning of grain in country elevators.

14. At the time of delivery of any grain where a ticket of this kind is being used, and it is agreed upon by the owner of the grain and the elevator operator that the grain is tough, damp, or wet, and the elevator operator marks such ticket or tickets; "Out of condition, tough, damp or wet," then whatever grade such sample may receive from the Chief Inspector, it will still grade "tough, damp, or wet."

15. If the elevator operator fails at any time to draw and preserve such sample in the manner stated herein, the owner or operator must account to the owner of the grain for the grade designated by the said owner.

16. When submitting samples of grain to the Chief Inspector, elevator operators must have such samples properly marked either "Special Bin" or "Subject to Inspector's Grade and Dockage" as the case may be.

Signed this twelfth day of September, 1930.

REGULATION No. 4, 1930

At a regular meeting of the Board of Grain Commissioners for Canada held at Winnipeg, on the twelfth day of September, 1930, the said board did make a regulation as set out hereunder, in accordance with section 15 (f) of the Canada Grain Act, 1930.

INSPECTION OF SAMPLES TAKEN OTHER THAN AT AN INSPECTION POINT

1. Any producer, holder of, or person, or persons interested in any grain may submit to the Chief Inspector, or to the inspector in charge at any inspection point of the Board of Grain Commissioners at any time, a sample of such grain which has been taken otherwise than at an inspection point, provided always that such sample is forwarded in accordance with these regulations.

2. The sample must consist of two pounds of the grain which the sample represents and the sample shall be taken in such a manner as to ensure that an average and representative sample of the whole is secured.

3. Samples must be forwarded in cotton bags or tin containers with shipping tag attached and plainly addressed to the Chief Inspector or Grain Inspector in charge at any inspection office maintained by the Board of Grain Commissioners, with carrying charges fully prepaid.

4. Not more than one sample may be enclosed in one container.

5. All samples must bear on the shipping tag attached to the container or in an accompanying letter, the name and post office address of the party or parties to whom advice as to the grade of the sample is to be forwarded, and each sample must bear on the shipping tag a distinguishing number or other mark of identification. The same mark of identification must not be used by a shipper on more than one sample during the season.

6. When it is the wish of the shipper that the Inspection Department shall make a test as to condition of any sample, the sample or a portion of the sample, not less than eight ounces in weight, must be forwarded in a metal air-tight container. This sample should be placed in the air-tight container immediately the sample is taken from the bulk of the grain which the sample represents.

Signed this twelfth day of September, 1930.

REGULATION No. 5, 1930

At a regular meeting of the Board of Grain Commissioners for Canada, held at Winnipeg on the twelfth day of September, 1930, the said board did make the regulation as set out hereunder, in accordance with section 15 (r) and 134, of the Canada Grain Act, 1930.

MAXIMUM TARIFF OF TERMINAL ELEVATOR CHARGES AT FORT WILLIAM AND PORT ARTHUR TERMINALS FOR THE CROP YEAR ENDING AUGUST 31, 1931

Subject to the capacity of the elevator and the nature of its equipment, shipments must be received upon the following terms and conditions, and under the provisions of the Canada Grain Act, 1930:—

ELEVATION CHARGES

On straight grade, tough, damp or wet grain receiving, elevating, shipping, storing and insurance against fire for the first fifteen days:—

Flax..	2 cents per bushel
Rye..	1½ cents per bushel
Wheat, oats and barley..	1¼ cents per bushel

All tough, damp, wet, condemned, heating, heated or fireburnt grain may always be refused. If received and stored it will only be at the owner's risk of deterioration. All damp grain and tough and damp flax will be dried without notice as soon after unloading as facilities will permit.

On mixed grain handled as mixtures, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days, two cents (2 cents) per hundred pounds.

On screenings, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days, three cents (3 cents) per hundred pounds.

STORAGE CHARGES

On straight grade and tough grain, not otherwise specified, including insurance against fire for each succeeding day or part thereof after the first fifteen days, one-thirtieth of one cent ($\frac{1}{30}$ cent) per bushel.

On mixed grain handled as mixtures, storage, including insurance against fire for each succeeding day or part thereof after the first fifteen days, two-thirtieths of one cent ($\frac{2}{30}$ cent) per hundred pounds.

On screenings, storage including insurance against fire for each succeeding day or part thereof after the first fifteen days, one-tenth of one cent ($\frac{1}{10}$ cent) per hundred pounds.

SCREENINGS

On wheat carrying a dockage of three per cent (3%) or more, after deducting one-half of one per cent ($\frac{1}{2}\%$) of the gross weight of the car for waste, a return will be made for the balance of screenings.

On wheat carrying a dockage containing three and one-half per cent ($3\frac{1}{2}\%$) wild oats a separate return will be made for the wild oats, after deducting therefrom one-half of one per cent ($\frac{1}{2}\%$) on the gross weight of the car for waste.

On oats and barley, carrying a dockage of over five per cent (5%) after deducting one-half of one per cent ($\frac{1}{2}\%$) of the gross weight of the car for waste, a return will be made for the balance of the screenings.

On rye and flax carrying a dockage of over five per cent (5%) after deducting one per cent (1%) of the gross weight of the car to cover outward dockage and waste in cleaning, a return will be made for the balance of the screenings.

If disposition of screenings covered by outstanding returns is not received within thirty (30) days from the date of unloading, they may be disposed of for account of whom it may concern.

The holder of warehouse receipts or shut-outs covering dockage shall be entitled to receive such average quality of screenings as shall be determined by the Inspection Department in accordance with sample tests which shall be made in such manner and when deemed necessary by said department.

CLEANING CHARGES

On wheat, for removal of dockage, other than domestic grain, there will be cleaning charges as follows:—

Dockage under 3 per cent—No charge.

Dockage 3 per cent to 5 per cent inclusive—One-half cent ($\frac{1}{2}$ c.) per bushel.

Dockage $5\frac{1}{2}$ per cent to 10 per cent—One cent (1c.) per bushel.

Dockage over 10 per cent—One and one-half cents ($1\frac{1}{2}$ c.) per bushel.

On wheat carrying a return of wild oats computed on the gross weight of the car, an additional separating charge of one-half cent ($\frac{1}{2}$ c.) per bushel.

On oats, barley and rye, for removal of dockage, other than domestic grain, there will be cleaning charges as follows:—

On all cars carrying a dockage of:—

Up to and including 5 per cent—no charge.

Over 5 per cent and up to 10 per cent, oats and barley—one cent (1c.) per bushel.

Over 5 per cent and up to 10 per cent, rye—one and one-half cent ($1\frac{1}{2}$ c.) per bushel.

Over 10 per cent, oats and barley—one and one-half cent ($1\frac{1}{2}$ c.) per bushel.

Over 10 per cent, rye—two cents (2c.) per bushel.

On all grain carrying a return of other domestic grain (C.C. cars) computed on the gross weight of the car additional separating charges as follows:—

Dockage up to 10 per cent (Domestic grain)—Three cents (3c.) per 100 pounds.

Dockage over 10 per cent and up to 15 per cent—Four cents (4c.) per 100 pounds.

Dockage over 15 per cent—Five cents (5c.) per 100 pounds.

Flax cleaned from any other grain containing broken particles that cannot be separated, shall be classified as "Flax and Broken Wheat."

On flax for removal of dockage, other than domestic grain, there will be cleaning charges as follows:—

On flax carrying a dockage of:—

Up to and including 5 per cent—no charge.

Over 5 per cent and up to 10 per cent—one and one-half cents (1½c.) per bushel.

Over 10 per cent rye—two cents (2c.) per bushel.

SPECIAL SEPARATIONS

Separations of mixed grains, or straight grade grains to improve grade, computed on gross weight of car, five cents (5c.) per one hundred pounds.

On all such separations a deduction of one per cent (1%) of the gross weight will be made to cover invisible loss in separation.

DRYING CHARGES

On damp or wet grain—five cents (5c.) per bushel.

On tough grain—three cents (3c.) per bushel.

Allowance for Invisible Loss and Shrinkage on All Cars

Wheat	30 pounds per car
Oats	50 pounds per car
Barley	50 pounds per car
Mixed grain	50 pounds per car
Rye	56 pounds per car
Flax	56 pounds per car

ALL CHARGES

All charges for cleaning, drying or other treatment will be computed on gross weight of car, for elevation and storage on net weights. All charges accruing after issue of initial completed outturn and expense bill will follow the grain. All charges whatsoever must be paid before shipment.

BULKHEADS

On bulkheads for their removal and other additional expenses in handling and unloading car—five dollars (\$5) per bulkhead.

UNLOADING SACKED GRAIN

A charge of five cents (5c.) per sack will be made for unloading all sacked grain.

PREPARING CARS FOR LOADING

When paper is used in preparing cars, there will be a charge of four dollars (\$4) for each car.

UNSPECIFIED GRAIN

Unspecified grain will only be received, stored and treated subject to special charges to be agreed upon at the time, subject to the approval of the Board of Grain Commissioners.

Upon the application to the board of any terminal elevator, the above tariff may be reduced in so far as that elevator is concerned, but such reduced charges must apply to all grain received at such elevator during the crop year 1930-31.

Signed this twelfth day of September, 1930.

(Signed) E. B. RAMSAY,
Chief Commissioner.

(Signed) D. A. McGIBBON,
Commissioner.

(Signed) C. M. HAMILTON,
Commissioner.

(Signed) J. RAYNER, Secretary.

REGULATION No. 6, 1930

At a regular meeting of the Board of Grain Commissioners for Canada, held at Winnipeg on the twelfth day of September, 1930, the said board did make the Regulations as set out hereunder, in accordance with section 15 (r) and 134, of the Canada Grain Act, 1930.

MAXIMUM TARIFF OF CHARGES GOVERNMENT INTERIOR TERMINAL ELEVATORS AT SASKATOON, MOOSE JAW, CALGARY AND EDMONTON FOR THE CROP YEAR ENDING AUGUST 31, 1931

Subject to the capacity of the elevator and the nature of its equipment, shipments will be received upon the following terms and conditions, and under the provisions of the Canada Grain Act, 1930:—

ELEVATION CHARGES

On straight grade, tough, damp or wet grain, not otherwise specified, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days, one cent (1c.) per bushel.

All tough, damp, wet, condemned, heating, heated or fireburnt grain may always be refused. If received and stored, it will be only at the owner's risk of deterioration and under special contract, except that from November 1 to April 1 tough grain will be received and stored under the terms and conditions applying to straight grade grain.

On mixed grains handled as mixture, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days, one and one-half cents (1½c.) per hundred pounds.

On screenings, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days, three cents (3c.) per hundred pounds.

On grain unloaded from wagons, or teams, receiving, elevating, cleaning, shipping, insurance against fire, storage for the first fifteen days, one and one-half cents (1½c.) per bushel.

STORAGE CHARGES

On straight grade and tough grain, not otherwise specified, including insurance against fire for each succeeding day or part thereof after the first fifteen days, one-sixtieth of one cent (1/60c.) per bushel.

On mixed grain handled as mixtures, storage, including insurance against fire for each succeeding day or part thereof, after the first fifteen days, one-thirtieth of one cent ($1/30c.$) per hundred pounds.

On screenings, storage, including insurance against fire for each succeeding day or part thereof, after the first fifteen days, one-tenth of one cent ($1/10c.$) per hundred pounds.

SCREENINGS

On wheat carrying a dockage of three per cent (3%) or more, after deducting one-half of one per cent ($\frac{1}{2}\%$) of the gross weight of the car for waste, a return will be made for the balance of the screenings.

On wheat carrying a dockage containing three and one-half per cent ($3\frac{1}{2}\%$) wild oats, a separate return will be made for the wild oats, after deducting therefrom one-half of one per cent ($\frac{1}{2}\%$) of the gross weight of the car for waste.

On oats and barley carrying a dockage of over five per cent (5%) after deducting one-half of one per cent ($\frac{1}{2}\%$) of the gross weight of the car for waste, a return will be made for the balance of the screenings.

On rye and flax carrying a dockage of over five per cent (5%) after deducting one per cent (1%) of the gross weight of the car to cover outward dockage and waste in cleaning, a return will be made for the balance of the screenings.

If disposition of screenings covered by outstanding returns is not received within thirty (30) days from the date of unloading, they may be disposed of for account of whom it may concern.

The holder of warehouse receipts or shut-outs covering dockage shall be entitled to receive such average quality of screenings as shall be determined by the Inspection Department in accordance with sample tests which shall be made in such manner and when deemed necessary by said department.

CLEANING CHARGES

On wheat, for removal of dockage, other than domestic grain, there will be cleaning charges as follows:—

Dockage under 3%—no charge.

Dockage 3% to 5% inclusive—one-half cent ($\frac{1}{2}c.$) per bushel.

Dockage $5\frac{1}{2}\%$ to 10%—one cent (1c.) per bushel.

Dockage over 10%—one and one-half cents ($1\frac{1}{2}c.$) per bushel.

On wheat carrying a return of wild oats computed on the gross weight of the car, an additional separating charge of one-half cent ($\frac{1}{2}c.$) per bushel.

On oats, barley and rye, for removal of dockage other than domestic grain, there will be cleaning charges as follows:—

On all cars carrying a dockage of:—

Up to and including 5 per cent—no charge.

Over 5 per cent and up to 10 per cent, oats and barley,—one cent (1c.) per bushel.

Over 5 per cent and up to 10 per cent rye—one and one-half cents ($1\frac{1}{2}c.$) per bushel.

Over 10 per cent, oats and barley—one and one-half cents ($1\frac{1}{2}c.$) per bushel.

Over 10 per cent rye—two cents (2c.) per bushel.

On all grain carrying a return of other domestic grain (C.C. Cars) computed on the gross weight of the car additional separating charges as follows:—

Dockage up to 10% (Domestic Grain)—three cents (3c.) per 100 pounds.

Dockage over 10% and up to 15%—four cents (4c.) per 100 pounds.

Dockage over 15%—five cents (5c.) per 100 pounds.

Flax cleaned from any other grain containing broken particles that cannot be separated, shall be classified as "Flax and Broken Wheat."

On Flax for removal of dockage, other than domestic grain, there will be cleaning charges as follows:—

On flax carrying a dockage of:—

Up to and including 5 per cent—no charge.

Over 5 per cent and up to 10 per cent—one and half cents (1½c.) per bushel.

Over 10 per cent (2c.) two cents per bushel.

SPECIAL SEPARATIONS

Separations of mixed grains, or straight grade grains to improve grade, computed on gross weight of car, Five cents (5c.) per one hundred pounds.

On all such separations a deduction of one per cent (1%) of the gross weight will be made to cover invisible loss in separation.

DRYING CHARGES

On tough grain—three cents (3c.) per bushel.

On damp or wet grain—five cents (5c.) per bushel.

Allowance for Invisible Loss and Shrinkage on All Cars

On all grain received, deductions from the gross weight of each car to cover invisible loss and shrinkage in handling will be made as follows:—

Wheat	30 pounds per car
Oats	50 pounds per car
Barley	50 pounds per car
Mixed grain	50 pounds per car
Rye	56 pounds per car
Flax	56 pounds per car

ALL CHARGES

All charges for cleaning, drying or other treatment will be computed on gross weight of car, for elevation and storage on net weights. All charges accruing after issue of initial completed outturn and expense bill will follow the grain. All charges whatsoever must be paid before shipment.

BULKHEADS

On bulkheads for their removal and other additional expense in handling and unloading car, five dollars (\$5) per bulkhead.

UNLOADING SACKED GRAIN

A charge of five cents (5c.) per sack will be made for unloading all sacked grain.

SACKING GRAIN

Sacking grain and loading to cars or other vehicles will be subject to rate agreed upon.

PREPARING CARS FOR LOADING

When paper is used in preparing cars, there will be a charge of four dollars (\$4) for each car.

UNSPECIFIED GRAIN

Unspecified grain will be only received, stored and treated subject to special charges to be agreed upon at the time, subject to the approval of the Board of Grain Commissioners.

Upon the application to the board of any terminal elevator, the above tariff may be reduced in so far as that elevator is concerned, but such reduced charges must apply to all grain received at such elevator during the crop year 1930-31.

REGULATION No. 7, 1930

At a regular meeting of the Board of Grain Commissioners for Canada held at Winnipeg on the twelfth day of September, 1930, the said board did make the Regulation as set out hereunder, in accordance with section 15 (r) and 134 of the Canada Grain Act, 1930.

MAXIMUM TARIFF OF CHARGES TERMINAL ELEVATORS WEST
OF CALGARY, ALTA., FOR THE CROP YEAR ENDING
AUGUST 31, 1931

Subject to the capacity of the elevator and the nature of its equipment shipments will be received upon the following terms and conditions and under the provisions of the Canada Grain Act, 1930.

ELEVATION CHARGES

On straight grade, tough, damp or wet grain, not otherwise specified, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days:—

Flax—two cents (2c.) per bushel.

Rye—one and one-half cents ($1\frac{1}{2}$ c.) per bushel.

Wheat, oats and barley—one and one-quarter cents ($1\frac{1}{4}$ c.) per bushel.

All tough, damp, wet, condemned, heating, heated or fireburnt grain may always be refused, if received and stored it will only be at the owners risk of deterioration and under special contract except that tough grain will be received and stored under the terms and conditions applied to straight grade grain as provided in the Canada Grain Act.

On mixed grains, handled as mixtures, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days, two cents (2c.) per hundred pounds.

On screenings, receiving, elevating, shipping, storing and insurance against fire for the first fifteen days, three cents (3c.) per hundred pounds.

STORAGE CHARGES

On straight grade and tough grain, not otherwise specified, including insurance against fire, for each succeeding day or part thereof after the first fifteen days, one-thirtieth of one cent ($1/30$ c.) per bushel.

On mixed grain handled as mixtures, storage, including insurance against fire, for each succeeding day or part thereof, after the first fifteen days, two-thirtieths of one cent ($2/30$ c.) per hundred pounds.

On screenings, storage, including insurance against fire, for each succeeding day or part thereof, after the first fifteen days, one-tenth of one cent ($1/10$ c.) per hundred pounds.

SCREENINGS

On wheat carrying a dockage of three per cent (3%) or more, after deducting one-half of one per cent ($\frac{1}{2}$ %) of the gross weight of the car for waste, a return will be made for the balance of the screenings.

On wheat carrying a dockage containing three and one-half per cent ($3\frac{1}{2}$ %) wild oats a separate return will be made for the wild oats, after deducting therefrom one-half of one per cent ($\frac{1}{2}$ %) on the gross weight of the car for waste.

On oats and barley, carrying a dockage of over five per cent (5%) after deducting one-half of one per cent ($\frac{1}{2}$ %) of the gross weight of the car for waste, a return will be made for the balance of the screenings.

On rye and flax carrying a dockage of over five per cent (5%) after deducting one per cent (1%) of the gross weight of the car to cover outward dockage and waste in cleaning, a return will be made for the balance of the screenings.

If disposition of screenings covered by outstanding returns is not received within thirty (30) days from the date of unloading, they may be disposed of for account of whom it may concern.

The holder of warehouse receipts of shut-outs covering dockage shall be entitled to receive such average quality of screenings as shall be determined by the Inspection Department in accordance with sample tests which shall be made in such manner and when deemed necessary by said Department.

CLEANING CHARGES

On wheat, for removal of dockage, other than domestic grain, there will be cleaning charges as follows:—

Dockage under 3%—no charge.

Dockage 3% to 5% inclusive—one-half cent ($\frac{1}{2}$ c.) per bushel.

Dockage 5½% to 10%—one cent (1c.) per bushel.

Dockage over 10%—one and one-half cents ($1\frac{1}{2}$ c.) per bushel.

On wheat carrying a return of wild oats computed on the gross weight of the car, an additional separating charge of one-half of one cent ($\frac{1}{2}$ c.) per bushel.

On oats, barley and rye, for removal of dockage, other than domestic grain, there will be cleaning charges as follows:—

On all cars carrying a dockage of:—

Up to and including 5 per cent—no charge.

Over 5 per cent and up to 10 per cent, oats and barley—one cent (1c.) per bushel.

Over 5 per cent and up to 10 per cent rye—one and one-half cents ($1\frac{1}{2}$ c.) per bushel.

Over 10 per cent, oats and barley—one and one-half cents ($1\frac{1}{2}$ c.) per bushel.

Rye—two cents (2c.) per bushel.

On all grain carrying a return of other domestic grain (C.C. Cars) computed on the gross weight of the car additional separating charges as follows:—

Dockage up to 10% (Domestic Grain)—three cents (3c.) per 100 pounds.

Dockage over 10% and up to 15%—four cents (4c.) per 100 pounds.

Dockage over 15%—five cents (5c.) per 100 pounds.

Flax cleaned from any other grain containing broken particles that cannot be separated, shall be classified as "Flax and Broken Wheat."

On flax for removal of dockage, other than domestic grain there will be cleaning charges as follows:—

On flax carrying a dockage of:—

Up to and including 5 per cent—no charge.

Over 5 per cent and up to 10 per cent—one and one-half cents ($1\frac{1}{2}$ c.) per bushel.

Over 10 per cent—two cents (2c.) per bushel.

SPECIAL SEPARATIONS

Separations of mixed grains, or straight grade grains to improve grade, computed on gross weight of car, five cents (5c.) per one hundred pounds.

On all such separations a deduction of one per cent (1%) of the gross weight will be made to cover invisible loss in separation.

DRYING CHARGES

On tough grain—three cents (3c.) per bushel.

On damp or wet grain—five cents (5c.) per bushel.

Allowance for Invisible Loss and Shrinkage on All Cars

Wheat	30 pounds per car
Oats	50 pounds per car
Barley	50 pounds per car
Mixed grain	50 pounds per car
Rye	56 pounds per car
Flax	56 pounds per car

ALL CHARGES

All charges for cleaning, drying or other treatment will be computed on gross weight of car, for elevation and storage, on net weights.

All charges accruing after issue of initial completed outturn and expense bill will follow the grain. All charges whatsoever, must be paid before shipment.

BULKHEADS

On bulkheads for their removal and other additional expense in handling and unloading cars, \$5 for each bulkhead.

UNLOADING SACKED GRAIN

A charge of five cents (5c.) per sack will be made for unloading all sacked grain.

SACKING GRAIN

For sacking grain the following charges will be made:—

1½c. per bushel on sacks not exceeding 125 pounds.

2c. per bushel on sacks not exceeding 160 pounds.

2½c. per bushel on sacks not exceeding 220 pounds.

For double sacking one cent (1c.) per sack in addition to above.

For sacking screenings a charge of ten cents (10c.) a sack for sacking will be made.

Sacking of screenings will be done only when conditions warrant it, and the Superintendents of such terminal elevators will be the sole judge of this.

Sacks and twine to be furnished by the shipper or supplied at his expense. In case of machine sewing, one-half of one cent (½c.) per sack will be charged for twine.

STENCILLING

For sacking grain the following charges will be made for stencilling.

One-half cent (½c.) per sack.

PREPARING CARS FOR LOADING

When paper is used in preparing cars, there will be a charge of four dollars (\$4) for each car.

UNSPECIFIED GRAIN

Unspecified grain will only be received, stored and treated subject to special charges to be agreed upon at the time, subject to the approval of the Board of Grain Commissioners.

Upon the application to the board of any public or semi-public terminal elevator, the above tariff may be reduced in so far as that elevator is concerned but such reduced charges must apply to all grain received at such elevator during the crop year 1930-31.

Signed this twelfth day of September, 1930.

TRADE AND COMMERCE

REGULATION No. 8, 1930

At a regular meeting of the Board of Grain Commissioners for Canada held at Winnipeg on the twelfth day of September, 1930, the said board did make the regulation as set out hereunder, in accordance with section 15 (t) and section 138 (6) of the Canada Grain Act, 1930:

INSPECTION AND GRADING OF GRAIN AFTER TREATMENT

When grain which has been inspected into a public, or semi-public elevator with a grade other than 1 Hard, 1, 2 or 3 Northern by reason of its condition or otherwise has been treated, the Chief Inspector may, upon the request of the operator or manager, inspect such grain in such a manner as he may determine and he may issue therefor an inspection certificate for the grade to which such grain shall then belong by reason of its treatment, which grain shall then be binned according to its grade.

The Chief Inspector shall also, in conjunction with this inspection, issue a transfer certificate for a similar quantity and grade of grain, a copy of which certificate shall be sent to the registrar and to the statistician, who will record the transaction in their books.

Upon the completion of this transaction, the operator or manager of the elevator may issue warehouse receipts for such quantity and grade on his cancelling a like quantity of the grades which have been treated.

Signed this twelfth day of September, 1930.

(Signed) E. B. RAMSAY,
Chief Commissioner.

(Signed) D. A. MACGIBBON,
Commissioner.

(Signed) C. M. HAMILTON,
Commissioner.

(Signed) J. RAYNER,
Secretary.

REGULATION No. 9, 1930

At a regular meeting of the Board of Grain Commissioners for Canada, held at Winnipeg on Tuesday, the twenty-third day of September, 1930, the said board did make the regulation as set out hereunder, in accordance with section 110 (2) and (3) of the Canada Grain Act, 1930.

STORING OF AND SUBMISSION FOR EXAMINATION OF COUNTRY
ELEVATOR SAMPLES OF SPECIAL BIN GRAIN

1. The receptacle or receptacles containing samples of Special Bin or subject to Grade and Dockage Grain, drawn in accordance with the Regulations of the board, shall, after being locked by the owner of the grain, be kept by the Warehouseman in a locked cabinet or storeroom, the key of which shall be kept by the Warehouseman.

2. On the request made to the manager of a country elevator, within fifteen (15) days after the receipt of the Inspection Certificate covering a shipment from a country elevator of Special Bin Grain, by the owner of the grain or his

agent who considers that the grade placed on his grain is not satisfactory, or who considers that the identity of his grain has not been preserved, both parties thereupon shall forward, charges prepaid and properly sealed, to the Chief Grain Inspector, the receptacle containing the sample taken at the time of the receipt of the grain in the country elevator. The owner of the grain shall forward, under separate cover, to the Chief Inspector, the key of the lock placed on the receptacle. The manager of the elevator shall inform the Chief Inspector by letter that the sample is being forwarded and shall request him to compare the sample forwarded with the sample taken by the Inspection Department from the car at the time of inspection and to state whether, in his opinion, the identity of the grain has been preserved.

3. The Chief Inspector shall compare the two samples of grain and advise the Manager of the elevator and the owner of the grain of his opinion as to whether or not the identity of the grain has been preserved. In cases where the Chief Inspector is of the opinion that the identity has not been preserved, he shall inform the parties concerned of the grade of the sample forwarded from the elevator.

4. If, after the receipt of this advice from the Chief Inspector, the owner of the grain and the manager of the elevator cannot come to an amicable settlement, a complaint shall be made to the Board by either of the parties concerned and the Board shall make an order for settlement.

5. The Chief Inspector shall preserve both the elevator sample and the sample drawn at the time of inspection, *for such period of time* as he considers necessary and convenient.

Signed this twenty-third day of September, 1930.

(Signed) E. B. RAMSAY,
Chief Commissioner.

(Signed) C. M. HAMILTON,
Commissioner.

(Signed) J. RAYNER,
Secretary.

REGULATION No. 10, 1930

At a regular meeting of the Board of Grain Commissioners for Canada, held at Winnipeg on Tuesday, the twenty-third day of September, 1930, the said board did make the regulation as set out hereunder, in accordance with section 112 of the Canada Grain Act, 1930.

PROCEDURE FOR FORWARDING TO AND EXAMINATION AND INSPECTION BY THE CHIEF INSPECTOR OF SAMPLES OF GRAIN RECEIVED IN COUNTRY ELEVATORS, SUBJECT TO INSPECTOR'S GRADE AND DOCKAGE

1. The owner of the grain and the manager or operator of the country elevator shall jointly forward the sample to the Chief Inspector.

2. On receipt of samples of grain from the manager or operator of a country elevator, or the owner of the grain, with advice as to the names of the elevator and the owner of the grain and that such grain has been received at the elevator subject to inspector's grade and dockage, the Chief Inspector shall, as soon as

practical, examine such sample or samples of grain and shall make out, in writing, a statement of his decision and shall transmit a copy thereof by mail to each of the parties to the disagreement, preserving the original together with the sample on file in his office.

3. The decision of the Chief Inspector in such cases shall be conclusive.

Signed this 23rd day of September, 1930.

(Signed) E. B. RAMSAY,
Chief Commissioner.

(Signed) C. M. HAMILTON,
Commissioner.

(Signed) J. RAYNER,
Secretary.

REGULATION No. 11, 1930

At a regular meeting of the Board of Grain Commissioners for Canada, held at Winnipeg on the twenty-third day of September, 1930, the said board did make the regulation set out hereunder in accordance with section 15 (h) and 48, of the Canada Grain Act, 1930.

PROCEDURE FOR APPEALS FROM INSPECTING OFFICERS TO GRAIN APPEAL TRIBUNALS

1. The freshly drawn or unload sample, if any, shall be placed before the Appeal Tribunal to examine and assign the proper grade.

2. When forwarding samples to the Appeal Tribunal the Inspecting Officer shall inform the Secretary of the Appeal Tribunal of the initial and car number of the car from which the sample was taken, the grade assigned to the sample by the Inspecting Officer and, in cases of samples taken at unloading, the name and location of the elevator where the car is being or has been unloaded.

3. The results of all appeals to Appeal Tribunals shall immediately be notified by the Secretary of the Appeal Tribunals to the Inspecting Officer who submitted the sample or samples to the Appeal Tribunal. The Inspecting Officer will then immediately advise the principal Inspecting Officer at the terminal point who will advise the operator at the elevator where the car is being or has been unloaded.

4. The Secretary of the Appeal Tribunal shall notify the Statistician of the Board of Grain Commissioners daily of all changes made in grade and/or dockage by the Appeal Tribunal stating the initial and number of the car which the sample represents, the grade assigned by the Inspecting Officer, the grade assigned by the Appeal Tribunal, and when known, the name of the elevator where the car is being or has been unloaded.

5. In cases where the identity of the grain has not been preserved appeals from the decision of the Inspecting Officer to the Appeal Tribunals may be made within thirty (30) days from date of unloading, if, at unloading a sample of the grain was taken by means of an automatic sampler, and such sample has been preserved. Applications for such appeals shall only be made by the owner of the grain or his agent in whose possession the grain is at the time of the application.

In all other cases where the identity of the grain has not been preserved and a sample was not taken at the time of unloading by means of an automatic sampler, no appeal shall be entertained except with the express authority of the board.

6. When in cases where the identity of the grain has not been preserved changes in grade and/or dockage are made as the result of an appeal to a Grain Appeal Tribunal, advice of such change will be given by the Inspecting Officer who submitted the sample or samples to the Appeal Tribunal to the principal inspecting officer at the terminal point who will then advise the operator of the elevator where the grain was unloaded. The elevator operator will issue a corrected outturn.

The principal Inspecting Officer at the terminal point will advise the Deputy Registrar of all such changes and on the presentation for cancellation of the original warehouse receipt, a corrected warehouse receipt will be registered by the Deputy Registrar.

7. No application for appeal to a Grain Appeal Tribunal can be considered after the Warehouse Receipt has been surrendered to the Registration Department for cancellation.

8. In all cases where any changes are made as the result of an Appeal to a Grain Appeal Tribunal Inspection records will be corrected accordingly and corrected certificates issued bearing the date on which the change was made.

9. Every application for appeal to a Grain Appeal Tribunal shall be accompanied by a fee of Three Dollars (\$3).

When the decision of the Inspecting Officer is upheld by the Grain Appeal Tribunal this fee shall be retained by the Board of Grain Commissioners.

In cases where the decision of the Inspecting Officer is not upheld the fee shall be returned to the applicant.

Signed this twenty-third day of September, 1930.

(Signed) E. B. RAMSAY,
Chief Commissioner.

(Signed) J. RAYNER,
Secretary.

(Signed) C. M. HAMILTON,
Commissioner.

REGULATION No. 12, 1930

At a regular meeting of the Board of Grain Commissioners for Canada, held at Winnipeg on the second day of October, 1930, the said board did make the regulation as set out hereunder, in accordance with sections 15 (o) and 113, of the Canada Grain Act, 1930.

INTERIM ELEVATOR RECEIPT FOR GRAIN STORED AT A PUBLIC COUNTRY ELEVATOR FOR CLEANING

When grain is stored in a public country elevator for cleaning under section 113 of the Canada Grain Act, 1930, until such time as it can be cleaned, the elevator operator or manager shall issue in respect thereof a Special Bin Ticket (Form No. 1, Schedule Three of the Canada Grain Act, 1930) surcharged.

"To be cleaned before being shipped."

After the grain is cleaned such ticket shall be surrendered by the holder thereof to the operator or manager who shall then issue such ticket or tickets as may be requested or the circumstances determine.

Signed this second day of October, 1930.

(Signed) E. B. RAMSAY,
Chief Commissioner.

(Signed) J. RAYNER,
Secretary.

(Signed) C. M. HAMILTON,
Commissioner.

REGULATION No. 13, 1930

At a regular meeting of the Board of Grain Commissioners for Canada, held in Winnipeg on the second day of December, 1930, the said board did make the regulation as set out hereunder, in accordance with section 15 (g) of the Canada Grain Act, 1930:—

FEES

The following fees shall be payable for the various services performed by the officers and employees of the board, and shall be paid on demand by the party or parties specified hereunder:—

INSPECTION OF GRAIN

In Carload Lots—One Dollar (\$1) per car

Payable by the railway company in whose possession the grain is at the time of inspection, except that the fees for cars arriving at Vancouver, originating on lines other than the Canadian National or the Canadian Pacific Railways, shall be paid by the manager of the elevator at which the car is unloaded.

Fees for cars ex elevators at Fort William-Port Arthur and Vancouver, B.C., shall be paid by the manager of the elevator loading the grain.

Cargoes—One Dollar (\$1) per thousand (1,000) bushels

This fee shall be paid by the manager of the elevator loading the grain.

When a cargo certificate is surrendered with a request that it be split into certificates covering smaller denominations, a fee of ten cents (10 cents) per split will be charged. This fee shall be payable by the party or parties requesting the split.

Inspection after Treatment in Elevators

When inspection is requested in public or semi-public elevators on grain which has been treated for the purpose of binning with a straight grade of the first four (4) grades in Schedule 1 of the Canada Grain Act, 1930, weighed for the annual stock-taking, a fee of fifty cents (50 cents) per thousand bushels, payable by the manager of the elevator, will be charged.

Wagon or Truck Loads

When grain is delivered to or loaded out of terminal elevators at interior points or points in British Columbia, in wagon or truck loads, a fee at the rate of one dollar (\$1) per thousand bushels, with a minimum charge of ten cents (10 cents) will be charged. This fee is payable by the manager of the elevator receiving or loading out the grain.

Certificates on Unofficial Samples

On samples not officially drawn and on which an inspection certificate is requested, a fee of one dollar (\$1) per sample, payable at the time of inspection by the party or parties requesting the inspection, will be charged.

WEIGHING OF GRAIN

*In Car-load Lots—One Dollar (\$1) per car**Cargoes—One Dollar (\$1) per thousand (1000) bushels*

On cars unloaded at Fort William and Port Arthur, these fees shall be payable by the railway company in whose possession the grain is at the time of inspection.

On cars ex elevators at the Head of the Lakes and into and out of elevators at all inspection points west of Fort William, this fee shall be payable by the elevator company where the grain is weighed.

Fees for cargoes shall be payable by the manager of the elevator loading the grain.

Weigh-up

When weighing service is requested on weigh-up at semi-public or private terminal elevators, except on grain of the first four (4) grades shown in Schedule 1 of the Canada Grain Act, 1930, weighed for the annual stock-taking, a fee of fifty cents (50 cents) per thousand bushels, payable by the elevator company will be charged.

Weighing after Treatment

When grain which has been treated in a public or semi-public elevator is weighed in connection with the inspection for the purpose of binning with a straight grade of the first four (4) grades as shown in Schedule 1 of the Canada Grain Act, 1930, a fee of fifty cents (50 cents) per thousand bushels, payable by the elevator company, will be charged.

SPECIAL WEIGHING AND INSPECTION SERVICE

At all private, mill and manufacturing elevators where inspection and weighing services are required full time and the fees for such inspection and weighing services calculated at the above rates for inspection and weighing, as the case may be, do not cover the salaries paid by the board to the employees of the board for the time they are engaged at the elevator, such elevator shall be liable for the difference between the salaries so paid and the amount due calculated at the above rates.

Accounts shall be rendered and paid monthly. The excess cost of carrying out this arrangement shall be adjusted at the end of each crop year, namely August 31.

When casual weighing or inspection service is required at private, mill and manufacturing elevators, a charge of one dollar (\$1) per hour per employee who is engaged on this work, will be made.

CONDITION REPORTS

A fee of twenty-five cents (25c.) shall be paid by the applicant for each condition report requested.

UNLOAD SAMPLES

A fee of twenty-five cents (25c) to cover express charges shall be paid by the applicant for each unload sample requested to be forwarded to the primary inspection point for the purpose of reinspection or appeal in cases where the original grade placed on the sample is upheld on reinspection or appeal.

Signed this second day of December, A.D. 1930.

(Signed) E. B. RAMSAY,
Chief Commissioner.

(Signed) D. A. MACGIBBON,
Commissioner.

(Signed) J. RAYNER,
Secretary.

DOMINION OF CANADA

ANNUAL REPORT

OF THE

DEPARTMENT OF THE INTERIOR

FOR THE

FISCAL YEAR ENDED MARCH 31, 1930

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1931

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I.,
G.C.M.G., G.C.I.E., G.B.E., Governor General and Commander in Chief
of the Dominion of Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

The undersigned has the honour to lay before Your Excellency the report of the transactions of the Department of the Interior for the fiscal year ended March 31, 1930.

Respectfully submitted,

THOMAS G. MURPHY,
Minister of the Interior.

OTTAWA, November 17, 1930

REPORT OF THE DEPARTMENT OF THE INTERIOR

1929-30

Honourable Thomas G. Murphy,
Minister of the Interior,
Ottawa.

SIR,—I have the honour to submit the fifty-seventh annual report of the Department of the Interior for the fiscal year ended March 31, 1930.

During the period under review considerable advance was made toward the completing of arrangements for the transfer to the western provinces of the natural resources within their boundaries, but the administration remained wholly with the Department throughout the fiscal year. Broadly speaking, except for the last few months, settlement and development of all kinds went forward at a more rapid pace than in the preceding year. However, this increased activity, gratifying as it was in itself, did not alter the relative proportions of the different divisions of the work of the Department; for it must be borne in mind that services rendered by the Department of the Interior have not, for a good many years, been confined to the duties directly connected with the management of the federal domain in the western provinces. Even when the transfer is completed the Department will directly control in the Northwest Territories, Yukon Territory and National Parks an area of 1,528,000 square miles, almost two-fifths of the whole Dominion, and will also be responsible for the carrying on of the general work of conserving all natural resources placed upon it in 1921, when, at the direction of Parliament, it took over the work of the Commission of Conservation.

In the work of the Dominion Lands Administration during the fiscal year there was an increase of 1,347 in the total number of homestead entries granted, as compared with 1928-29. While the total for this year does not compare with the figures for the years of the decade preceding the war this upward trend is a satisfactory indication of renewed interest in land settlement. There was a general auction sale of school lands in Saskatchewan and smaller sales in Manitoba and Alberta and satisfactory prices were realized. Farmers and ranchers are making increased use of Dominion lands for the grazing of stock. Returns show an increase over 1928-29 of over eighty-six thousand head of live stock grazing on Dominion Government leaseholds.

There was an expansion in all branches of the mining industry in Western Canada. The rapid extension of the Turner Valley oil and gas field was one of the outstanding features and a production of well over a million barrels of petroleum was attained in the year. The bringing in of the large number of producing wells in the Turner Valley created a problem in regard to the disposal of surplus gas. The burning of such gas has taken place since 1924, but until lately it was done only for short periods in summer when the demand for gas in the cities and towns was low. So soon as the waste became continuous, joint action was decided upon by the Dominion and Alberta Governments, and a committee was appointed to investigate the situation. In its report the committee stated that the only solution that would make conservation possible was a recognition of the fact that

Turner Valley was a gas field and the formulation of rigid regulations for the purpose of controlling all phases of the gas-producing industry. The problem is still receiving consideration. In the matter of mining for metallic ores efforts were made to investigate those deposits previously located in northern Manitoba and Saskatchewan. The trend of the search for minerals appears to have been northwards, several large companies having undertaken a vigorous prospecting program in the Northwest Territories, which are being closely studied by organized expeditions based on aerial transport. However, notwithstanding the advances in the production of oils and metals, coal mining still remains the major mining industry on Dominion lands, and the amount of coal mined compared favourably with that for 1928-29. The coming into force of the new Quartz Mining Regulations added to the duties of the Supervisory Mining Engineer and his staff, entailing as it did the covering by the mining inspectors of large areas in northern and eastern Manitoba, and northern Saskatchewan, and from Hudson bay to Great Slave lake in the Northwest Territories.

The Forest Service had a season of great activity. Unusual climatic conditions during the winter of 1928-29 and the spring and summer of the following year were responsible for the fact that the forest fire situation from western Ontario through to the Pacific coast was one of the severest experienced since forest-fire protection was organized. While losses were greater than the average of the preceding five years, they were undoubtedly kept below what otherwise they would have been by the efficient organization maintained for fire prevention and fire suppression. There was a slight decrease in timber sales but there was much activity in other methods of timber disposal, and all the minor lines show an increase.

During the year a co-operative arrangement was effected by the Dominion Government and the provinces looking to a national inventory of forest resources. The Forest Service, besides working in the Prairie Provinces, has undertaken the work of compiling the returns for the whole Dominion.

Substantial progress has been made in research both on its silvicultural and industrial sides, in the latter especially in regard to pulp and paper. Important other research fields are those of the fundamental problems of forest protection from fire, the rates of growth of Canadian tree species and the better utilization of raw materials. The work of distributing trees to prairie farmers for the planting of shelterbelts continues to expand. Over 8,750,000 trees were sent out in the year to nearly 7,500 farmers and the plantations both of this and of previous years made good growth. The establishment of gardens and orchards in the shelter of these windbreaks is an important feature of prairie life. The collection of tree seed was carried on in the different provinces and over five tons was extracted and distributed, most of it to Great Britain, Australia, and New Zealand.

Steady progress was maintained during the year in the expansion and development of Canada's National Parks system. The outstanding event of the year was the acquiring of two new areas, one in Manitoba, and the other in Ontario. The Riding Mountain national park in the province of Manitoba covers an area of approximately 1,100 square miles. The other reservation, Georgian Bay Islands park, consists of a series of small islands in the Georgian Bay district of Ontario, the largest of which, Beausoleil island, is not only eminently suited as a summer resort, but is rich in legendary and historic interest.

There was a most satisfactory increase in the amount of motor travel to the different parks, over 70,000 more tourists having visited them than in the preceding year. A main factor in the steady increase of tourist travel is the fine system of trails and highways maintained in the parks. The most important highway development during the past year was the commencement of construction of the Big Bend highway between Donald and Revelstoke, B.C.

A revision of the boundaries of the parks on the eastern slope of the Rockies has been in progress. During 1927 an investigation of the eastern areas of Banff and Jasper national parks was conducted to determine the most suitable method of re-locating the boundaries from a standpoint of travel, and the preservation of wild life.

Through the establishment of an adequate system of game patrols and enforcement of the regulations, the increase in wild life has been most gratifying. Native species have re-established their numbers to such an extent that the parks are becoming more and more the wild-life reservoirs of the country.

The protection of migratory birds is a matter which receives the careful consideration of the Department, and in June last amendments were made to the regulations based on the *Migratory Birds Convention Act* following receipt of suggestions from the provincial game officers, and the chief federal migratory bird officers.

The Historic Sites and Monuments Board marked many new sites of national interest during the past year, and a great deal of restorative work was carried out in connection with the larger sites already controlled.

The past year was one of great activity in the various phases of the work of the Dominion Water Power and Reclamation Service. Water-power, which has given such impetus to our industrial life, has developed to an extent that a few years ago would have been considered phenomenal. The new construction during the year 1929 brought the total installed horse-power to 5,727,600, and the completion of work now under way will further increase this imposing figure. Developments cover practically all the provinces and all lines of industry, with a marked widening of the use of power in the domestic, municipal, mining, and agricultural fields. In the year under review, the three Prairie Provinces made a most marked advance in water-power development. Interim licences were in effect covering the Ghost site on the Bow river in Alberta, the Island Falls site on the Churchill river in Saskatchewan, and the Seven Sisters, and the Slave Falls sites both on the Winnipeg river in Manitoba. In Canada generally hydro-electric development showed no signs of slackening. Construction actually in progress should add an installation of 1,600,000 h.p. within the next three years.

International waterway matters continued in an increasing degree to engage the attention of the Branch. The Convention and Protocol signed between Canada and the United States, providing for the construction of remedial works at Niagara falls for the preservation and enhancement of their scenic beauty, was ratified by the Dominion Parliament on May 20, 1929. The Convention awaits the ratification of the United States Senate. Matters concerning other boundary waters were also dealt with.

The Dominion Hydrometric Survey embraces stream measurement throughout Canada. The records are brought together in one central agency which attends to the compilation and dissemination of stream-flow data. The uses to which the records are put are primarily in connection with water-power development and irrigation projects.

Irrigation work was pursued energetically, a reclassification of lands in the major projects was continued, together with studies of more efficient irrigation methods as applied to sugar beet growing, and other agricultural problems.

Great interest and activity was manifested in Northern Canada during the past fiscal year. The tremendous advances in transportation and communication made possible by the aeroplane and the wireless have pushed forward exploration and development into regions hitherto practically inaccessible. The possibilities of our far northern possessions as a great mining area have already attracted widespread attention, and many mining companies financially well supported are carrying out an extensive program of prospecting, and aerial

exploration for minerals. The North West Territories and Yukon Branch is charged with the responsibility of carrying out the governmental policy of broader development activities, and the present year has been an unusually active one in administration, exploration, and the dissemination of knowledge concerning the territory under its jurisdiction.

The annual expedition to the posts in the Canadian Arctic sector was carried out successfully on board the ss. *Beothic*. All posts were reprovisioned and changes effected in the personnel.

During the year a field inspection of the Mackenzie District of the North West Territories and of Yukon Territory was made by the Director of the Branch. In accordance with the policy of the Department to maintain careful supervision of the health and welfare of the natives of the region, medical services have been brought to a high state of efficiency, and several new medical stations were established during the year. Medical stations are now located at Aklavik, at the mouth of the Mackenzie; Coppermine, on the Arctic coast; Chesterfield, on the west side of Hudson bay; and Pangnirtung, on Baffin island. By co-operation with the Department of Indian Affairs, medical officers are also maintained at Fort Smith, Resolution, and Simpson, while assistance is given to the Anglican and Roman Catholic mission hospitals at other important centres.

A feature of the exploratory work completed during the year was the discovery of the breeding grounds of the blue goose on Baffin island, and the examination and patrol of the Thelon Game Sanctuary east of Great Slave lake. The selection of the 3,000 Alaskan reindeer intended as the nucleus of herds to be established for the benefit of the natives in Arctic Canada was made during December, 1929, and the overland movement to the Mackenzie delta begun.

During the year, seven meetings of the Northwest Territories Council were held, and many important matters pertaining to development and to the maintenance of the native population were dealt with.

The revenue from the administration of the *Northwest Game Act* increased to the extent of \$15,619.31 over the amount received during the previous year.

All branches of survey work—geodetic, topographic, aerial, and boundary—carried on by this Department are co-ordinated under the Surveys Bureau, in charge of the Director General of Surveys.

Every phase of the work of the Geodetic Survey was advanced during the year. The geographical positions of an increased number of geodetic stations were determined with the highest attainable accuracy. These are required as basic control for Canadian mapping operations. Triangulation nets and precise traverses were extended and base lines for length control in triangulation were measured with first-order accuracy. Bench-marks were established over an increased mileage along railways and highways throughout Canada. Field parties of the Levelling Division operated in five provinces.

Steady progress is being made by the Topographical Survey in the mapping of the Dominion. The field work of this branch includes ground surveys, aerial surveys, legal surveys, land classification work, and interprovincial boundary surveys. The work of issuing maps of the newer parts of Canada, where development is particularly active, is being greatly assisted by the use of aerial photographs. Field operations were carried on in all the provinces and in the Northwest and Yukon Territories. The area covered by newly issued maps was 106,302 square miles. The Physical Testing Laboratory carried out a number of important investigations in addition to its regular work of testing, readjustment, and certification of the various scientific instruments.

The importance of aerial photography in the production of maps and in furthering exploration and development is seen in the increasing demands for this service. During the past year 48,025 square miles were covered by oblique and 26,230 square miles by vertical photographs.

The Canadian and United States members of the International Boundary Commission held two conferences during the past fiscal year. The first took place in Washington in April, when a division of the field work to be done during the summer was made, and the second in Ottawa in November, when the joint reports required by the treaty of 1908 were considered.

The Dominion Observatory at Ottawa and the Dominion Astrophysical Observatory at Victoria, B.C., each carried out a very full program of observations. Investigations were continued in the fields of seismology, terrestrial magnetism, and stellar spectra photometry. A number of scientific publications were issued. The Astrophysical Observatory completed the program of observation of Wolf-Rayet stars, begun in 1927.

The work of the National Development Bureau, formerly designated the Natural Resources Intelligence Service, expanded along its several lines of activity. In the field of industrial surveys special investigations were carried out in regard to the utilization of raw materials and products of specified areas. During the past fiscal year, departmental co-operation was solicited by the boards of trade of nearly all the principal cities of the western provinces, and a comprehensive industrial survey was made of the Border Cities district in Ontario. Numerous inquiries were received during the year both from this country and abroad, covering a wide range of resources and industrial subjects. The domestication of fur-bearing animals has centred interest in Canada's fur resources and, based on the information gathered on this important industry, a number of reports were issued.

Tourist traffic is now recognized as one of the major factors in Canadian development. In order to maintain and increase this important industry every effort is made to furnish the prospective tourist with authentic information in regard to Canada's recreational facilities. By means of a wide distribution of informative publications, co-operation was maintained with practically all trade and travel organizations of importance in different countries.

The importance of economic geography in relation to national progress is now generally recognized. Extensive investigations in this field were carried out, as a result of which many of the series of economic maps were revised, and a number of new maps issued. Considerable progress was made in the preparation and issue of official maps of Canada.

The technical plant is increasingly made use of by this and other federal departments. The photographic library covers all fields of development in Canada and is constantly kept up to date. Photographs for reproduction purposes are in great demand by syndicate newspaper services, chambers of commerce, trade commissioners, and other organizations at home and abroad.

Outlines of the work of the several branches of the department follow.

DOMINION LANDS ADMINISTRATION

Lands Patents

Letters Patent.—The number of letters patent issued during the fiscal year was 5,997, covering an area of 832,665 acres, made up by provinces as follows:—

Province	Patents	Acres
Manitoba.....	604	81,898
Saskatchewan.....	2,621	376,784
Alberta.....	2,338	349,240
British Columbia.....	425	24,558
Yukon Territory.....	2	180
Northwest Territories.....	7	5
Totals.....	5,997	832,665

DEPARTMENT OF THE INTERIOR

Homestead Entries.—Seventeen thousand five hundred and four (17,504) homestead entries (including 4,952 second homesteads) were granted during the year, aggregating an approximate area of 2,800,640 acres, being an increase of 1,347 in the number of homesteads granted as compared with the previous year.

By provinces the entries were made up as follows: Manitoba, 727; Saskatchewan, 6,089; Alberta, 9,795; British Columbia, 893; total, 17,504.

There were 720 soldier grant entries made during the year, aggregating an approximate area of 115,200 acres, made up by provinces as follows:—

	Number of entries	Acres
Manitoba.....	19	3,040
Saskatchewan.....	224	35,840
Alberta.....	422	67,520
British Columbia (Railway Belt and Peace River Block) ..	55	8,800
Totals.....	720	115,200

There were 4,952 second homestead entries made during the year, aggregating approximately 792,320 acres, made up by provinces as follows:—

	Number of entries	Acres
Manitoba.....	182	29,120
Saskatchewan.....	2,061	329,760
Alberta.....	2,470	395,200
British Columbia (Railway Belt and Peace River Block) ..	239	38,240
Totals.....	4,952	792,320

Refunds.—Value of improvements collected on cancelled homesteads—762 refunds—\$41,447.81.

Newly Surveyed Lands Thrown Open to Homestead Entry.—Newly surveyed lands included in 37 townships were made available for homestead entry as follows:—

Province	Number of townships
Manitoba.....	4
Saskatchewan.....	3
Alberta.....	28
British Columbia.....	2

School Lands

During the fiscal year ended March 31, 1930, school lands were disposed of by public auction and private sales in the provinces of Manitoba, Saskatchewan, and Alberta as follows:—

Province	Area in acres	Value	Average per acre
Manitoba.....	4,230.97	\$ 50,403 19	\$ 11 91
Saskatchewan.....	372,010.73	5,435,353 70	14 61
Alberta.....	28,676.93	345,992 43	12 06

The approximate net areas disposed of to March 31, 1930, after making deductions for cancelled sales and adjustments in regard to changes in area, were as follows:—

Province	Area in acres	Value	Average per acre
Manitoba.....	635,480.74	\$ 6,101,913 80	\$ 9 60
Saskatchewan.....	2,119,796.68	33,198,820 73	15 66
Alberta.....	1,234,647.53	17,554,966 53	14 22

The revenues collected for the fiscal year (less principal moneys and less expenditures) and paid over to the provinces were as follows: Manitoba, \$87.18; Saskatchewan, \$303,535.75; Alberta, \$411,983.77.

The amounts of interest paid in the fiscal year on the investments to the three provinces were as follows: Manitoba, \$294,525; Saskatchewan, \$835,225; Alberta, \$459,175.

Mining Lands

The report of the Mining Lands Division for the fiscal year 1929-30 shows that the total revenue for the year (\$1,638,597.74), was over half a million dollars greater than in 1928-29. The collection of royalty from the petroleum industry began on January 1, 1930, and over \$30,000 was collected on this account during the last three months of the fiscal year.

In the Northwest Territories continued interest was maintained in prospecting for minerals under the provisions of the Quartz Mining Regulations. Development work was done on certain properties situated south of Great Slave lake. New discoveries were made in the vicinity of Great Bear lake and other points. An Order in Council was passed making available for location on July 1, 1930, an area of land in the vicinity of the Coppermine river which had been under reservation for a number of years.

In Yukon Territory the concentrating mill of the Treadwell Yukon Company Limited, operated during the whole year. This is situated at Keno, Mayo district. The value of the minerals produced from this district was over \$2,000,000. Placer mining with dredges and by the hydraulic method of mining continued in Yukon Territory, but the output from quartz mines in the Mayo district now exceeds the value of the production from the placer mines.

The mill of the Central Manitoba Mines Limited, in the province of Manitoba, operated continuously, and that province before the end of another year will witness the completion of the extensive mill and smelter constructed by the Hudson Bay Mining and Smelting Company Limited, to treat the ores from the Flin Flon mine, and this plant will also treat the ores from the Sherritt-Gordon mine.

Owing to new discoveries of oil and to the interest taken by companies from other parts of the world, an increasing interest was manifested in the oil fields of Alberta, but the production of coal from mines in Alberta remained the principal mining industry on Dominion lands.

Timber and Grazing

Due to the unusual circumstances which prevailed during the past fiscal year, and which were particularly felt in the western provinces, there was a decrease of \$256,990.94 in the revenue from timber, grazing, and hay lands as compared with 1928-29. Compared with the previous year, there was a marked advance in the quantities of lumber manufactured, the increase over that of last year being over 60,000,000 feet board measure, but owing to the business depression in the latter part of the year, a large portion of manufactured material remained unmarketed. As a consequence of these conditions, the revenue from licence and permit berths was considerably reduced.

The grazing regulations established in the year 1925 allowing for the granting of twenty-one-year leases have given a decided impetus to stock raising. Stock returns from approximately 95 per cent of the present leaseholders show a number of stock grazing on leaseholds on Dominion lands to be considerably in excess of any previous year.

A continued increase in the number of hay permits issued, together with the number of tons cut, was recorded during the past fiscal year, accounting for an increase in revenue from this source amounting to \$3,799.58 over the previous year.

DEPARTMENT OF THE INTERIOR

Ordinance, Admiralty, and Public Lands

The fiscal year 1929-30 was one of activity from the standpoint of administration, the main efforts being directed towards the securing of information relative to titles and to complete the records it was necessary to conduct investigations in several of the registry offices.

The revenue for the year shows a substantial increase, and from the sale of fractional areas and accrued lands there was derived the sum of \$98,012.90 in comparison with \$52,472.74 for the previous year. The revenue from Ordinance lands amounted to \$30,308.90 an increase of \$5,478.81 over the fiscal year 1928-29.

In the past, grants of land had been made by Parliament to railway companies to aid in the construction of colonization railways, and claims were subsequently made by the companies that they were entitled to the mineral rights, in addition to the surface rights, and the question became the subject of decision by the Imperial Privy Council. As it was ruled that title to the minerals should pass to the aforementioned companies, many difficulties had to be overcome before patents could issue. The completion of this work required considerable research, as the grants amounted to 31,784,610 acres.

New applications to purchase land numbered nearly five hundred, and sales were consummated in 320 cases, covering a total of 12,882 acres.

SUPERVISORY MINING ENGINEER

The fiscal year has been one of great activity in the various fields of mining enterprise which have grown up of late on lands under the administration of the department, namely, those associated with the search for, development and production of metals, coal, petroleum and natural gas. This activity has been particularly marked in the case of metals and oil and gas, which have attracted very great interest on the part of operators, following on the favourable results chronicled in the annual report for 1928-29.

The area over which prospecting for minerals under the Quartz Mining Regulations was carried on was much extended, largely owing to the successful application of the aeroplane both for transport and for reconnaissance purposes. In this manner operations were carried far into the Northwest Territories and a number of interesting mineral occurrences of economic importance were noted. Development work proceeded on a number of properties already acquired, notably in northern Manitoba and Saskatchewan, the construction work at the Flin Flon and Sherritt-Gordon mines, and on the power plant at Island Falls, making marked progress and bearing witness to the importance of these undertakings. The one producing property was that of the Central Manitoba Mines, Limited, at Long lake in the Rice Lake division of the Winnipeg mining district.

The new Quartz Mining Regulations came into force on April 1, 1929, and were found to function smoothly and to receive general approval. To meet the requirements of the growing activity in the Winnipeg district an office, subsidiary to that already in existence at The Pas, was opened at Winnipeg.

Coal mining operations were continued on the same scale as hitherto in Alberta and Saskatchewan. Prospecting in certain areas, notably north of Luscar and on the Kipp-Retlaw extension of the Canadian Pacific Railway, met with success, discoveries in the latter area being brought to the production stage. Briquetting of Saskatchewan coals now appears to be established as the basis of a permanent industry, a ready market being found for the briquettes in Winnipeg and elsewhere.

In connection with petroleum and natural gas, Turner Valley and other areas in Alberta became the scene of great drilling activity, already foreshadowed towards the close of the previous year. Although many of the new wells started were subsequently suspended, the number reaching the limestone, in which occurs the naphtha-laden gas of Turner Valley, enabled the productive area to be much increased. Every well drilled into the limestone encounters gas, the production varying considerably in different wells. The total production of naphtha exceeded one million barrels, this being by far the most important product utilized.

The systematic testing of other areas was prosecuted with equal vigour by means of detailed geological mapping, test drilling, and deep drilling; and geophysical methods of prospecting were introduced. Operations have been successful, production being increased in areas already established; other structures have been recognized and are in process of further testing; and an important new area proven and brought into production at Red Coulee, five miles west of Coutts.

A matter of much concern to the Department ever since the discovery of the Turner Valley naphtha-laden gas has been the waste of much of the gas after it was separated from the naphtha. This waste, so long as it was largely seasonal, did not appear to consist of a product that could be marketed, although the matter was kept under careful investigation. When, however, during the winter of 1928-29 the volume produced became such as to result in waste on a large scale, a joint committee of Dominion and Provincial Government officers was appointed to go into the matter and report.

FOREST SERVICE

The transfer to the western provinces of their natural resources will result in a very considerable change in the duties of this branch of the department by relieving it of a large part of its administrative responsibilities and permitting it to expand its investigative and advisory work. Substantial progress has already been made in silvicultural, economic, and industrial research through the work of the Silvicultural Research Division and the Forest Products Laboratories. Important fields for further investigation are the fundamental problems of forest fire protection, the rates of growth and other silvicultural characteristics of Canadian tree species, the better utilization of the raw materials furnished by Canadian forests, and the Dominion-wide forest inventory.

Owing to almost unprecedented meteorological conditions during the winter of 1928-29 and the spring and summer following, the forest fire situation from western Ontario through to the Pacific coast was one of the severest ever experienced since forest fire protection was organized. Efficient fire protection, however reduced losses to a figure that, while considerably greater than the average of the preceding five years, was much less than might have been expected from the unusual conditions.

During the year a co-operative arrangement was effected by the Dominion Government and the provinces, looking to a national inventory of forest resources. The Forest Service, besides working in the Prairie Provinces, has undertaken the work of compilation of the returns for the whole Dominion. It is hoped to have the work completed in about five years.

The revenue for the year shows a decrease, mainly attributable to a falling off in the revenue from timber sales in Saskatchewan. In other methods of timber disposal, much activity was shown and minor sources of revenue generally show increases.

The use of the forest reserves for purposes of recreation continues to increase, and additional facilities were provided for this purpose.

Forest surveys were continued in Manitoba and Saskatchewan, particular attention being given to the work of a forest inventory of the former province.

At the extracting plant at New Westminster, B.C., five and one quarter tons of seed were extracted from 8,800 bushels—about thirteen carloads—of cones; of this amount two and one quarter tons were sent to Great Britain for the use of the Forestry Commission, and further large quantities to the Irish Free State, New Zealand and Australia.

The number of active timber sales shows a considerable increase, though the revenue from this source decreased somewhat owing to restricted operations under existing market conditions.

The unfavourable weather conditions made this season an unpropitious one for work at the Indian Head and Sutherland nursery stations, and for newly set out tree plantations on the farmsteads throughout the Prairie Provinces. Established plantations came through the season well. The interest of farmers in ornamental trees, shrubs, flowers, lawns, and fruit trees is growing; shelterbelts for the protection of field crops are slowly increasing in number and their benefits are being experienced. The total number of broad-leaved trees distributed (to 6,486 applicants) was 8,673,650, and of conifers (pine and spruce) 138,700 were sent to 966 applicants.

Research work at the Indian Head nursery station received much attention. Many experimental plantations were surveyed and plotted; the effects of mixing different species were studied, as was also the effect of field-shelters on grain crops. In the sphere of forest pathology an intensive study was begun of poplar canker, and "damping-off" is also being investigated. Tests of apples, plums, and bush-fruits grown under the protection of shelterbelts are being carried on both at Indian Head and at Sutherland.

Exceptional activity has characterized the work of the Forest Products Laboratories at Ottawa, Montreal, and Vancouver. Several important investigations were carried on jointly at the Ottawa and Vancouver laboratories; in one of these investigations the department was pleased to have the co-operation of the British Forest Products Laboratory at Princes Risborough, England. The Pulp and Paper Laboratory at Montreal continued and enlarged its work in close co-operation with the pulp and paper industry.

The Silvicultural Research Division of the service continued its sample-plot work at the Forest Research Stations and took an important part in the Dominion-wide forest survey. Considerable progress was made in the work of investigating fire-weather conditions, carried on at the Petawawa Forest Experiment Station.

The chief publication of the year was a collection of *Form-class Volume Tables*, embodying the result of several years of work in forest mensuration.

Publicity activities included a newspaper advertising campaign in the interest of forest fire prevention, lecture work in boys' and girls' summer camps, and exhibits at fairs and exhibitions in Western Canada.

NATIONAL PARKS

During the year two new areas were added to the National Parks system. The first of these is the Riding Mountain national park in Manitoba. It consists of over 1,100 square miles of rolling woodland and lake country, rising into a rugged tableland and rocky forest-clad ridges. Beautiful lakes with fine bathing beaches, and a natural abundance of wild life add to its attractions, while its accessibility to through motor highways makes it very desirable from the tourist point of view. There seems no doubt that this reserve will serve the recreational requirements of a large section of the West, and conserve for future generations a typical example of some of the most interesting scenery of this part of Canada.

The second reservation was the Georgian Bay Islands park among the Thirty Thousand Islands of the Georgian Bay region of Ontario. This consists of a number of small areas, all islands, as in the case of those set aside many years ago among the Thousand Islands of the St. Lawrence river. Of recent years the islands have been so rapidly taken up that it was felt desirable some permanent provision should be made for public access to and enjoyment of this beautiful region. The largest reservation, Beausoleil island, is eminently suited to become a resort. In addition to fine bathing beaches and beautiful groves, it possesses legendary and historic interest.

From the tourist traffic point of view the parks had a most successful year with a total increase in travel of over 70,000. The growth of motor travel continues to be the outstanding factor in tourist business and there was an increase in the number of motorists visiting the parks.

The most important highway development during the year was the beginning of construction on the Big Bend road. This section will overcome the barrier of the Selkirks and supply the last link in the western half of the All Canada Highway. The route selected, instead of crossing the Selkirks, follows the valley of the Columbia river in its great arc about these mountains, and so avoids the engineering and climatic difficulties that would have been involved by a route crossing them direct. To facilitate the building of the highway the federal Government agreed to construct the eastern leg of the road, from Donald, to Boat Encampment, a distance of approximately ninety-five miles, while the provincial Government is building the western half.

Clearing and bridge construction, which was begun by the Highway Division of the National Parks Branch early in the autumn, was continued as long as weather conditions permitted, and begun again as soon as the snow disappeared. The provincial Government is also prosecuting its section with vigour and it is expected that the whole road will be ready by 1932. The completion of the highway will mean much to the future development of Western Canada. A through way will then be open to motor travel from the prairies to the coast with a consequent benefit to both. The outstanding magnificence of its scenery and the fact that it will give direct access to five national parks should make this one of the great scenic routes of the country and attract an increasing volume of foreign travel.

WATER POWER AND RECLAMATION

International Waterway Matters.—The responsibility of the Minister of the Interior to advise the Government with respect to international waterway problems is steadily increasing and the Dominion Water Power and Reclamation Service is called upon to devote more and more time to these points. Amongst new matters arising was the application of the West Kootenay Power and Light Company to the International Joint Commission for permission to construct and operate works on the Kootenay river for the purpose of storing water in and regulating the outflow from Kootenay lake.

Water-Power.—The outstanding feature of the past year was an even greater activity in water-power development in the Prairie Provinces than was noted in the last report. Interim licences were in effect covering the Ghost site on the Bow river in Alberta, the Island Falls site on the Churchill river in Saskatchewan, the Seven Sisters and the Slave Falls sites, both on the Winnipeg river in Manitoba. These sites, with an ultimate designed capacity of 345,000 horse-power, were scenes of intense construction activity during the year. The Ghost development was completed and power produced during the past winter, the Island Falls development was so far advanced by the end of the fiscal year, it was expected that power would be available within two or three months, whilst at Seven Sisters and Slave Falls construction was proceed-

ing according to schedule. In Canada generally hydro-electric development showed no signs of slackening, for although the new turbine installation completed during 1929 of 378,000 horse-power was slightly lower than for 1928, a great deal of new work was started. In fact, construction actually in progress should add an installation of 1,600,000 horse-power within the next three years, with a further 1,500,000 horse-power when these installations are brought to their ultimate designed capacities. This new construction and the further developments not yet commenced but in early prospect, ensure a steady increase in the utilization of Canadian water-power for some years to come.

Irrigation.—A dry, hot summer following a spring of subnormal run-off, characterized the season of 1929 in southern Alberta and southwestern Saskatchewan. Such conditions caused a considerable demand for water for irrigation purposes, a demand which was fully met on the larger projects where canal and reservoir systems are designed to render the districts independent of seasonal climatic conditions. Harvest conditions were ideal and little loss was occasioned by frost. Some 912,000 acre-feet of water were diverted from the St. Mary, Oldman, Bow, and Belly rivers into the canal systems of eight major irrigation projects, where crops valued at more than eight million dollars were grown on 490,000 acres under cultivation. Of this area 260,000 acres were irrigated during the season.

Drainage.—During the past year the weather was exceptionally favourable for construction work in connection with drainage development as precipitation was somewhat below average. The Dominion Water Power and Reclamation Service made field investigations and inspections of seventy-four private drainage schemes under the provisions of the Dominion Drainage Regulations, and twenty-four new applications for small schemes were dealt with. Since 1919 one hundred and eighteen such schemes have been carried out and a very considerable area has been reclaimed and utilized for agricultural purposes. Several field investigations were made of proposed provincial drainage districts in Alberta and Saskatchewan. The Roseau River flood prevention and reclamation project was fully investigated by intensive surveys, and complete topographic maps prepared. The western scheme of the Manitoba Dairy Farms Limited was inspected. Satisfactory progress was made in constructing drainage works for the Low Water Lake project. The fur-farming leases issued totalled ninety-four and comprised 33,346 acres.

NORTH WEST TERRITORIES AND YUKON

The past fiscal year was marked by the exceptional interest manifested in northern Canada. The development of aviation as a means of transportation has made possible the reaching of regions hitherto deemed practically inaccessible. The activity in Arctic exploration, the proposals to establish international air routes between Europe and America by way of Greenland and other Arctic islands, and the quest for northern furs and minerals have been responsible for the desire for a more intimate knowledge of our northern possessions. In carrying out the department's policy of broader development activities the work of this branch has been considerably increased in scope, both in regard to administration, and the dissemination of knowledge to the general public.

The Northwest Territories Council held seven meetings during the year at which many important subjects were dealt with, including the redrafting of game regulations, grants for the protection of native orphan children, and to assist the operation of schools, hospitals, and the establishment and maintenance of medical services, together with other matters affecting Canada's Northland.

The annual expedition to the Arctic Archipelago on the ss. *Beothic* was carried out successfully despite the fact that climatic conditions were dis-

tinently unfavourable. All the northern posts were reprovisioned and the required changes in the personnel were satisfactorily effected. At all of the places visited during the patrol conditions among the natives were found to be good, and the general health of the respective communities excellent.

During the year the Director conducted a special investigation of the posts and settlements in the Mackenzie District and Yukon Territory with a view to securing first-hand information of the rapidly changing conditions in order to advise on needed adjustments in administrative procedure.

Explorations were carried out in regard to the fauna of southwestern Baffin island, and an investigation was conducted in connection with the musk-oxen in the Thelon Game Sanctuary. With respect to reindeer a thorough investigation proved that large areas in Mackenzie District were suitable for the grazing of these animals. As a result of this and other information it was decided to purchase 3,000 head of reindeer in Alaska. The movement of these animals was begun late in 1929, and they are now being driven across country to the Mackenzie delta. Necessary arrangements are being made for the reception of the herd.

The engineering staff of the branch compiled the field notes of the various explorers and investigators. A number of surveys were made in different parts of the Territories including one of the Arctic Red River settlement.

Field medical services have been brought to a high state of efficiency, and several new medical stations were established at strategic points. In addition the Department co-operates with other Dominion Government services in maintaining medical officers at the chief settlements along the Mackenzie river.

To meet the ever increasing demand for information respecting Yukon and Northwest Territories the branch issued a number of timely publications containing authentic data with regard to inhabitants, resources, climate, transportation, and related matters.

Wild life is steadily increasing, and the larger bounty on wolves and coyotes has been instrumental in reducing to a considerable extent these predatory animals, with a resultant benefit to other forms of wild life.

The revenue derived from the administration of the *Northwest Game Act* was \$66,760.35 as compared with \$51,141.04 collected during the fiscal year 1928-29, representing an increase of \$15,619.31.

Yukon.—As a result of the deliberations of the Yukon Council several important amendments were made to existing ordinances, and new ordinances were passed regulating the hours of labour in placer mining operations, while the usual administrative details were dealt with.

Public welfare was maintained at the usual high level, the schools and hospitals being conducted in a most efficient manner, and the general health of the residents was good throughout.

The season was very good from an agricultural standpoint, an abundance of moisture resulting in large yields of high grade produce.

The Territory sustained its reputation as a Mecca for both hunters and tourists. Big game was reported as very plentiful, and many fine specimens were taken.

OBSERVATORIES

Dominion Observatory, Ottawa

Observations with the meridian circle were obtained on 196 days. In the regular program there were obtained 2,646 measurements of right ascension and declination of program, clock, and azimuth stars; 52 of planets; and 135 of the moon; also 1,039 sets of measurements of nadir and other instrumental constants. In addition to the regular program, observations were made during January with

a three-inch Cooke transit for the purpose of investigating possible errors of a systematic nature. The time service, comprising 4 primary clocks, 15 secondary clocks, 600 minute-dials, 18 second-dials, 2 tower clocks, and various relays, chronographs, and seismograph shutters, was maintained as usual; in addition 253 clocks, watches, and other time mechanisms were overhauled for other branches and departments of the government service. Wireless time signals were received regularly from England, the United States, Germany, and France. Three sets of time signals were sent out daily, one through the local broadcasting station, CNRO, and two directly from the observatory on short wavelengths. The synchronome clock was received in January and installed in the clock vault, where its rate has proved to be almost constant and free from the sudden small changes usual to sensitive master clocks.

With the eighty-foot coelostat reflecting telescope and the twenty-three-foot spectrograph, 235 observations (each containing 9 strips of spectrum) of solar limbs, midway and centre, together with iodine comparison lines, were obtained. Direct photographs were made of the nine-inch solar image on 110 occasions, recording sunspots and position lines; prints of these were supplied to the Radio Branch, Department of Marine, in connection with the study of sunspot effects on radio reception. About 430 spectrograms were measured and as many computations made of solar radial velocity and heliographic positions. Charts and information relating to long-period variations in terrestrial and astronomical phenomena were prepared in connection with an investigation of fluctuations in wild life.

The fifteen-inch equatorial was employed in the continued study of Cepheid variables and several selected spectroscopic binaries. With the spectrograph attachment 144 spectrograms were obtained, mostly of ϵ Aurigae, 1 Geminorum, η Aquilae, β Lyrae, ζ Ursae Majoris and η Virginis. η Virginis proved to be an interesting triple system with evidence of marked perturbations. The spectrograms were measured and reduced, and in collaboration with McGill University a thorough investigation of the variables α Ursae Minoris and R T Aurigae was carried out with a Moll microphotometer. The photo-electric photometer attachment was overhauled and a number of mechanical changes effected in order to increase its sensitivity. As usual the equatorial telescope was made available on Saturday nights for observations by the public.

In photographic photometry, observations on the revised list of Cepheid fields were continued for the purpose of obtaining charts of fields of the variables. Copies of charts for thirty-two fields were completed for distribution to the various co-operating observatories. Observations were also made for the determination of the light curves, and 185 plates obtained. Measurements of the magnitudes of some of the variables on the original program were continued. Tables were computed for the prediction of occultations by a semi-graphical method.

The seismographs at Ottawa, Saskatoon, Halifax, Shawinigan Falls, and Seven Falls were in practically continuous operation, and during the year 434 earthquakes were recorded, of which thirty-one were reported to the press and, by telegraph, to Science Service, Washington. Tremors of marked intensity originated in the Aleutians, in New Zealand, New York State, Alaska and at the Grand Banks off Newfoundland. The last mentioned caused serious damage and is being made the subject of a special investigation through the collection of original seismic records from the many stations scattered over the globe, and local information by questionnaire and correspondence. The seismologist was attached to a prospecting party in Turner valley, Alberta, in January for the purpose of noting the routine and results of underground investigation by modern seismic methods. Arrangements were made with the Royal Canadian Mounted Police and the Department of Marine and Fisheries for reporting earthquakes occurring in the Arctic, in connection with a continent-wide scheme of investigation.

In terrestrial magnetism determinations of the three magnetic elements, declination, inclination, and horizontal intensity, were made at six stations which were established by the Carnegie Institution in 1913 (three of which were exact reoccupations and three approximate) and at four new stations, along the water route between Sioux Lookout and Fort Albany on James bay by way of lac Seul and the Root and Albany rivers, in the area between longitudes 80° W. and 95° W. and latitudes 50° N. and 53° N. Similar determinations were also made in the vicinity of two known fault lines near Ottawa, in conjunction with torsion balance surveys for the investigation of the applicability of geophysical methods in prospecting.

In connection with the gravity observations reported last year for Greenwich, Potsdam, Washington, and Ottawa, to redetermine the adopted international standard values, a series of observations was made to determine the temperature co-efficients of the three pendulums used, and the final results were computed, completing a fairly rigorous connection between gravity values in Europe and North America. The value obtained for Greenwich agrees well with earlier determinations, while the new values for Ottawa, and Washington are slightly higher than those previously accepted. Considerable progress was made with the computations of unpublished observations of some fifteen field gravity stations in 1927. Following the recent investigations of modern European methods of geophysical prospecting, undertaken in collaboration with the Department of Mines, a torsion balance purchased by the Geological Survey was tested at the observatory and used for making traverse surveys of certain geological structures in the vicinity of Ottawa, instituting an investigation of the applicability of the torsion balance to mining in Canada.

The American Astronomical Society held its forty-second meeting at the observatory from August 26 to 29. Professor E. W. Brown of Yale University, President of the Society, presided over the proceedings. Forty-eight technical papers were read and discussed, thirteen of which were contributed by members of this observatory, five by the staff of the Victoria observatory and four from other Canadian sources. At an informal reception the visiting astronomers, some seventy-five in number, were given facilities for inspecting the work of the observatory.

Seven of the regular series of Dominion Observatory publications were issued and distributed, Vol. VII, No. 4, *Location of Epicentres, 1923-4-5*; Vol. VIII, No. 9, *Gravity in Western Canada*; Vol. IX, No. 6, *The Castor System*; Vol. IX, No. 7, *A Study of Eta Aquilae, Second Paper*; and Vol. X, Nos. 1, 2 and 3, *Bibliography of Seismology*.

The Bibliography of Seismology, issued quarterly as a publication of the observatory, takes the place of the *Bibliographical Bulletin*, formerly issued under the auspices of the eastern section of the Seismological Society of America, but compiled and edited at the observatory.

Dominion Astrophysical Observatory, Victoria, B.C.

This is the twelfth annual report of the work of this institution, which commenced actual operations on May 6, 1918. The details of the work are published in complete form in the publications of the observatory. Three volumes of these publications and fourteen numbers of Volume IV have been issued, while three more numbers are in press.

As in previous years, the whole time of the telescope, except two hours for visitors every Saturday evening, was devoted to photographing stellar spectra. The observing weather was considerably above the average even exceeding that of last year. The eleven-year average shows that on 207 nights with a total exposure time of 1,259.4 hours there were secured 1,558 plates. While the

number of plates secured in the past year, 1,133, is considerably fewer than the average, this is a necessary consequence of the investigations being carried to increasingly fainter stars which require longer exposure. A better index is the total observing time; on 223 nights during the past year the total was 1,497.1 hours, which is about 19 per cent above the average.

The investigation of all B type stars brighter than 7.50 and north of declination -11° which has been in progress since 1924 was completed during the year. This program involved the observation and measurement of 3,500 spectra of 550 stars. Following the completion of the manuscript for publication a general catalogue was compiled. This catalogue contains 1,560 entries for 996 stars; 458 of the stellar velocities (46 per cent) were determined solely at this institution, these being for stars fainter than 5.50.

Preliminary solutions for the K term and galactic rotation for the O and B type stars were made. It was found that the K term vanishes for stars fainter than the 6th magnitude. It seems likely that this hitherto unexplained term in radial velocity is caused by group motion of recession of the bright stars in the southern hemisphere—brighter than 5.50. The nearest group of stars B3-B5 brighter than 5.50 does not show a galactic rotation but the other more distant groups show a decided rotation about a distant centre in galactic longitude 326° in the direction of the constellation of Sagittarius. This research confirms the hypothesis of Lindblad and Oort.

The motions and distribution of the interstellar gases were determined from observations of the interstellar lines H and K in the spectra of 261 O to B2 stars. The determination of the sun's velocity and apex relative to the interstellar matter gave values in good agreement with the elements determined by Campbell for 2,149 naked-eye stars. The calcium cloud has no K term. The solutions for galactic rotation show conclusively that this diffuse interstellar matter is in rotation about the same distant centre in galactic longitude $332^{\circ} \pm 6^{\circ}$. Further by solving concurrently for the distances of the interstellar matter and the stars in whose spectra the lines are observed, it was shown that the interstellar matter is uniformly distributed throughout space. The rotational co-efficient for the stars has exactly twice the value of that for the clouds, thus confirming Eddington's hypothesis of uniform distribution.

Further solutions of the motions of the O and B type stars are now being made to deduce final values for the solar motion K term and galactic rotation.

About 450 spectra were secured during the year on the A-type program, among which number there were spectra of roughly 100 stars of which previously we had no spectrum. The remainder were additional plates for other stars. Slightly over 500 were measured during the year for radial velocity, a few having to do with spectroscopic binaries. We have now the spectra of about 1,100 A-type stars to be used later for spectroscopic parallax work.

The orbits of two A-type stars, Boss 613 and H.R. 3352, were completed during the year but not published. A revision of the elements of the binary 19 Draconis was made as recent observations suggested a slight correction to the period formerly adopted. A number of spectrograms of the B-type binary star H.D. 185936 were remeasured and a satisfactory period in the neighbourhood of 2.5 days deduced.

Observations of the eclipsing variable Y Cygni were continued. Calculations of the orbital elements for the years 1919-21 and for 1928-29 show clearly the rotation of periastron detected by other methods. Further the quantitative

agreement with the latest photometric results by Professor R. S. Dugan of Princeton is good, in view of the accuracy of the observation. A marked change was found in the velocity of the system, indicating the presence of a third body with a spectrum too faint to be observed.

Measurements were made of the radial velocities of 209 faint K stars near the galactic equator and 15 near the galactic pole. An analysis of the velocities giving the solar motion and galactic rotation effect for these stars agrees with the results derived by other astronomers from proper motion data. It is found that the peculiar velocities of these K stars are high (four have been observed greater than 100 km./sec.) and they show definite signs of stream motion. Observations are being continued in order to place these conclusions on a firmer basis.

A spectroscopic study of two semi-regular variables SV Ursae Majoris and V Ursae Minoris was commenced.

The program of observation of Wolf-Rayet stars, begun in the fall of 1927, was completed. Analysis of the complete data made it possible to formulate a theory concerning the physical nature of these peculiar objects. This theory attributes the broad band emission spectra of Wolf-Rayet stars to the continuous ejection of gaseous material from the stellar surface by selective radiation pressure. A new system of classification has been devised for the Wolf-Rayet stars which defines their position relative to other stars in the Harvard sequence.

An investigation of the physical nature of the variable star Z Ursae Majoris was begun and some 22 spectrograms of the star were obtained during the year.

A 10-foot grating spectrograph of Littrow form was completed and installed in the laboratory. This instrument has been used for the photometric determination of line intensities in laboratory spectra.

Many noted astronomers from all over the world visit the observatory from time to time. Including day visitors, approximately 39,000 persons visited the institution during the year.

SURVEYS BUREAU

All branches of survey work were actively prosecuted in the fiscal year 1929-30. The season was notable for the advance in the use of the aeroplane in all surveying fields, not only for the making of aerial photographs but for reconnaissance purposes and the transportation of ground survey parties.

Progress was made by the Geodetic Survey in the work of triangulation and levelling. In nearly all of the provinces work in the extension of triangulation nets and precise traverses was carried forward, and Laplace stations combining observations for latitude, longitude, and azimuth were established. The Levelling Division had field parties operating in the provinces of Quebec, Ontario, Manitoba, Saskatchewan, and British Columbia. The work of establishing precise level bench-marks throughout Canada was pushed forward energetically and nine publications were issued containing the record of the results throughout Canada. Geodetic research work was continued, and valuable data in the investigation of isostasy were secured.

The Topographical Survey continued its mapping program, including control surveys, aerial, ground, land-classification, and interprovincial boundary surveys, and surveys for determining magnetic declination. Eighteen parties

were in the field and new map sheets were issued covering over 100,000 square miles, of which over 70,000 square miles were covered by map sheets of the National Topographic Series. The facilities of the Physical Testing Laboratories are increasingly made use of both by Government departments and the public, in connection with the repairing and testing of scientific measuring and recording instruments.

The International Boundary Commission, Canadian Section, in conjunction with the United States Section was engaged in its work of maintaining the 5,500 miles of boundary between Canada and the United States in a state of effective demarcation. The vista in the Quebec-Maine section of the boundary was reopened, monuments were repaired, and the exact boundary marked on a number of international highways, bridges and tunnels. During the year fourteen boundary maps were printed and signed by the commissioners.

The Town Planning Division is the central educational agency for the promotion of town-planning practice throughout the Dominion, and contact is maintained with those centres where town-planning is in progress, or is being initiated, and the most up-to-date information is furnished relating to this work.

NATIONAL DEVELOPMENT BUREAU*

This bureau had a most active year along all its lines of endeavour.

Industrial Surveys.—As was the case last year, active co-operation was extended to boards of trade and other commercial and municipal organizations interested in industrial expansion. This work has now become a very important phase of the development studies carried on by the bureau. It comprises general and special investigations into the utilization of raw materials and products, and the initiation and direction of field surveys designed to indicate all latent possibilities for industrial expansion within specified areas. As regards the industrial surveys the policy formulated and adopted by the bureau provides for directing the formation, within the co-operating agencies concerned, of committees representative of the various commercial and social elements of the districts, for advising these in the matter of personnel, procedure, and other factors of importance which enter into the execution of the survey, and for such departmental assistance in the final analysis and correlation of the material as may be required.

During the year departmental co-operation was solicited by the boards of trade of Regina, Moose Jaw, Saskatoon, Prince Albert, Edmonton, Vancouver, New Westminster, Victoria, Calgary, Lethbridge, and Medicine Hat. In order that these as well as other interested bodies in Western Canada might be assured of the full benefit of departmental facilities in this work, a visit was made to the various districts by an officer of the bureau. This afforded the personal contacts essential to co-operation and enabled the leaders and members of the organizations concerned to receive first-hand information as to the scope and aims of industrial surveys. At each place complete explanations were given of the local organization involved, the nature and extent of the basic information required, the procedure that has been found to be most effective in collecting the material, and of the phases of the work in which departmental facilities could most effectively be utilized. As a result, industrial surveys were at once initiated in the Saskatoon, New Westminster, and Victoria areas in connection with which the Bureau undertook the work of

* Formerly designated Natural Resources Intelligence Service.

compilation, correlation, and analysis of the data collected in the field by the special committees, later combining these with related material available in Government departments at Ottawa. The preparation of a complete report was then placed in hand.

During the previous year a comprehensive industrial survey was made of the Border Cities district, comprising Windsor, Walkerville, Ford City, Riverside, Tecumseh, Sandwich, Ojibway, and La Salle. This was directed by the Bureau in co-operation with the Border Cities Chamber of Commerce and was followed by a report embodying a complete analysis of the established manufacturing industries in that area as well as an exposition of the possibilities of developing new industries. The Border Cities Chamber of Commerce has continued to use the facilities of the bureau in carrying out recommendations contained in that report. Visits were made also to London, Kitchener, Hamilton, and Niagara Falls, where the bureau has for some time been working in co-operation with the chambers of commerce or similar organizations in those cities.

By special request an officer of the bureau represented the department at Fort William Industrial Fair held in February. Advantage was taken of this visit by business men of the district to receive detailed explanations of departmental policy with respect to industrial surveys. As a result, tentative plans for the necessary surveys were at once formulated by the Board of Trade of that city as well as by the Chamber of Commerce of Port Arthur.

General Information Work.—The comprehensive index system maintained by the bureau provides a ready reference of up-to-date information on all phases of the development of Canada's natural resources. Record is kept of the continuous stream of development news reflecting the very latest operations throughout the country. The data, so assembled, are analysed and co-ordinated.

The many inquiries received during the year cover a wide range of resources and industrial subjects, and originate not only in this country but in a great number of cases are received from abroad from business men, investors, prospective settlers, editors, teachers, and others interested in the opportunities for development which Canada has to offer. In most instances comprehensive replies can be formulated at once from information on file, but many inquiries are of a nature which require special investigation and more protracted study. For instance, special investigations were made into definite phases of such subjects as the hydrogenation of fish oils, the manufacture of porcelain electric insulators, the utilization of waste parts of lobsters resulting from canning operations, opportunities for the manufacture of automatic forced draught machines for use in household furnaces, the possibilities of manufacturing blanc fixe in Canada, etc. In addition, upon request of boards of trade, chambers of commerce and other public service organizations in various sections of Canada, extensive reports were prepared covering the more or less local situations with respect to certain industries such as macaroni, leather, furniture, overalls, evaporated fruit, liquid chlorine, malt, brick, glue, hemp, soap, rubber tires, inside tile, coal pulverization, fish reduction, muskrat, silk, feeder cattle, and flour milling. Quite apart from the special co-operation which was extended to outside agencies, considerable progress was made in the routine study of development problems initiated by the Bureau, in connection with which a number of reports and maps were issued. *The Resources of New Brunswick*, one of a series of standard provincial reports, was revised, augmented by much new material, and printed. Also, in view of the remarkable expansion of industry along the St. Lawrence waterway and of the unprecedented interest in the

future of that area, the policy was adopted during the year of preparing separate reports of each contiguous district. Already much headway has been made in studies of the counties of southern Ontario and it is worthy of note that mimeographed reports of Dundas county and Hastings county recently issued have each been much in demand. Other mimeographed reports issued include *Opportunities for Settlers in Special Areas*, and *Peat and Its Industrial Applications*, the latter prepared in co-operation with the Department of Mines. The regular series of industrial maps was extended during the year to include tanneries, furniture factories, and wooden box, basket, and crate factories. The pulp and paper map was revised.

Because of the relatively large proportion of farm lands available in Canada, inquiries are very numerous concerning the possibilities for settlement in the various provinces. Land maps, cereal, elevator, physical and climatic, and vegetation and forest cover maps, and special reports, have been issued to facilitate handling the correspondence involved. The information conveyed by these media is necessary in dealing with ordinary requests, but considerable time and research is also devoted to the many inquiries which call for further study.

The domestication of fur-bearing animals has noticeably quickened interest in Canada's fur resources. This is reflected in the number of applications received for publications bearing on the subject of trapping practice as well as for information concerning the physical and economic aspects of fur-farming. The National Development Bureau has collected, classified and recorded a great mass of essential information on this important industry and has issued a number of reports which have proved to be very popular. During the year *The Muskrat: A Canadian Fur Resource* was printed, both in English and French. In addition there are now available in mimeographed form, monographs dealing with the domestication of practically all important fur-bearers.

Tourist Information.—Each year Canada becomes more widely known abroad, particularly among our neighbours to the south who in ever increasing numbers spend their vacations in this country. The actual economic influence exerted by this traffic is difficult to estimate, but is obviously of such importance as to warrant recognition as a major factor in Canadian development. The National Development Bureau put forth efforts to promote the traffic and to furnish information concerning our recreational resources. During the year inquiries included applications for particulars of automobile routes, condition of roads, camping trips, canoe trips, hiking tours, fishing and hunting trips, summer resorts, game laws, leasing of lakes, etc., and included also requests from tourists who had previously taken advantage of this service. Every endeavour is made to give the prospective tourist complete and authentic information. Tourist maps and booklets are revised periodically and supplemented as conditions warrant. During the year four booklets descriptive of the more interesting canoe trips in the Maritime Provinces, Quebec, Ontario, and in the western provinces were printed and several detailed descriptions of canoe trips were added to the lengthy list already available. Memoranda were prepared and issued in mimeographed form covering the better known hunting and fishing districts. The demand for the handbook, *Vacations in Canada*, was so great that a reprint was necessary.

Distribution of Publications.—During the year 829,379 maps, reports and booklets were distributed not only in Canada but also throughout Great Britain, the United States, and other countries. By this means co-operation was maintained with practically all organizations of importance in the different countries in touch with prospective tourists. These agencies assisted materially in circulating information about Canada either by direct distribution or by the advantageous display of reference maps, booklets, and folders.

Approximately 15,000 prospective delegates to international conventions held in Canada, of which there were seventy-five during the year, were supplied with road maps and booklets for the purpose of assisting them in planning their trips. Articles and reviews regarding Canada's attractions prepared by the Bureau were much in demand and appeared in newspapers and magazines in the United States, having a combined circulation of upwards of nine million copies. Publications distributed were utilized both by organizations and individuals, including a firm of ship brokers in Norway, interested in navigation problems of the Hudson Bay route; the geographer for the Institute of Politics which held a conference in Williamstown, Massachusetts, for the purpose of studying Canada-United States relations; a steamship company in Boston desiring material descriptive of Canadian tourist resorts for its offices in the tropics; an aircraft company planning a flight from Montreal to Vancouver; an organization in Ohio holding a "Canada" essay contest; a Chicago company interested in establishing a trans-Atlantic air service between that city and London via Hudson bay, Greenland, and Iceland; and the organizers of the American Ford Aircraft Reliability Tour.

Special Canadian News Service.—The *Canadian Newsletter* was issued weekly in English and French for distribution abroad. It comprises an average of over ten mimeographed pages of selected and condensed news describing the latest developments of resources and industries throughout Canada. It is distributed to Canadian ministers abroad, trade commissioners, newspapers and periodicals, technical journals, libraries, chambers of commerce, banks, investment houses, and industrial and commercial interests. The reissue by the High Commissioner's office in London of the items appearing in the newsletter greatly increases their circulation in the British Isles. The Canadian legations in Paris, Washington and Tokyo are important avenues for distribution. In connection with this news service every effort was made to accede to specific requests for more detailed articles and for suitable illustrations in the form of halftones, linecuts and photographs.

Geographic and Economic Mapping.—In the Chief Geographer's office considerable progress was made in the preparation and issue of the official maps of Canada. Seventeen sheets of Standard Geographic map series were revised and new editions of the following sheets were published: Belleville, Cape Breton, Cornwall, Gowganda, Halifax, Ottawa, Parry Sound, Quebec, Rivière du Loup, Yarmouth, and Sherbrooke, on a scale of 1 to 250,000; and Bonaventure, Gaspé, Gatineau, Roberval, Sudbury, and Victoria on a scale of 1 to 500,000. Much work was also done on the preparation of other sheets of this series. New revised editions of the Land District maps were issued, one for each of the nine land districts of the Prairie Provinces. The following maps were also revised and re-published: the small Railway map of Canada, 100 miles to the inch; Yukon Territory, 16 miles to the inch; Manitoba, Saskatchewan, and Alberta, each on a scale of 12½ miles to the inch; and sheet North L-18 of the *Carte du Monde au Millionième* was published. A number of large diagrammatic maps were specially prepared for lecture purposes. A base map of the province of Quebec was completed showing the Dominion electoral districts and giving also in detail all municipalities including towns, villages, parishes, and townships.

The importance of economic geography in relation to studies of national progress is recognized not only in educational spheres, but also in the fields of practical development. Again this year the Bureau carried out an extensive program of economic geography investigations as a result of which many of the regular series of economic maps were revised and a number of new maps initiated and issued or else placed in advanced stages of preparation. Included

are the Trade Routes map of the World; the Resources map of Canada, 230 miles to an inch; the Resources map of Canada, 100 miles to an inch; the Vegetation and Forest Cover map of Canada; a series of provincial resources maps; the United States-Canada Road maps series; map of the Prairie Provinces showing disposition of lands; and the Road and Recreational Resources map of New Brunswick. In addition, the facilities of the bureau were frequently taxed to the utmost in meeting the demands from the various branches of the federal and provincial Government services, as well as from geographical establishments, universities, industrial and financial interests, economists, authors, and publishers, for special maps portraying some phase of resources development.

Technical Plant.—The technical plant comprises photographic laboratories, blue printing, photostat, mimeographing, and related facilities. Established primarily to meet the varied needs of all branches of the Department of the Interior, other federal departments have increasingly made use of these services, with the result that all divisions of the plant experienced increased operations during the year. Photographs for reproduction purposes are much in demand by authors, publishers, syndicate newspaper services, chambers of commerce, trade commissioners, and other organizations at home and abroad, with the result that more than 9,500 photographs were distributed. The photographic library of the Bureau comprehensively covers all fields of development in Canada and is constantly kept up to date by the accession of new material. The lantern slide lecture service considerably increased its activities and new distributing centres were established. These lectures have proved to be of great educational value in depicting Canada's resources and attractions, and despite the fact that all standard sets have been duplicated many times these are practically in constant circulation. During the year 538 sets were distributed, the audiences totalling approximately 237,000 persons.

DISPOSITION of the Surveyed Areas in Manitoba, Saskatchewan and Alberta, January 1, 1930.

Items	Manitoba	Saskatchewan	Alberta	Total
	acres	acres	acres	acres
Area under homestead (including military homesteads).....	8,418,040	30,356,200	21,003,220	59,777,460
Area under pre-emptions, purchased homesteads, sales, half-breed scrip, bounty grants, special grants, swamp lands transferred to province of Manitoba, etc.....	5,846,438	6,727,654	3,542,471	16,116,563
Area granted to railway companies.....	3,553,969	15,197,944	13,032,697	31,784,610
Area granted to Hudson's Bay Company.....	1,274,147	3,352,958	2,404,152	7,031,257
Area of School Land Endowment (one-eighteenth of area surveyed in sections).....	1,639,200	3,944,650	3,769,400	9,353,250
Area sold subject to reclamation by drainage.....	41,066	41,656	39,606	122,328
Area sold under irrigation system.....		42,812	273,969	316,781
Area under timber berths (leased).....	1,363,770	559,974	1,016,672	2,940,416
Area under grazing leases.....	74,486	3,492,827	3,246,478	6,813,791
Area of forest reserves and parks.....	2,477,400	6,535,000	17,745,700	26,758,100
Area reserved for forestry; parks; dairy farms (Manitoba) and pulpwood purposes (inside surveyed tract).....	1,950,000	1,104,000	1,192,000	4,246,000
Area of road allowances.....	977,638	1,468,830	1,291,376	3,737,844
Area of parish and river lots.....	529,367	84,701	121,263	735,331

Appended hereto are individual reports of the Commissioner of Dominion Lands; the Supervisory Mining Engineer; the Director of Forestry; the Commissioner, National Parks of Canada; the Director of Water Power and Reclamation; the Director of the North West Territories and Yukon Branch; and the Director General of Surveys. The Geodetic Survey, the Topographical Survey, the Water Power and Reclamation Service, the Forest Service, the National Parks of Canada Branch, and the North West Territories and Yukon Branch publish separate annual reports which review the work of the year in greater detail.

Your obedient servant,

W. W. CORY,
Deputy Minister.

November 1, 1930.

DOMINION LANDS

REPORT OF THE COMMISSIONER, J. W. MARTIN

An interesting feature of the transactions for the fiscal year, so far as Dominion lands were concerned, was the large number of homestead entries recorded, showing an advance over 1928-29 when there was also an exceptional increase. The entries granted totalled 17,504 as compared with 16,157 for the previous year, an increase of 1,347. Included in these entries were 4,952 second homesteads granted to settlers who had completed the duties in connection with their first homesteads by January 1, 1925, an increase of 261 as compared with the previous fiscal year. In addition to the homestead entries there were taken up 720 soldier grants, aggregating an approximate area of 115,200 acres.

Applications for patent were as follows:—

Number examined.....	5,845
New applications.....	3,188
Applications accepted and notifications issued.....	2,356
Certificates of recommendation sent out.....	39

Since the inauguration of the Seed Grain and Relief Adjustment Boards of the provinces of Manitoba, Saskatchewan, and Alberta, under the legislation authorizing the adjustment or apportionment of seed grain, fodder, and relief indebtedness, there have been submitted to the various boards for investigation and recommendation some four thousand cases. Of this number about 1,900 have been finally dealt with by Order in Council, and a large proportion of these were disposed of during the last fiscal year. The open accounts covering Dominion advances and joint advances with the provinces number approximately 22,000, many of which may ultimately have to be disposed of through adjustment.

The report of the Timber and Grazing Lands Division indicates an increase of over sixty million feet board measure of lumber manufactured, and five million feet board measure marketed. There was an increase of over eighty-six thousand head of livestock grazed on Dominion Government leaseholds which now cover an area of nearly seven and a quarter million acres.

A general auction sale of school lands was held in the province of Saskatchewan, which was successful both as to the area disposed of and the price per acre realized. In the provinces of Alberta and Manitoba small auction sales were held comprising chiefly lands which had previously been held under sale.

The areas disposed of, with values realized, were as follows:—

Province	Area in acres	Amount realized		Average price per acre	
		\$	cts.	\$	cts.
Saskatchewan.....	371,309 79	5,426,479	95		14 62
Alberta.....	28,373 27	342,504	35		12 07
Manitoba.....	4,198 15	49,738	29		11 85

The revenue derived from the disposal of mining rights on Dominion lands increased considerably during the past fiscal year. This increase was due to the interest manifested in leases issued for petroleum and natural gas purposes, principally in the province of Alberta. During the year the Department commenced the collection of royalty on oil produced from wells drilled on Dominion lands. The royalty provisions came into force on January 1, 1930, and during the months of January, February, and March over \$33,000 was collected on this account. The number of producing wells has increased, and the total oil production from Dominion lands in the fiscal year was nearly one million barrels. The records of the Mining Lands Division show that there was an increase in production of coal, petroleum, natural gas, and gold from Dominion lands in the Prairie Provinces, and of silver and lead in Yukon Territory.

Following up the report of the Royal Commission which conducted an inquiry into the financial adjustments involved in the proposed transfer to Manitoba of its natural resources, an agreement between the Dominion and the province of Manitoba was concluded on December 14, 1929, under which the interest of the Crown in all Crown lands, mines, minerals, and royalties, and all sums due or payable for such lands, mines, minerals or royalties, were declared to belong to the province and the administration thereof was declared to be transferred to the province from and after the coming into force of the said agreement. Similar agreements have also been entered into with the provinces of Saskatchewan, Alberta, and British Columbia.

It is expected that the governments of the western provinces will take over the administration of the natural resources within their respective boundaries during the coming fiscal year.

REPORT OF ASSISTANT COMMISSIONER OF DOMINION LANDS, EDMONTON

Land Patents

LETTERS PATENT

During the fiscal year ended March 31, 1930, there were 5,997 letters patent issued, covering a total area of 832,665 acres, divided according to provinces as follows:—

Province	Patents	Acres
Manitoba.....	604	81,898
Saskatchewan.....	2,621	376,784
Alberta.....	2,338	349,240
British Columbia.....	425	24,558
Yukon Territory.....	2	180
Northwest Territories.....	7	5
Totals.....	5,997	832,665

The various kinds of grants are summarized below and are later dealt with in detail in statements A to G, inclusive:—

Grants	Patents	Acres
Homesteads.....	2,164	330,611
Sales.....	957	99,808
Pre-emptions.....	432	68,718
Purchased homesteads.....	42	5,476
Railways.....	457	21,686
Special grants.....	1,409	199,638
Northwest half-breed grants.....	29	3,635
Licences of occupation.....	3	2
Soldier grants.....	328	50,287
Hudson's Bay Company grants.....	175	52,802
Manitoba Act grants.....	1	2
Totals.....	5,997	832,665

There was a decrease of eighteen letters patent and a decrease in the area patented of 112,539 acres, as compared with the previous year.

Since May, 1873, there have been issued 491,454 letters patent, aggregating an area of 107,126,520 acres. Those issued since July, 1883, are of record in the Land Patents and Records Division, and number about 476,357.

LANDS DISPOSED OF

Seventeen thousand five hundred and four (17,504) homestead entries (including 4,952 second homesteads) were granted, aggregating an approximate area of 2,800,640 acres, made up by provinces as follows: Manitoba, 727; Saskatchewan, 6,089; Alberta, 9,795; British Columbia, 893; total, 17,504.

There was an increase of 1,347 in the number of homestead entries granted as compared with the previous year.

By land agencies the 17,504 homestead entries are made up as follows:—

Manitoba.—Dauphin, 432; Winnipeg, 295; total, 727.

Saskatchewan.—Moose Jaw, 1,216; Prince Albert, 4,873; total, 6,089.

Alberta.—Calgary, 410; Edmonton, 4,603; Grande Prairie, 1,801; Lethbridge, 222; Peace River, 2,759; total, 9,795.

British Columbia.—Grande Prairie, 492; Kamloops, 37; New Westminster, 36; Peace River, 302; Revelstoke, 26; total, 893.

The 17,504 homestead entries represented 50,406 persons as compiled from information obtained from each entrant. Of these entries 3,750 were made by residents of the several provinces of the Dominion; 2,066 by persons who had previously obtained homestead entries which had been cancelled by default or at the request of the entrant, in order, in most cases, that he might enter for other lands; 1,049 were made by persons from the British Isles; 1,294 by persons from the United States; 450 by Austrians; 208 by Hungarians; 460 by Russians; 43 by Finlanders; 364 by Norwegians; 38 by Swiss; 34 by Frenchmen; 24 by Belgians; 240 by Swedes; 495 by Germans; 101 by Roumanians; 1,384 by Poles; 179 by Danes; 373 by citizens of various other countries and 4,952 were second homesteads.

There were 720 soldier grant entries made during the year, aggregating approximately 115,200 acres made up as follows:—

	Number of entries	Acres
Manitoba.....	19	3,040
Saskatchewan.....	224	35,840
Alberta.....	422	67,520
British Columbia (Railway Belt and Peace River Block).....	55	8,800
Totals.....	720	115,200

By land agencies the soldier grants were as follows:—

Manitoba.—Dauphin, 7; Winnipeg, 12; total, 19.

Saskatchewan.—Moose Jaw, 52; Prince Albert, 172; total, 224.

Alberta.—Calgary, 24; Edmonton, 164; Grande Prairie, 94; Lethbridge, 3; Peace River, 137; total, 422.

British Columbia.—(Railway Belt and Peace River Block) Grande Prairie, 30; Kamloops, 2; New Westminster, 7; Peace River, 12; Revelstoke, 4; total, 55.

There were 4,952 second homestead entries made during the year, aggregating approximately 792,320 acres, made up as follows:—

	Number of entries	Acres
Manitoba.....	182	29,120
Saskatchewan.....	2,061	329,760
Alberta.....	2,470	395,200
British Columbia (Railway Belt and Peace River Block).....	239	38,240
Totals.....	4,952	792,320

By land agencies the 4,952 second homestead entries are made up as follows:—

Manitoba.—Dauphin, 107; Winnipeg, 75; total, 182.

Saskatchewan.—Moose Jaw, 626; Prince Albert, 1,435; total, 2,061.

Alberta.—Lethbridge, 121; Calgary, 202; Edmonton, 1,090; Grande Prairie, 471; Peace River, 586; total, 2,470.

British Columbia.—Grande Prairie, 138; Peace River, 73; Revelstoke, 7; Kamloops, 15; New Westminster, 6; total, 239.

CANCELLED ENTRIES

There were cancelled 8,042 entries as follows:—

	Manitoba	Saskatchewan	Alberta	British Columbia
Homesteads.....	552	2,261	3,823	202
Soldier grant entries.....	153	199	365	29
Pre-emptions.....		177	177	
Purchased homesteads.....		19	10	
Sales.....	7	24	39	5
Totals.....	712	2,680	4,414	236

Value of improvements collected on cancelled homesteads: 762 refunds, \$41,447.81.

NEWLY SURVEYED LANDS THROWN OPEN TO HOMESTEAD ENTRY

Newly surveyed lands comprised in 37 townships were made available for homestead entry as follows:—

Manitoba.—Dauphin, in 4 townships.

Saskatchewan.—Moose Jaw, in 1 township; Prince Albert, in 2 townships; total, 3 townships.

Alberta.—Peace River, in 6 townships; Edmonton, in 1 township; Grande Prairie, in 21 townships; total, 28 townships.

British Columbia.—Grande Prairie, in 2 townships.

¹Includes the sale price of 103 town lots—\$5,330.

DEPARTMENT OF THE INTERIOR

After making the necessary deductions for cancelled sales and adjustments in regard to alterations in areas, the approximate net areas and values of school lands and town lots disposed of to March 31, 1930, were as follows:—

Province	Area in acres	Sale price	Average per acre	Sale price of town lots
		\$ cts.	\$ cts.	\$ cts.
Manitoba.....	635,480.74	6,101,913 80	9 60	5,240 00
Saskatchewan.....	2,119,796.68	33,198,820 73	15 66	17,976 00
Alberta.....	1,234,647 53	17,554,966 53	14 22	39,765 00

The number of permits and leases issued, the number of leases in good standing, and the combined revenue derived therefrom for the provinces of Manitoba, Saskatchewan, and Alberta for the fiscal year were as follows:—

	Permits issued	Leases issued	Leases in good standing	Revenue derived
				\$ cts.
Grazing.....	5,329			60,362 12
Cultivation.....	365			19,357 82
Hay.....	1,410			3,832 34
Timber.....	385			26,300 30
Coal.....		13	76	20,377 49
Petroleum and natural gas.....		168	1,064	101,864 17
Special.....		2	38	847 50

Registration Fees.—During the fiscal year 705 assignments of sales and leases were registered, comprising lands in the provinces of Manitoba, Saskatchewan, and Alberta. The fees amounted to \$2,591.45.

REVENUE AND EXPENDITURE STATEMENTS

The total net revenue collected for the fiscal year was as follows:—

Manitoba.....	\$ 35,321 31
Saskatchewan.....	1,413,230 16
Alberta.....	812,214 31
	<u>\$ 2,260,765 78</u>

The revenues collected for the fiscal year (less principal moneys and less expenditure) and paid to the provinces of Manitoba, Saskatchewan, and Alberta, were as follows:—

Province	Revenue other than principal moneys	Expenditure	Amount paid to province
	\$ cts.	\$ cts.	\$ cts.
Manitoba.....	18,517 52	18,446 37	87 18
Saskatchewan.....	358,298 15	54,762 40	303,535 75
Alberta.....	449,070 48	37,086 69	411,983 77

The balance standing to the credit of the School Lands Fund for each province as on March 31, 1930, and the interest paid on the investment for the fiscal year 1929-30 were as follows:—

Province	Total amount at credit of fund	Amount invested in debenture stock	Interest paid on investments
	\$ cts.	\$ cts.	\$ cts.
Manitoba.....	5,905,584 82	5,905,000 00	294,525 00
Saskatchewan.....	17,724,632 89	17,724,000 00	853,225 00
Alberta.....	9,500,822 68	9,500,000 00	459,175 00

Statements herewith lettered A, B, and C respectively show the revenue collected from each of the provinces of Manitoba, Saskatchewan, and Alberta for the fiscal year, duly classified.

Statements herewith lettered D, E, and F respectively show the balance standing to the credit of the School Lands Fund for each province as on March 31, 1930, after deducting amounts invested in debenture stock as provided for by Order in Council.

Mining Lands

In all probability the fiscal year ending March 31, 1930, will be the last that the annual report of the Mining Lands Division will cover the activities for twelve months with respect to the disposal of mining rights in the three Prairie Provinces and in connection with certain minerals in the Railway Belt and Peace River Block, province of British Columbia, due to the enactment of legislation providing for the transfer of the administration of these resources to the respective provinces.

The greatest activity during the past fiscal year, so far as the disposal of mining rights is concerned, was in connection with petroleum and natural gas leases, particularly in the province of Alberta, but the mining of coal still holds first place as regards production of minerals. The preliminary figures show that there were 7,728,453 tons of coal mined in the West, outside of British Columbia, during the calendar year 1929.

The Central Manitoba Mines Limited continued operations of their mine and mill in central Manitoba. During the year 1930 part of the metallurgical works of the Hudson's Bay Mining and Smelting Company, operating the Flin Flon mine, will be in operation.

The aeroplane was again used extensively for prospecting and exploring purposes by several mining companies engaged in the search for new prospects in the Northwest Territories, and extensive development work was carried on by one company on a group of mineral claims situated south of Great Slave lake. There are also indications that some of the iron deposits on the islands in Hudson Bay may be thoroughly tested in the near future.

In Yukon Territory there have been produced by means of placer mining operations 43,433.80 ounces of gold, and from ores the production was 2,510,334.10 ounces of silver and 8,678,120 pounds of lead. The total value of the mineral production in Yukon Territory for the fiscal year is estimated at \$3,154,316.06. For this purpose the placer gold was valued at \$20 per ounce. The one concentrating mill in operation in Yukon Territory, which is operated by the Treadwell Yukon Company, Limited, and which is situated in the Mayo district, was in continuous operation during the year.

All mineral rights alienated under the provisions of the existing mining regulations have been disposed of by lease or permit only for limited periods of time, and such rights are not now sold. The sources of revenue of this branch are confined to fees, rentals and royalties, and from these several sources there was collected during the fiscal year the sum of \$1,638,597.74, an increase of \$585,016.06 over the previous year.

Under the provisions of the Petroleum and Natural Gas Regulations, expenditures incurred in actual development on areas acquired under lease may be accepted in satisfaction of rentals, which should otherwise be paid in cash, and under this provision, rentals due to the Crown, amounting to \$532,142.27 were satisfied by such expenditures, and so reduced the revenue of the branch to that extent. The total revenue in cash, together with expenditures accepted in lieu of rental, amounted to \$2,170,740.01 during the year.

The provision of the regulations for the disposal at auction of petroleum and natural gas rights in areas comprised in cancelled leases, has resulted up to date in the payment to the Crown of the sum of \$199,031.62 on account of bonus, of which amount the sum of \$151,731.97 was collected during the last fiscal year.

That portion of the revenue of Yukon Territory derived from mining rights only, including the export tax on gold shipped from Yukon Territory, amounted to \$67,723.30.

Petroleum and Natural Gas.—There are now in force 16,139 petroleum and natural gas leases affecting Dominion lands, and embracing a total area of 2,169,102.33 acres; distributed as follows: In Manitoba, 49 leases, comprising 14,057 acres; in Saskatchewan, 109 leases, comprising 14,832 acres; in Alberta, 15,950 leases, comprising 2,129,490 acres; in British Columbia, 26 leases, comprising 6,670 acres; and in the Northwest Territories, 5 leases, comprising 4,053.33 acres.

Petroleum prospecting permits to the number of 164 have been issued, comprising 74,748 acres, and of these 125 permits were issued during the fiscal year under review.

The collection of royalty was commenced on January 1, 1930, and since that date to the end of the fiscal year the sum of \$33,854.64 was paid on this account. The number of petroleum and natural gas leases issued during the last fiscal year was 9,139, comprising a total area of 1,098,577 acres, and the total revenue from this source for the year amounted to \$1,047,994.37.

There have been issued, since the regulations governing the leasing of petroleum and natural gas rights were established, 50,357 leases. The total revenue which has been derived from this source since the beginning, has amounted to \$7,039,843.99, and the total expenditure which has been accepted in lieu of rental during the same period was \$4,129,850.63. On lands leased from the Crown 540 wells have been drilled to depth for the discovery of oil and gas. In the province of Alberta there have been produced during the year 903,337 barrels of oil from wells situated on Dominion lands. Many of the localities of Alberta, including the cities of Edmonton, Calgary, Lethbridge, and Medicine Hat, are supplied with natural gas produced from areas, most of which have been leased under the provisions of the regulations established by this Department.

Coal.—Prior to the year 1906 coal mining rights were disposed of by sale, at a price varying from seven to ten dollars an acre, and subject to the payment of a royalty of ten cents per ton on the quantity of coal mined, which royalty, however, has since been reduced to seven cents per ton. Such rights have since been disposed of by terminable lease, at a rental of one dollar an acre per annum and a royalty at the rate of five cents per ton. The area of coal mining rights disposed of up to 1906 by sale was approximately 245,070 acres, and the total revenue which was collected from the sale of such rights was \$1,565,833.88. The total number of coal mining leases in force at the close of the fiscal year was 693, comprising a total area of 241,909 acres, distributed as follows: Alberta, 609 leases, comprising 233,884 acres; Saskatchewan, 79 leases, comprising 4,145 acres; British Columbia, 3 leases, comprising 3,740 acres; Yukon Territory, 1 lease, comprising 40 acres; and Northwest Territories, 1 lease, comprising 100 acres. The total number of coal mining leases issued during the year was 101, comprising 27,161 acres, and the total revenue collected during the year for rental of such rights was \$158,901.54.

The following statement shows the amounts which have been collected on account of royalty on coal mined from lands in the western provinces, the Northwest Territories and Yukon Territory, respectively, during each of the last twenty three years:—

Year	Alberta		Saskatchewan		British Columbia		Yukon Territory		Northwest Territories	
	\$	cts.	\$	cts.	\$	cts.	\$	cts.	\$	cts.
1907-1908.....	7,621	67		4 30	Nil		1,543	38	Nil

The total revenue derived from fees, rentals and royalties collected in connection with coal mining rights during the year amounted to \$414,248.05.

Quartz and Placer Mining.—Placer mining claims are held under yearly lease, subject to an annual expenditure in development work. Quartz mining claims are similarly held until development has sufficiently progressed and the claim has been surveyed under proper instructions, when a lease is issued for a continuous period of twenty-one years, subject to royalty only.

During the year, entries were granted for 4,759 quartz mining claims, of which number 3,721 were for claims in the western provinces, for the most part in Manitoba. Entries were also granted for 110 placer mining claims staked and applied for during the year, and 1,894 such claims, previously acquired, were renewed for another year.

Final leases have been granted for 1,247 mineral claims, comprising a total area of 61,354.62 acres, of which number 218 leases were issued during the fiscal year, comprising an area of 8,660.33 acres.

In the Mayo district of Yukon Territory, where the Treadwell Yukon Company, Limited, operates a concentrating mill, this company shipped 6,909.49 tons of ore and concentrates. Only ore containing values in the neighbourhood of \$200 per ton is shipped. The report of the Gold Commissioner indicates that there was an increase in the production from ores mined in the Mayo district during the year, and it is expected that over ten thousand tons of ore will be shipped during the year 1930.

Quarrying.—Under the Quarrying Regulations, which provide for the disposal of Dominion lands containing limestone, granite, slate, marble, gypsum, marl, gravel, sand, clay, and other like substances, 344 leases are now in force, comprising an area of 10,990.74 acres. The revenue collected from this source during the year amounted to \$12,928.81.

Bituminous Sands.—Owing to the great interest taken in the development of bituminous sands, otherwise known as tar-sands, situated on the Athabaska river, in the province of Alberta, it was decided to enact new regulations for the disposal of such rights. It is proposed in the new regulations that an applicant may obtain a permit covering a certain area of land, on which he shall erect a plant for the treatment of bituminous sands, and, when it has been demonstrated

that the plant is capable of separating the petroleum and petroleum products from the sands on a commercial basis, the permittee will be given an opportunity of acquiring a lease of a considerable area of land on payment of rental at fifty cents an acre.

The total revenue which has been derived by the Department from the disposal of tar-sand rights amounts to \$41,601.73. There are three leases now in force, comprising a total area of 3,643.20 acres.

Alkali.—Regulations have been made for the disposal of natural accumulations of soluble mineral salts, comprising, for the most part, sodium and magnesium sulphates found in a comparatively pure condition in certain of the sloughs and shallow lakes of southern Saskatchewan. Under these regulations, 43 leases have been granted, comprising a total area of 15,250.9 acres, and the revenue derived from this source during the fiscal year amounted to \$4,052.52. A number of these locations have been developed, plants for the purification and refining of the product have been erected at a very considerable cost, and large quantities of the refined salts have been disposed of to the different pulp and paper companies for use in the manufacture of certain grades of paper.

Gold Royalty.—The total amount which has been collected for royalty on gold obtained from placer deposits in Yukon Territory up to March 31, 1930, was \$4,968,155.96, of which amount \$16,438.46 was collected during the fiscal year. For the purpose of estimating royalty, the gold is valued at \$15 an ounce, which is below its real value. The total value of the gold which has been produced from placer mining operations in that territory might conservatively be placed at \$167,991,136.

Dredging.—Three leases to dredge for minerals in the beds of rivers in Yukon Territory are now in force, comprising a total river stretch of 14.43 miles. The total revenue derived from this source up to March 31, 1930, amounted to \$202,406.39. These leases comprise portions of the bed of the Klondike river.

For the purpose of gold recovery there are six dredges engaged in mining in Yukon Territory, all of which are being operated by hydro-electric motive power.

Forty leases to dredge for minerals in the beds of rivers in Manitoba, Saskatchewan, and Alberta are now in force, having a total frontage of 184½ miles. Of these leases, thirty-five are in Alberta, four in Saskatchewan, and one in Manitoba. The total revenue derived from this source amounted to \$66,209.01, of which sum \$527.20 was collected during the fiscal year.

Hydraulic Mining.—The regulations for the disposal of hydraulic mining locations in Yukon Territory were withdrawn by Order in Council dated February 4, 1904, but the leases then in force were not affected by such withdrawal. There are still five hydraulic mining locations held under lease, comprising a total area of fifteen square miles. Rentals, amounting to \$179,007.34, have been collected on account of such locations, the amount collected during the fiscal year being \$2,817.34.

Water Rights.—There are now in force in Yukon Territory 504 grants to divert water for mining purposes, under the provisions of the Yukon Placer Mining Act, which grants aggregate a total of 13,332 miner's inches.

The report for the fiscal year from the Gold Commissioner of the Yukon Territory dealing with mining in that territory is attached.

REPORT OF THE GOLD COMMISSIONER, DAWSON, YUKON TERRITORY, REGARDING
MINING

PLACER GOLD MINING

The amount of placer gold, mined during the year on which royalty export tax was paid, was 44,197·92 ounces, an increase over the previous year of 559·09 ounces.

Yukon Consolidated Gold Corporation, Limited.—This company operated dredge *Canadian No. 2* on Hydraulic Mining Lease No. 18. The dredge commenced digging on May 24, and closed down on October 1, having dredged 1,300,000 cubic yards. All of this was artificially thawed by water pumped from the Klondike river and distributed through the system by pipe lines. Three drills bored the pits in which the pipes were inserted in order to force the water to bedrock. Water was delivered under a pressure of forty-five pounds at the points.

Dredge *Canadian No. 3.*—This dredge, which had been idle since 1918, was reconditioned and commenced digging on September 25. It closed down on December 1, having dredged a total of 450,000 cubic yards. It also operated on Lease No. 18.

Dredge *Canadian No. 4.*—This dredge commenced digging on June 6, on Lease No. 18, and closed down on November 1, having dredged 1,100,000 cubic yards during the season.

Dredge *New North West No. 1* commenced operations on Upper Dominion creek on June 22, and closed down on November 1. A total of 600,000 cubic yards was dredged. All of the ground was artificially thawed, a thawing plant of 1,600 points being operated. The water for thawing was pumped from Dominion creek by two electrically driven pumps and delivered at the points under a pressure of thirty pounds.

Dredge *New North West No. 2* also operated on Dominion creek just below the town of Granville. It commenced operations on May 28, and closed down on November 21, having dredged 460,000 cubic yards. A thawing plant of 1,000 points thawed ground ahead of the dredge. The water flowed by gravity through ditches constructed under Water Grants Nos. 9024 and 9025.

Hydro-electric Power Plant.—This plant, which is operated by water taken from the north fork of the Klondike river under Water Grant No. 10, operated continuously throughout the year. Power was furnished for all the dredges which operated throughout the season. Two electrically driven shovels were operated digging an extension of the power canal 15·6 miles in length, which, when completed, will carry 20,000 inches of water from the south fork of the Klondike and discharge it into the north fork above the intake of the present ditch.

Power was also furnished to the Dawson Electric Light and Power Company for lighting the city of Dawson, and to the Dawson City Water and Power Company, for pumping and heating the water circulated through the city mains. A total of 11,565,000 K.W.H. was generated and transmitted to the various operations during the year.

Transmission Lines.—One hundred and thirty miles of high-tension power lines, which connect the power plant with the various sub-stations, were maintained in an efficient state of repair.

Hydraulics.—Two nozzles were operated at Crofton gulch and two on Lovett gulch. Water for these operations was supplied through the Twelve-mile ditch. A total of 530,000 cubic yards of gravel and bedrock was sluiced

during the season. Repairs to the ditch commenced on May 1, and were suspended on November 1. Hydraulicicking commenced on May 15, and closed on September 30.

Transportation.—Four caterpillar tractors, four trucks and nine cars were in constant use during the season. Two new trucks were purchased in 1929. On an average two hundred and twenty-five men were employed during the season.

Other Placer Operations.—Many individuals and miners working in partnership were engaged in placer mining, and experienced a successful season. The prospecting leases on Thistle creek have been renewed. Considerable work was done on them last summer with a drag-line scraper, and it is the intention to prosecute the work vigorously this summer. Prospecting leases have also been issued as follows: Five miles on Selwyn river; one mile on Nansen creek; one mile on Johnson creek (a tributary of the McQuesten river); one mile on Upper Bonanza; one mile on Victoria gulch (a tributary of Upper Bonanza); two miles on Gauvin gulch, and one mile on O'Neil gulch, which are also tributaries of Upper Bonanza, and one mile on All Gold creek.

The dredge which was lying idle in the Glacier district for many years was taken over by a new company, and they commenced operations last summer on Sixtymile creek. They employed from twelve to fifteen men during the season and dredged about 100,000 cubic yards.

LODE MINING

Dawson District.—Development work has been continued on the Lone Star group of claims on Victoria gulch. Last summer they drove a tunnel in unbroken ground 82 feet south of the old tunnel for a distance of 205 feet. The extension of the Carthey vein was crosscut 146 feet from the entrance. The vein at the point of intersection was about four and one-half feet wide. On an average six men were employed during the season. It is the intention of the company to prosecute operations during the summer of 1930.

Claims on the Fifteenmile, on the Yukon river, on Little Twelvemile, on Eldorado creek, and on Gold Run are still being held, but no extensive work has been done. The conglomerate claims on Indian river are in the same position as last year, several claims being held with the hope of obtaining capital for development.

Mayo District.—The principal operator in this district is the Treadwell Yukon Company, Limited. At the end of the year this company had under option, purchase, or located in its own name, sixty-three claims, or a total area of 1,677 acres, divided into seven separate groups for mining and prospecting purposes. During the year the company acquired the Silver King group of nine claims with an area of 274 acres. This property is located on Galena hill.

During the summer months the company shipped 6,909.49 tons of ore and concentrates containing 3,102,093 ounces of silver and 7,810,493 pounds of lead, which had a metal value of \$1,586,756.06 for the silver, \$528,360.10 for the lead, and \$3,397.66 for the gold ore, a total value of \$2,118,513.82. In addition, the company was instrumental in shipping for individual operators a total of 690 dry tons containing 185,503.92 ounces of silver and 952,092 pounds of lead, the smelter value of which was \$95,295.13 for the silver and \$62,888.03 for the lead, a total of \$158,183.16. The total production of the camp was 7,599 tons valued at \$2,276,696.98.

New Construction.—At the main camp of the Treadwell Yukon Company, Limited, a new 180-h.p. engine was installed to drive the compressor. At the Mastiff group a 1,500-foot transmission line was built to supply electrical energy for that operation.

At the Elsa group, a new bunk house and a mess house with a capacity for taking care of thirty men, were erected, as well as a blacksmith shop, compressor and change room. A 110-h.p. engine was installed to drive a new 500-cubic foot air compressor.

At the Silver King group, a new bunk house, two head frames, two ore bins, a large compressor, a hoist house and a blacksmith shop were built. This mine is equipped with a 165-h.p. engine, driving a 600-cubic foot compressor and a 75-kw. generator.

Sixteen miles of road were also constructed from the Mayo-Keno road junction at Williams creek, to facilitate handling supplies to the Mastiff, Elsa, and Silver King groups.

In the town of Mayo the company installed a 110-h.p. engine to drive a 60-kw. generator for lighting the town and furnishing power.

Outside of the operations of this company, considerable prospecting and development work has been done by individuals with promising results.

In the Beaver River district prospecting was carried on by the Consolidated Mining and Smelting Company on properties which they had under option. They employed eight men during the months of July and August, carrying out preliminary prospecting with a diamond drill. Several holes were drilled, some to a depth of 700 feet, but they have since released their options and have moved the machinery about thirty-five miles farther north on Silver hill, to the Carpenter and McLean group of claims, where drilling operations will be carried on during the coming summer.

The outlook for the future of this camp is promising, notwithstanding the drop in the price of silver. There will be more activity by individual prospectors and claim owners on the different hills.

Timber and Grazing

Despite the financial stringency which prevailed during the latter part of the fiscal year, the activities in timber, grazing, and hay continued at a high level. The total amount derived from these sources for the year was \$1,131,748.42. Although this amount represents a decrease of \$254,643.49 as compared with the previous year, yet it was considerably higher than any year prior to 1926.

During the spring and summer conditions in the lumber industry were very active, but unfortunately, owing to a great decline in building operations later, more especially in the rural sections, the demand for lumber was considerably curtailed. Because of these conditions, while the quantity of lumber manufactured shows an increase of over sixty million feet board measure as compared with the previous year, a large portion of this remained unmarketed.

Owing to the business depression in the autumn of 1929, there were fewer licence berths sold at public auction and fewer permit berths applied for. The main falling off in revenue occurred here, the decrease as compared with the previous year amounting to a little over \$210,000.00.

In the year 1925 grazing regulations were established allowing for the granting of twenty-one-year leases in the provinces of Saskatchewan and Alberta, and in the Railway Belt of British Columbia, and as this provided for more permanency of tenure, a decided impetus was given to stock raising. In spite of a lack of moisture in certain districts, a marked advance was made by holders of leases on Dominion lands. During the year 1,307 new grazing leases were issued making a total of 11,479 now in existence, covering an area of 7,221,334 acres, representing an increase of 21,443 acres over the previous fiscal year, and 494,319 acres over the year 1927-28. Stock returns show an increase over 1928-29 of 22,996 head of cattle, 23,190 horses, and 39,913 sheep, grazing on Dominion Government leaseholds.

There was a satisfactory increase in the number of hay permits taken out during the year. A total of 2,359 permits was issued to cut 26,095 tons, an increase of 359 permits, and 7,282 tons over the previous year. The total revenue from this source amounted to \$10,786.15 being an advance of \$3,799.58 as compared with 1928-29.

TIMBER

The areas of timber berths under licence and under permit were as follows:—

Province	Square miles under licence	Square miles under permit
Manitoba.....	925 15	1,117 44
Saskatchewan.....	781 46	138 71
Alberta.....	1,167 14	349 25
British Columbia.....	1,587 49	82 74
	4,461 24	1,688 14

During the year there were 299 new berths granted, as follows, 24 licence, 34 permit, 86 fire-killed, 118 cordwood, 26 portable sawmill and 11 fringe.

The total number of berths held under licence and permit were 1,375, this being a decrease of 37 berths as compared with the previous fiscal year.

The following statements show the number of berths upon which operations were conducted, also the quantities of material manufactured and marketed, during the year under review.

Agency	Number of berths upon which operations have been conducted	
	Under licence	Under permit

GRAZING

The total area held under lease as of March 31, 1930, was 7,221,334 acres, comprising 11,479 leases as follows:—

Province	Number of leases	Area under lease
		acres
Manitoba.....	244	95,885
Saskatchewan.....	6,952	3,463,408
Alberta.....	3,917	3,208,289
British Columbia.....	366	453,752
	11,479	7,221,334

Ordinance, Admiralty and Public Lands

There was a substantial increase in the work of this division, owing to the number of applications received to purchase fractional and accrued areas.

When this work was taken over there were over 1,400 accounts and each purchaser of Dominion lands was furnished with a copy of his account from the sales register. Where the terms of sales were seriously in arrears the purchaser was given a reasonable opportunity to place the account in good standing. Many settlers remitted substantial payments and in a few cases the full amount of the indebtedness was remitted so that patent could issue. Due to this action the revenue for the year shows a substantial increase and there was derived from the sale of fractional areas and accrued lands the sum of \$98,012.90, an increase of \$45,540.16 over the fiscal year 1928-29. The revenue from Ordinance lands was \$30,276.65 in comparison with \$24,830.09 for the previous year.

New applications to purchase received during the year numbered nearly five hundred and sales were made in 320 cases for a total of 12,882 acres made up by provinces as follows:—

Province	Number of sales	Acres
Manitoba.....		
Saskatchewan.....	25	1,147
Alberta.....	122	4,933
British Columbia.....	135	5,118
	38	1,684

Letters patent to the number of 295 were issued to the purchasers of fractional and accrued lands for an area of 19,639 acres.

In the early settlement of the prairies grants of land were authorized by Parliament to aid in the construction of colonization railways. For years it was the understanding of the Department that the grants were of the surface only and did not include the minerals underlying these lands. However, the question became the subject of litigation and when brought before the Imperial Privy Council it was held that the title to the minerals should pass to the railway companies. During the year letters patent to the number of 101 were issued to the Calgary and Edmonton Railway for minerals underlying lands

where the surface had been patented to nominees of the company. There were issued to the Canadian Pacific Railway 179 patents for an area of 3,856 acres, being mostly lands taken for right of way and other railway requirements. Other railways were granted patents to the number of 177 for an area of 17,830 acres, a portion being for land subsidy, and other work was done preliminary to the issuance of letters patent for many additional lands.

Investigations have been made in several registry offices relative to the title to Ordnance lands. This information was got as a preliminary to the making of surveys when an endeavour will be made to place the lands on a revenue-producing basis.

REPORT OF THE FINANCIAL CONTROLLER

MINING SUPERVISION AND INSPECTION

REPORT OF THE SUPERVISORY MINING ENGINEER, C. C. ROSS

GENERAL

The past year has been one of steady progress in the investigation and development of mineral resources upon lands falling within the supervision of the Branch. The most striking activity is to be recorded in connection with the rapid extension of the Turner Valley oil and gas field, beginning in the latter part of last year, and leading to the location and drilling of new wells on a "boom" scale in the earlier part of the year under consideration. In the case of mining for metallic ores, serious efforts were made to investigate those deposits previously located in northern Manitoba and Saskatchewan, great progress being made in the heavy constructional programs already started at the major ore bodies of Flin Flon, and Cold Lake. The centre of gravity of the search for new districts may be said to have been transferred northwards, the eastern portion of the Northwest Territories being closely studied by organized expeditions based on aerial transport, the area of interest gradually extending westwards.

In addition to the office already established at The Pas in northern Manitoba, it was found necessary to open one at Winnipeg to enable the same services to be rendered to the mining community in central Manitoba as had shown such gratifying results in The Pas. The growing work of the Calgary office called for further additions to the staff and equipment, particularly in regard to subsurface work, and the study of methods of prevention of the waste of gas, a matter that has become increasingly important.

As in previous years, at the request of the Department of Indian Affairs, the engineers of the Calgary office have carried out inspections on the Stony, Sarcee, and Blood Indian reserves in regard to the petroleum and natural gas operations at those places.

OIL AND GAS

The year 1929-30 has shown a very gratifying increase in the production of both oil and gas, fully justifying the faith of the pioneers in the search for these minerals in Western Canada. As was to be anticipated from the trend of drilling activity in the previous year, the major share of this increase is due to the completion of development tests in Turner Valley. In fact, it may be affirmed that few, if any, deep oil areas have shown such a rapid rise in output from the inception of intensive drilling.

This increase of production, which had already begun to become noticeable towards the end of the previous year, gave the impetus to marked activity in the organization of new companies to undertake the drilling of wells in and adjacent to Turner Valley, where for a time a large number of wells were drilling. The financial depression occurring later, somewhat curtailed this activity but not before the productive area was considerably extended, notably towards the south end of the field. But little attention has been bestowed on the north end.

As a consequence of the footage drilled in and around Turner Valley, the Calgary office has been called upon to collect and examine a vast amount of sample material produced from the formations encountered. It is gratifying to

be able to record that the sampling has been carried out by operators in an exemplary manner, and the fullest co-operation with the office shown in its handling. The information thus gleaned as to the subsurface conditions of these areas, has therefore been of a high order of reliability, and it has been possible to recognize structural details which the smaller scale operations of previous years had not made possible. In accordance with the established custom, the well samples have been transferred to the Geological Survey for more detailed study, but the great bulk of these and the need of an immediate recognition of "markers" in the wells during drilling, both for the purposes of the Calgary office in the work in connection with the administration of the petroleum and natural gas regulations, and for the work of the Geological Survey, led to the establishment of closer co-operation between the two departments towards the close of the year.

The closer study of the subsurface geology has confirmed the more complex structure of Turner Valley that had been suspected to prevail since the drilling of wells began along the eastern margin of the valley. An event of great importance in this connection has been the proof obtained from the Sterling Pacific well on section 33, township 18, range 22, west of the 5th meridian, that younger formations underlie the productive limestone. This may be explained by the limestone having been thrust over the younger rocks from the westward and has, as a corollary, the occurrence at very much greater depth of the same productive horizons as have already been developed in Turner Valley. Whether the resulting structure in depth, which extends to the eastward from the proven Turner Valley field, can be reached by the drill remains to be demonstrated. Considerable drilling activity began to the west of Turner Valley, but production had not been obtained at the close of the year.

Operations at other points in Alberta were satisfactory, and productive oil has been proven at three points widely separated. The first of these, Meridian No. 1 (old Advance No. 3), located in township 45, range 1, west of the 4th meridian, on being drilled to 1,822 feet penetrated oil-bearing sand. The well was put on production during June and has been pumped intermittently since then. Continuous pumping, however, has not been possible, owing to lack of storage. The oil is 13 degrees Beaumé in gravity and carries only a small percentage of water. Two other wells are now in process of drilling on territory adjoining the discovery well.

Oil bearing formation was also penetrated at the Fuego Oil Company's No. 1 well south of Oyen and located in township 25, range 4, west of the 4th meridian. Spasmodic drilling has been in progress at this well for several years and the well was drilled without successful water shut-off being carried out. The present management, after considerable drilling difficulties, succeeded in partly shutting off the water, and carried the drilling down to 3,133 feet, where the first oil was encountered; the oil grades 10.2 degrees Beaumé. From a chemical analysis of the water it would appear that this is from a higher horizon and not in conjunction with the oil; it is therefore probable, that further wells drilled on a strict water-shut-off specification will develop a good production of commercial oil.

In the Skiff area Devenish Petroleums Limited drilled wells Nos. 2 and 3; the former of these met with negative results, as the location was found to be off structure. No 3, located close to No. 1, encountered the oil sands at 3,054 feet. The oil from this depth was of 19.5 degrees Beaumé gravity and under the departmental test gave a daily output of thirty-six barrels net of clean oil. The oil carries a small percentage of water but this, in all probability, is due to migration from No. 1 well where water is present. A test by the Dauntless Oils Limited considerably to the west of the Devenish wells, although proving the presence of a petroliferous formation, met with negative commercial results and has been abandoned.

The most important oil discovery during 1929 was that made in the Red Coulee area, five miles west of Coutts. The Vanalta No. 1 well, located in township 1, range 16, west of the 4th meridian, penetrated the productive sand at 2,467 feet, the gravity of the oil being 31.1 degrees Beaumé free from water. As this discovery has all the earmarks of a commercial pool, public interest was at once aroused on both sides of the international boundary, and several wells were at once started. Four of these have encountered commercial oil and are now in production, three being in the United States and one in Canada. At present four wells are being drilled on the Canadian side and many more are projected.

The remaining discovery was made at Kinsella, where the Duluth Syndicate, in their No. 1 well, located in township 48, range 10, west of the 4th meridian, discovered commercial gas at 2,080 feet; the initial volume exceeded twenty-seven million cubic feet per day under a pressure of 750 pounds per square inch. Further wells are projected in this area. The gas discovery in the Cypress hills south of Medicine Hat reported in last year's report was not conclusively tested as the initial well had to be abandoned. A second well is nearly ready to begin drilling.

The occasion is opportune to mention that all of the new discoveries made in 1929, excepting that at Skiff No. 3, were made solely with cable percussive tools, proving conclusively that when this drilling system is efficiently supervised and the drilling done by competent cable drillers, deep wells can be drilled and satisfactory results obtained.

At several points in Alberta deep well prospecting is in progress; of these the most important are being drilled at Spring Coulee, township 4, range 23, west of the 4th meridian, and at Duvernay, township 55, range 12, west of the 4th meridian. These two tests are being drilled with the rotary water flush system but with considerable coring of the formations encountered. Efforts to prove suitable underground structure on the prairies where oil and gas may have accumulated continue to be carried out, and although results are not conclusive the geological information gained to date is of great value.

Drilling in both Saskatchewan and Manitoba has been spasmodic and has not brought to light anything of importance. These attempts in most cases are handicapped by the isolation of the locality and the consequent difficulty in obtaining management and equipment. However, despite such drawbacks those in charge of operations deserve much credit for the work done, often under very unfavourable conditions.

PRODUCING WELLS

In order that a proper understanding of the category of producing wells be arrived at, it should be pointed out that a number of wells produced oil while drilling, others are reckoned as completed although they have not as yet produced oil or gas, and a number of wells have produced oil and gas for a number of years or are susceptible of producing. Many gas wells were closed in for the entire year or for most of the year. No census of gas wells susceptible of producing is therefore here attempted, but the collective status of oil producers is as follows:—

- 33 wells produced naphtha and gas in Turner Valley;
- 14 wells produced light crude in Turner Valley; of these, 4 also produced naphtha;
- 2 wells produced light crude in Red Coulee;
- 6 wells produced heavy crude in Wainwright;
- 1 well produced heavy crude in Skiff and another well is a potential producer;
- 1 well produced heavy crude in the Ribstone field.

This makes a total of fifty-three wells producing oil, four of which produce two grades. A number of companies continued the work of test drilling not directly intended to produce oil and gas, but rather to discover structure favourable to deep drilling. During the fiscal year in Alberta, 164 holes made an aggregate footage of 55,718 feet, while in Saskatchewan five holes made 3,583 feet.

PRODUCTION

Production in barrels for the fiscal year ended March 31, 1930, and for the previous year, together with per cent increase in production, is as follows:—

Year ended	Turner Valley		Red Coulee	Wainwright	Ribstone	Skiff	Total
	Naphtha 60° or over	Light crude 30° to 60°	Light crude 30° to 60°	Heavy crude 30° or under	Heavy crude 30° or under	Heavy crude 30° or under	
Mar. 31, 1930.....	1,038,460	70,760	7,294	14,229	2,839	1,432	1,135,014
Mar. 31, 1929.....	449,247	74,524	7,953	531,724
Per cent increase.	131	-5	79	91

Only in Wainwright was any water produced with oil, and in amounts relatively small in comparison with total oil produced.

STORAGE

Oil produced was consumed within short periods following production, the demand being such that in addition, considerable quantities of crude and refined products were imported. The amount of stored oil was at all times small in comparison with rate of production.

PRICE CHANGES

Naphtha is graded for refinery purposes on a colour basis, but for the purpose of these records, all oil produced from the lime in Turner Valley, and any of a gravity higher than 60 degrees coming from above the lime are grouped together. Clear naphtha ranged from \$3.44 to \$3.95 per barrel; discoloured naphtha from \$3.20 to \$3.50. Light crude prices varied to some extent with the gravity of the oil and point of production. Turner Valley light crude ranged from \$2.40 to \$3.10, while Red Coulee crude was worth \$1.90 at the refinery. Heavy crude prices are not available, as it was distilled practically at the well mouth and sold as distillate, etc. Its value may be estimated at \$1 per barrel.

OIL PIPE LINES

A four-inch line from Turner Valley to the Imperial Oil Refinery at Calgary, laid in December, 1925, handles both naphtha and light crude. During the year a four-inch line was laid from Turner Valley to the Regal Refinery at Calgary which handles both products. A composite pipe line two inches to four inches has been laid from Red Coulee field to the Maple Leaf Refinery at Coutts, but is not yet in use.

DRILLING ACTIVITY

Turner Valley and adjoining foothills between the Highwood and Ghost river areas are here grouped together, the remainder of Alberta being similarly treated as a unit. During the fiscal year, in the foothills area, 122 wells made 313,788 feet of hole, and of these wells, 88 were started during the year. At the close of the year 51 were drilling, 41 suspended, 10 abandoned, and 20 completed. Elsewhere in Alberta, 55 wells made 79,774 feet of hole. Of these, 42 were started during the year. At the end of the year 13 wells were still drilling, 21 suspended, 4 abandoned, and 18 completed, 10 being completed as gas wells.

In Saskatchewan, 6 wells made 8,044 feet; of these, 4 were started during the year. At the end of the year all were either suspended or abandoned. In Manitoba, 1 well was drilled to 1,012 feet. In British Columbia, 2 wells made 340 feet of hole. In addition, some work was done in the Flathead area, but as these wells did not report to this office, no accurate account of their operations can be given.

CONSERVATION OF GAS

As pointed out in the annual report for the fiscal year ended March 31, 1929, the surplus of gas in Turner Valley had assumed large proportions, necessitating burning for safe disposal. The burning of waste gas has taken place since the bringing in of the well known as Royalite No. 4 in 1924, but until towards the close of the fiscal year mentioned, it assumed large proportions only during the season of small demand in the summer.

So soon as the waste became not only great, but continuous, joint action was decided upon by the Dominion and Alberta governments, and a committee was appointed in May, 1929, to investigate and report upon the situation. The investigation was to explore the possibilities of the following:—

- (1) Conservation of the gas by storage underground.
- (2) Restriction of production.
- (3) Utilization of the gas (a) as a fuel, or (b) as a source of other materials such as carbon black, chemical products, etc.

The Department of the Interior was represented on the committee, which was under the chairmanship of Dr. C. Camsell, Deputy Minister of Mines, by Mr. C. C. Ross, Supervisory Mining Engineer.

The study of these problems, which has been carried on by officers of the department in the field since waste became apparent, was continued and extended, and in addition the Supervisory Mining Engineer carried out an investigation in the more important fields of the United States, where analogous conditions prevail, to ascertain the latest practice there in regard to the first two points above enumerated. In the final report the committee stated that they considered that the only solution which would make conservation possible was recognition of the fact that Turner Valley was a gas field, and the formulation of rigid regulations for the purpose of controlling all phases of the gas producing industry. They found that all other measures could only be palliative.

COAL MINING

Alberta

In Alberta, coal is found in three horizons of the Cretaceous rocks and in small areas in the Tertiary. The principal localities where coal mining development has taken place are as follows:—

KOOTENAY SERIES

Crowsnest Pass District.—In this area, which includes Coleman, Blairmore, Bellevue, Frank, Hillcrest, and Passburg, the seams worked vary from six to eighteen feet and pitch up to 60 degrees. The coal lying above water-level has supplied the major portion of the output in former years, but as this easily mined coal has gradually worked out, dip workings have been developed. These lower workings require considerable pumping to keep them clear of water. The main supply of locomotive fuel for the Canadian Pacific Railway in the prairie divisions is drawn from this district. Coke ovens were formerly operated at Coleman, Lille, and Passburg, but owing to the lack of demand by the smelters of southern British Columbia, the making of coke was discontinued. Owing to the occurrence of two explosions in the Crowsnest district during the year 1926, rock dusting has been introduced as a means of preventing the spread of an explosion in the coal-dust-charged mine atmosphere. Dry-cleaning plants have been installed at the principal mines, whilst at Bellevue a wet-washer has been added to the cleaning equipment.

Canmore District.—At Canmore semi-bituminous coal is mined and is largely disposed of as railway locomotive fuel. A briquetting plant is in operation, and 26,180 tons of coal were used in making briquettes. These were sold for household fuel in the territory between Vancouver and Winnipeg. The coal measures at this point have been subjected to very complicated folding. Two seams varying from five to ten feet in thickness are being mined.

Brazeau District.—In the Nordegg area semi-bituminous coal is mined on a large scale from two seams, one seven feet and the other fourteen feet in thickness with a dip of about 12 degrees. The output is disposed of to the Canadian National Railways as locomotive fuel. A dry-cleaning plant is operated at this property.

Mountain Park District.—At Mountain Park, Cadomin, and Luscar, bituminous coal is mined on a large scale. The seams vary in thickness from five to fifty feet with dips of from 30 to 80 degrees. At Cadomin two shafts have been sunk to give access to the lower levels of the seams which have hitherto been worked above the river level. Prospecting has been carried out north of Luscar and new development is contemplated as soon as arrangements are completed for the extension of the Luscar spur, part of the Mountain Park branch of the Canadian National Railways. Since the abandonment by the Blue Diamond Coal Company of their operations at Brulé, the company have staked out large claims in the Hay River area about thirty-five miles northwest of Solomon. Surface prospecting of the coal measures in these areas has been carried out.

BELLY RIVER SERIES

Lethbridge-Taber District.—The principal operations in this formation are carried on in the vicinity of Lethbridge, where several companies have large and well-equipped plants. The seams are reached either by shafts or slopes, varying in depth from 300 to 600 feet. The seam worked is about 4 feet 4 inches thick and is horizontal. The continuity of the seam generally is interrupted

by a series of small faults varying from two to ten feet. The development started by the Cadillac Coal Company, Limited, on the Kipp-Retlaw extension of the Canadian Pacific Railway has been continued, and the property brought into the production stage and operated throughout the year. The mine is located on the northern portion of the Lethbridge field. At Taber a lower seam in this formation has been worked for several years but only small-scale operations are now being conducted. The Leland Coal Company suspended operations at the Canada West mine and the equipment is being dismantled. Seams in the Foremost beds of the above series are worked as small, country-bank-mines at several points in the southern portion of the province and supply fuel for local use.

Brazeau District.—On the Brazeau branch of the Canadian National Railways the mines operated by the Bighorn and Saunders Creek and Alexo Coal companies have continued in operation throughout the year. New equipment and coal-cutting machinery have been installed.

Coalspur District.—In the Coalspur area, the open pit mines at Stereo and Coal Valley have continued in operation. The Lakeside Coal Company—formerly the Balkan Coal Company—at Minehead have installed a new screening plant and equipment. At Hinton, on the main line of the Canadian National Railways, the operations by the Alberta Mountain Collieries, Limited, have been suspended. The Jasper Coal Company, Limited, have installed spur tracks and modern tippie and have extended their underground development, and are now on a shipping basis. Further prospecting has been carried out by means of core drills by various lessees in this district.

Grande Prairie District.—In the Grande Prairie district the coal seams worked are three feet thick, the output being disposed of for local use. Only small scale operations are being conducted.

EDMONTON SERIES

Drumheller-Rosedale-East Coulee District.—The most fully developed area and the largest producers from this horizon are located in the Red Deer valley at Drumheller, Rosedale, and East Coulee. The seams worked vary in thickness from four to nine feet.

The Drumheller Consolidated Collieries, having acquired the equipment of the Scranton mine, have utilized this for the development of their holdings on the north side of the Drumheller valley. New property is being developed by a slope into the upper or Newcastle seam. It is proposed to sink to the lower or Drumheller seam at a later period.

Sheerness District.—Smaller operations are being carried on in this series at Sheerness, where the lower coal seams are mined by both stripping and shafts.

Three Hills-Ardley District.—The upper coal horizons of this formation are worked at Three Hills, Ardley, and several small country mines along the Red Deer river. The Carbondale Coal Company's mine at Ardley was closed down during the year.

Edmonton-Pembina District.—The largest installation on the seam is at Evansburg in the Pembina district on the main line of the Canadian National Railways, sixty miles west of Edmonton, and at Cardiff on the Edmonton, Dunvegan and British Columbia Railway. During the year the annual inspections have been carried out for the purpose of checking up quantities of coal extracted from the various leases on Dominion and School lands. Samples have been collected from some of the mines and analyses made at the Calgary office for the information of the operators.

Saskatchewan

During the year, in addition to the ninety-five regular inspections, many other visits were paid to mines for various causes. An Order in Council was passed authorizing settlers in certain districts to mine coal for their own use in vacant Dominion lands. The briquetting plant of the Western Dominion Collieries operated during the greater part of the year, and briquetting now appears to be established as a permanent industry in this district, a market being found for the briquettes in Winnipeg and elsewhere. It is pleasing to note that there were no fatal accidents during the year.

QUARTZ MINING

The coming into force of the new Quartz Mining Regulations on April 1, 1929, added to the duties of the staff of the Supervisory Mining Engineer, the inspection of mineral claims for certificates of work and improvements. This entailed the covering by the mining inspectors of large areas in northern and eastern Manitoba, and northern Saskatchewan, and from Rankin inlet on Hudson bay to Great Slave lake, Northwest Territories. On these trips, many of which were made by aeroplane, detailed information was collected regarding the organization, holdings and activities of the many mining and prospecting companies operating in the various areas.

For the benefit and convenience of prospectors and others engaged in the mining industry, it was decided to issue new, specially compiled maps of the mining districts tributary to The Pas. These maps, which were compiled in the Ottawa office, were prepared in subdivisions, according to international map scale, from aeroplane surveys, and details secured from sketches of claims staked, and from first-hand information gathered by close contact with the mining areas. Blue prints were run off and distributed through The Pas office. Owing to the growing activity in the Winnipeg district, particularly in the Rice Lake and Lac du Bonnet Mining division, a sub-office was opened in Winnipeg. During the year 57 claims were inspected for certificates of work, and 160 for certificates of improvement. Many of these inspections were made by canoe and outboard motors and 7,827 miles in 96 flying hours were covered by aeroplane.

PROSPECTING ACTIVITIES

The following five companies were active in prospecting in the Northwest Territories, Manitoba, and Saskatchewan:—

Northern Aerial Minerals Exploration Limited.—A number of this company's planes were in service, whose main activities were centered in the pre-Cambrian areas west of Hudson bay, with their base at Baker lake. Two other parties based at Oxford lake reported some interesting country east of God's lake on God's river, and in the vicinity of Red Sucker lake, Saskatchewan.

Dominion Explorers, Limited.—Planes belonging to this company were very active in the Northwest Territories, operating to the west of Hudson bay and along the Arctic coast from bases at Tavane, Baker lake, and the Burnside river (Bathurst inlet). The company acquired a group of claims at Axis lake, east of lake Athabaska. After doing considerable diamond drilling and trenching, operations were closed down, and the equipment moved farther north for the opening of the ensuing season.

Nipissing Mining Company.—Prospecting was confined by this company to the country tributary to Mistake bay, N.W.T., and to the Reindeer Lake area of Manitoba and Saskatchewan, where a large sulphide deposit is being drilled.

The Cyril Knight Prospecting Company.—This company had parties on Island lake, northern and eastern Manitoba, and on Rankin inlet on the west shore of Hudson bay, where assessment work was performed on four claims.

The Consolidated Mining and Smelting Company.—Prospecting was carried out by this company in the Bird River area of the Winnipeg mining district. In northern Manitoba, prospecting was more or less general, in areas closely adjoining the railways, but the number of stakings was below that of last year.

A number of claims were staked in the Lac du Bonnet and Rice Lake mining divisions of the Winnipeg mining district, and around Slate lake, and more or less generally throughout the gold areas along the Manigotagan and Wanipigow rivers. There was also some heavy staking in the early part of the year in the tin area around Bernic, Shatford, and Bird lakes, and later in the year, a few at West Hawk lake. About eighty claims were staked at East Braintree some seventy-five miles east of Winnipeg on a number of large sulphide dykes carrying some chalcopyrite.

There was greater activity in northern Saskatchewan than in the previous year. Heavy stakings were made at Forbes and Montgomery lakes and at lac La Ronge. The development of the lead-zinc deposits south of Pine point on Great Slave lake stimulated activities in the country tributary to the Mackenzie river, and a great increase in stakings was reported at Fort Smith.

CLAIMS RECORDED

The number of mining claims recorded by districts is given as follows:—

District	Jan. 1 to Dec. 31, 1929
The Pas mining district.....	1,972
Cold Lake mining district.....	601
Prince Albert mining district.....	1,041
Northwest Territories.....	469
Winnipeg mining district.....	2,185
Total.....	6,268 claims

PRODUCTION

The one producing property is that of the Central Manitoba Mines Limited at Long lake in the Rice Lake division of the Winnipeg mining district. This mine is about 100 miles northeast of the city of Winnipeg as the crow flies. It operated continuously throughout the year 1929, 58,810 tons of ore were hoisted and 54,674 tons treated in the cyanide mill, operating at a capacity of about 150 tons a day. Stopping was done at 125, 200, 250, and 375-foot levels; 51,365 feet of underground development work was done during the year, and 5,531 feet of holes drilled both underground and on the surface in exploration work.

MINES DEVELOPING

Hudson Bay Mining and Smelting Company.—This company displayed much activity throughout the year, 2,000 men were employed continuously and great progress was made in the construction of the concentrating plant, zinc refinery, crushing plant, power house, copper smelter, shaft house, and the various shops and other buildings. The main shaft, a five-compartment vertical shaft lined with steel, is now down to a depth of 650 feet; 106,000 tons of material of all kinds have been shipped in; 30,000 tons more remain to be shipped. The company expects to go into production early in 1931.

Sherritt-Gordon Mines, Limited.—These mines were active throughout the year. The main shaft, a five-compartment shaft inclined at an angle of 51

degrees, was sunk to a depth of 625 feet. Stations have been cut at the 250, 350, and 500-foot levels. Great progress has been made with the construction of the various mill buildings; 118 diamond drill holes have been put down to date totalling 41,614 feet, and the total length of shaft, drifting, cross-cutting and raising amounts to over 16,000 feet.

Mandy Mines Limited.—This mine is situated in The Pas mining district, about eighty miles north of The Pas, Manitoba. During 1929 development work was carried on continuously until early in December, when operations were suspended. The two-compartment shaft was put down to a depth of 1,025 feet. Drifting and cross-cutting was done on levels at 100-foot intervals. Total lateral work to date over 8,000 feet. Diamond drilling was done on the surface and underground on the tenth level. Thirty-five men were employed.

San Antonio Mines Limited.—This property was worked continuously throughout 1929, a force of twenty-five men being employed. The development work done in sinking, cross-cutting and drifting amounted to 2,788 feet. In working at the 725-foot level two well-defined veins were encountered. The results of the year's operations were very encouraging to the company. This property is in the Rice Lake mining division of the Winnipeg mining district at a distance of about 100 miles east of north of the city of Winnipeg.

Gem Lake Mines, Limited.—This mine was worked continuously through 1929. Development work in sinking, cross-cutting, drifting, slashing and station-cutting totalled 5,111 feet. Two veins have been cut on the 125, 250, 375, and 500-foot levels, carrying ore shoots averaging 3.5 feet wide. Results on this property to date have been encouraging. This mine is in the Rice Lake division of the Winnipeg mining district, about 40 miles southeast of the San Antonio.

Northern Lead Zinc Company Limited.—The properties of this company are located south of Pine point, Great Slave lake, N.W.T. Together with its affiliated prospecting company, the General Exploration Company, the Northern Lead Zinc Company Limited controls a total of 448 mineral claims in this area. A party of workmen was taken in to this property in March, 1929, and work has progressed continuously since. Sixty-nine test pits have been dug to date on four different areas to an average depth of fifteen feet; the average depth of boulder clay is given as from seven to nine feet. The ore occurs in sink holes in the Presqu'île dolomite. It is a high-grade mixture of galena and sphalerite. Sufficient work has not been done to establish the vertical thickness of the deposits, but it is believed that the area which will be found to be occupied by the deposits will be very considerable.

Jack Nutt Mines Limited.—Operations were carried out by this company throughout 1929 at Bernic lake, Lac du Bonnet mining division, Winnipeg mining district. A two-compartment shaft was sunk to a depth of 170 feet and four holes drilled on a pegmatite dyke containing some cassiterite. A radiore survey was made of claims at Bernic lake and at Rush lake.

Manitoba Tin Company, Limited.—This company sank a shaft to a depth of 100 feet on a pegmatite dyke at their properties on Shatford lake. About 300 feet of cross-cutting and drifting was done at the 100-foot level. Operations were suspended in November, 1929.

SURFACE EXPLORATION WORK

Many companies and syndicates confined their attention during the year to trenching and surface exploration work of their holdings, in the Winnipeg and The Pas mining districts in the province of Manitoba.

OPTIONS WORKED

The Consolidated Mining and Smelting Company optioned and drilled the Don Jon claim of Flintoba Mines Limited at Thompson lake. The Consolidated Mining and Smelting Company also optioned and drilled the Davidson Montgomery claims at Forbes lake. Late in 1929 this company took an option on the Lynx group of claims on Oxford lake and sent a party of eight men to this property to open up test pits for sampling purposes.

Ventures Limited optioned and put eighteen diamond drill holes down on the Matson Adair holdings at Hyres Island, Oxford Lake, early in 1929.

Towards the close of the year the Mandy Mines Limited optioned the Baker Patton holdings of the Callinan Flin Flon Mines Limited at Sourdough bay and did 4,000 feet of diamond drilling.

III

FORESTRY

REPORT OF THE DIRECTOR OF FORESTRY, E. H. FINLAYSON

In the year under review agreements were signed with the western provinces for the return of the natural resources, including the forests. This action will relieve the Forest Service of its former administrative functions with regard to the protection and management of forest lands. The change will enable it to concentrate on investigation, research, and experiment, and to give leadership to the provinces and the forest industries. In particular this Service will be in a position to avail itself of the additional opportunities which are presented for investigation into basic forest-protection problems, for silvicultural researches into the rates and conditions of growth of Canadian tree species, for forest-products research looking to the closer utilization of Canadian raw materials, and for the more intensive prosecution of the national inventory of forest resources now actively under way.

The forest fire situation in Canada during the year 1929 was one of the most severe ever experienced and might easily have been the most disastrous in our history but for the development in protection facilities which has taken place in recent years. The area most affected extended from western Ontario to the Pacific coast. Throughout that region snowfall during the two preceding winters had been very deficient. In addition the spring and summer of 1929 were characterized by almost complete lack of rain. This condition, combined with extended periods of high winds, created an unparalleled drought situation throughout Western Canada. The expenditure on fire fighting alone was almost \$1,250,000, the highest on record in the history of fire protection in Canada.

The following table, compiled by the Forest Service from returns made by the different forest authorities, gives in detail the figures of forest fires in Canada for the year 1929 as compared with the average for the five-year period 1925-29 inclusive.

Item	Year 1929	Average per year 1925-1929 inclusive
Total number of fires.....	6,685	5,146
Total area burned over (acres).....	6,030,749	2,319,074
Merchantable timber—		
Area burned (acres).....	674,226	376,223
Timber burned (M ft. B.M.	508,715	455,125
(cords).....	2,005,386	1,634,821
Estimated stumpage value.....	\$2,379,582	\$ 2,532,868
Young growth—		
Area burned (acres).....	1,023,111	531,836
Estimated value.....	\$2,004,759	\$ 1,013,925
Cut-over—		
Area burned (acres).....	340,225	172,161
Estimated value.....	285,569	\$ 130,002
Non-forested—		
Area burned (acres).....	4,128,901	1,275,283
Other property burned—		
Value.....	\$ 301,499	\$ 441,883
Actual cost of fire-fighting.....	\$1,239,345	\$ 630,624
Total gross damage and loss.....	\$6,210,754	\$ 4,749,302

In accordance with an undertaking made to the provinces at the national forest inventory conference in June, 1929, the Research Division of the Forest Service concentrated its work largely on the inauguration of rate-of-growth studies in the main forest regions of Eastern Canada. The usual research activities were, however, continued at the forest experiment stations at Petawawa, Lake Edward, and elsewhere. In addition, a new experiment station was instituted at the forest nursery at Indian Head, Saskatchewan, dealing largely with pathological problems of Western Canadian species. The Forest Products Laboratories, having become settled in their new sites, turned their activities to carrying out research programs the scope of which it has been possible to enlarge considerably by reason of increased staff and equipment.

NATIONAL INVENTORY OF FOREST RESOURCES

At the conference of the federal and provincial forest authorities held in Ottawa, June 25 to 27, 1929, it was decided to conduct a national inventory of forest resources. The provincial authorities administering forests undertook to carry on the work in their respective provinces, and the Dominion Forest Service to conduct the inventory in the Prairie Provinces and to co-operate with and assist the other provinces as far as means were available. It was also agreed that the Forest Service should act as a clearing-house for information regarding the existing forest resources and their depletion and increment, the provinces furnishing reports of surveys and investigations as completed. The completion of the inventory (of the accessible area, at least) in five years was set as an objective.

Pursuant to the scheme adopted by this conference the Forest Service immediately commenced the inventory in the three Prairie Provinces by detailing a forest officer in each to collect and compile all existing data, examine areas concerning which reliable information was lacking, and keep records of depletion due to cutting, fire, etc. In 1929 three stock-taking survey parties were placed in the field in Manitoba and one in Saskatchewan, and in 1930 there will also be one in each of these two provinces.

Each province has been divided into a number of districts based primarily on drainage areas, and for each of these districts separate reports are being compiled showing the classification of the area as to tenure (privately owned, leased, or unalienated), farm land, waste land, and non-productive or productive forest. The latter is subdivided into softwood, hardwood, and mixed types of merchantable timber and young growth. The areas of virgin forest and cut-over and burned-over land are also recorded. An estimate of the amount of timber of merchantable size suitable for lumber, pulpwood, ties, poles, posts, etc., of each species is being compiled. The annual cut for all purposes and the losses from fire, insects, and disease are being estimated as closely as possible.

As a result of the extensive forest surveys conducted in Manitoba during the last four years, the inventory in that province is well advanced and there is every prospect of completing it within the five years set, but in Saskatchewan and Alberta there are such large areas for which the information is very meagre or altogether lacking that this may not be the case.

Aerial photography has been of the greatest assistance in these inventories, especially when used in conjunction with ground surveys. Maps are prepared from the photographs which not only give accurate topographical details, but show the waste land, merchantable timber, and young growth of the various types. With experience, the interpretation of aerial photographs is becoming much more efficient and it is confidently expected that with additional research along the lines started it will be possible by this means, supplemented by a minimum of ground cruising, to determine, within a reasonable degree of accuracy, the extent of the forest resources over areas in which intensive ground surveys would entail large expenditures of time and money.

As part of its co-operation with the provincial services the Dominion Forest Service is conducting a series of surveys in each province to determine the kind and amount of natural reproduction which is taking place after cutting and fire, and the rate at which this young timber is growing.

Information being obtained through this inventory will make it possible to devise forest policies adapted to the varying forest conditions throughout Canada which will ensure to the forest industries continuous and economical production.

FIRES AND FIRE PROTECTION

All inspectorates report a very hazardous fire season.

In Manitoba the 1929 season, which lasted until the second week of October, was the longest ever experienced, and the worst since the inauguration of organized fire-fighting. The snowfall during the winter of 1928-9 was light; there was practically no spring rainfall, and the prolonged warm weather of the summer was accompanied by high winds. The loss was comparatively light, except on the east side of lake Winnipeg. Aerial co-operation was hindered somewhat by weather conditions and shortage of equipment, and static interfered to some extent with the use of the radio. Aircraft equipped with skis were used during the late winter and early spring. The total time of flying during April and May, 1929 (under winter conditions) was 176 hours; between May and November, inclusive, a total of 2 607 hours flying was done.

In Saskatchewan the hazard was intense from early spring until late autumn, being even worse than it was during the preceding season. The causes were practically the same as those operating in Manitoba, namely, the dry season of 1928 followed by a winter in which there was little or no precipitation, and a very warm, dry summer with unusually high winds. The fire loss within the national forests was greater than it had been during the two preceding seasons. In the fire-ranging districts, many fires were difficult of access, and could only with difficulty be prevented from spreading. Co-operation with the Civil Government Air Operations staff continued good; a total of 930 hours flying was done. Thirty-seven ground fires were extinguished during the late winter.

In Alberta the fire risk reached its climax in the summer, from the latter part of July on, when the situation in the southern forests of the east slope of the Rockies was fully as bad as those of 1910 and 1919; the first week of September, however, brought relief. In the Cooking Lake national forest and the southern part of the Edmonton fire-ranging district the hazard continued excessive from May till December. In the earlier part of the season, practically no risk was experienced during April. In the latter half of May rains in that part of the province south of the North Saskatchewan river relieved the hazard in southern Alberta, though in the northern part of the province a very acute risk developed. Rains in the middle of June alleviated the hazard except in the Cooking Lake forest and the southern part of the Edmonton fire-ranging district. With the exception of the region just named, the fire risk during the autumn was below the average. Intensive air patrol was necessary on account of the long period of high fire-hazard and the unfinished condition of the lookout units in the Crowsnest and Bow River forests. A total of 1,078 hours of flying was required—644 from the High River base and 434 from the Grande Prairie sub-base.

In British Columbia the fire-hazard was abnormally high. The absence of snowfall and the early spring contributed to this result, though the risk was not out of the ordinary until the last part of July. During the two months succeeding, the conditions were very bad, but after September returned to normal. The very great majority of the fires were of comparatively small extent but three which could not be controlled, in spite of the most strenuous work, were

the cause of a large proportion of the season's fire loss. The railways caused most fires, but these were all small in area and were soon extinguished. Lightning was the second greatest cause of fires, and incendiarism, which came third, is still the cause of a serious number of fires (almost ten per cent).

In the tables that follow are given the fire-statistics for the 1929 season:—

FIRE-HAZARD STUDIES

As in previous years, weather records were taken throughout the fire season at a number of selected stations in forest areas in the Prairie Provinces and the Railway Belt of British Columbia. The data obtained at these stations proved of material value to fire-protective organizations in the direction of fire patrols and suppression work.

In addition to the foregoing, fire-hazard research studies were continued at the Petawawa forest experiment station at Chalk River, Ontario, with the object of studying the degree of inflammability of forest-fire fuels (the materials on the forest floor in which fires start or spread) under varying conditions of moisture content. As a result of this work, it is now definitely known precisely what effect a given set of weather conditions has upon the inflammability of the forest fuels in the white pine and red pine type. The information thus obtained proved of great value in accurately determining the condition of inflammability of the forest each day and was useful in detailing the work of the men so that they would be immediately available in the event of a fire being reported. It was also used in determining the necessity of keeping men on duty on Sundays, the number of men necessary to send to a fire, and in posting warnings at the entrance to the forest reserve for the guidance of visitors in the use of fire.

The procedure consisted in establishing five zones of inflammability for mixed red and white pine forest ranging from nil to extreme, depending upon the moisture content of the fuels. The behaviour of fires in each zone was

identified. The rates of change of moisture content and consequently the inflammability, under varying conditions of rainfall, wind velocity, relative humidity of the air, temperature, and evaporation, were determined for the mixed red and white pine forest in the climatic area of the Petawawa forest experiment station.

IMPROVEMENTS

Hereunder is a list of the principal improvements made during the year:—

HAY AND GRAZING

In Manitoba the grazing situation improved somewhat, and the demand for hay was keen owing to the poor hay crop brought about by the dry weather. Practically all the hay meadows in the national forests were cut over.

In Saskatchewan there was a decided increase in the number of hay permits issued, the dry weather permitting the cutting of hay meadows usually flooded. Grazing, however, is decreasing owing to the fact that the farmers are more and more inclined to engage in mixed farming and raise their own forage crops. In Alberta more sheep but fewer cattle and horses were grazed.

In British Columbia weather conditions (in particular the small snowfall of the preceding winter, 1928-29) were unfavourable for grazing. With the idea of encouraging stockmen to use the higher ranges, several trails were constructed, and other improvements made.

TIMBER SALES AND PERMITS

In Manitoba five timber sales were carried on. The number of timber permits was slightly smaller and practically all of them were in the Riding Mountain, Duck Mountain, and Porcupine forests.

In Saskatchewan there was a slight increase in timber sales and permits. Thirty-two new sales (twenty-six "Supervisor's," five "Inspector's," and one "Director's") were awarded. There was a brisk demand for timber permits, especially on the prairie reserves. Very little pulpwood was cut. Owing to the dry season, great care was required in supervising brush-burning operations but practically all the brush was burned.

In Alberta ten new sales were awarded during the year and thirteen sales were closed out. The total cut was slightly less than last year's total, but is above the five-year average. The number of permits issued was 673. There was an increase in the quantities of fence-posts, fence-rails, poles and fuelwood. The cut of sawlogs was stationary and there was a decrease in the cut of mining timber and thinnings.

In British Columbia the season was very active in regard to timber sales, nineteen new sales being awarded. The greatest demand was for poles and piling; the demand for sawlogs was small and only a few ties were cut. Sale conditions were well complied with.

REFORESTATION

In Manitoba 47,500 trees were set out on the Riding Mountain forest, but no seeding was done. Sprinkling systems worked satisfactorily at all the nurseries and a total of 2,429,400 young trees is on hand.

In Saskatchewan 46,000 trees (14,000 white spruce and 32,000 jack pine) were set out on the Dundurn, Nisbet-Pines, and Big River forests. The excessive mortality of jack pine planted in the autumn of 1928 showed that fall planting of jack pine was not a success. In the nurseries growth was hindered by dry weather. The number of seedlings on hand is 5,435,397, and the number of transplants 749,672. A detailed nursery cost system was introduced in 1928, and it is found that the cost of seedlings is on a par with similar nursery stock in the United States, but the cost of transplants is excessive.

In Alberta 50 acres of spruce and 25 acres of lodgepole pine were planted in the Cooking Lake forest. There has been much damage from rabbits and a rabbit-proof fence has been erected around the area planted to pine. Older plantations are doing well. For planting in 1930 there are on hand 180,000 spruce and pine seedlings and 10,000 transplants.

RECREATION

In Manitoba the number of visitors at the summer resorts in the national forests showed a marked increase; the estimated daily total number of visitors at all these resorts amounted to 1,400. Improvements made include the clearing of four acres of land at Benito Beach and two acres at Kamsack Beach, the construction of a promenade along the lake at the latter resort, and the laying out of two additional tennis courts, a pier, and a bath-house. At the Clark Beach (Riding Mountain) resort a nine-hole golf course was constructed and throughout all the summer resorts much road-improvement work was done.

In Saskatchewan the resorts continue to be popular, especially at Fish lake (Moose Mountain), where fifty additional lots were laid out in the Sandy Bay subdivision. Fishing permits issued in this forest showed a substantial increase in number.

In Alberta the Elkwater Lake resort, the only one in this inspectorate, has a steadily increasing number of visitors, and the camping grounds in the mountains continue popular in summer and autumn.

In British Columbia both the Paul Lake and the Fish Lake resorts continue popular, though no great demand has been experienced for camp or cottage lots. Attention is being given to camping sites along the automobile highways in the national forests. The ditch connecting Walloper lake and Fish lake has been found useful in providing spawning grounds for the trout and raising the level of Fish lake.

SURVEYS

In Manitoba the surveys of pulpwood resources were continued by three parties, two in the Nelson River drainage area and one in the Saskatchewan River drainage area. A total of about 4,262,000 acres was covered, of which 1,562,000 acres were in the Nelson area and 2,700,000 acres in the Saskatchewan area.

In Saskatchewan three 4-man crews were engaged in an inventory survey in the Pasquia forest. Though their work was interrupted by fire, they succeeded in covering 128,000 acres. During the winter a 2-man party cruised 9,406 acres in the Fort à la Corne forest.

In Saskatchewan, on account of heavy demands from prospective settlers for the opening of lands in national forests and proposed additions thereto,

examinations were made of these lands and 66½ sections were withdrawn from the forests; five townships were also withdrawn as the result of examination by officers of the Department.

MANITOBA FOREST INVENTORY

Preliminary work was done in the matter of making a forest inventory of Manitoba, consisting of a general tour of the settled portions of the province, preparation of a plan for future work, special subdivision of the province into districts, compilation of the 1927 cruise of the pulpwood area and a set of maps of the 1928 and 1929 fires, and compilation of data on land tenure. The Bureau of Statistics co-operated in the preparation of a list of sawmills.

SEED COLLECTION AND EXTRACTION

In Manitoba there was a heavy crop of Manitoba maple seed, and 3,058 pounds were collected at Dauphin and sent to Indian Head, Saskatchewan, for extraction.

In Saskatchewan 128 bushels of jack pine cones and 125 bushels of white spruce cones were collected, yielding, respectively, 58 and 86 pounds of seed. The cost of the jack pine seed was higher than usual, but the white spruce seed cost little more than half that extracted in 1927. Ten pounds of balsam fir seed were also procured.

In Alberta the crop of spruce and balsam fir cones was very poor and collection was not feasible; 200 pounds of lodgepole pine seed were extracted from cones collected in previous years.

The demand for British Columbia seed continued, and two and one-quarter tons of seed were sent to the British Forestry Commission. Large orders from the Irish Free State, New Zealand, and Australia were also filled, and Norway, Sweden, Finland, Denmark, Spain, and Russia were sent small lots. Although the crop of coast Douglas fir seed was a failure and that of lowland fir was not satisfactory, the crops of other varieties of seed were some of the best on record, especially Sitka spruce, the season's yield of this seed being the best since this Service started the work of seed collecting. All picking was done by contract. The total quantity of seed extracted amounted to five and a quarter tons—the yield of about thirteen carloads of cones. The quality of seed was unusually good, as high as 96 per cent germination being obtained in one shipment of yellow pine seed.

TREE PLANTING ON PRAIRIE FARMS

Exceptional weather conditions owing to drought, heat, and extensive wind-storms made the season of 1929 the most unfavourable experienced by the Tree Planting Division since the beginning of its work. Following upon a winter of light snowfall, conditions were fairly good during the spring, but during the remainder of the season there was an almost complete lack of precipitation. Abnormal temperatures in January and February led to an unusual amount of winter-killing; of all the species ash was the least affected. Lighter soils suffered less than the heavier clay soils. Established evergreens came through in good condition and broad-leaved rooted stock sustained little loss; cutting stock, however, suffered very heavily. Of the plantations two years old and over, 81½ per cent were rated good, 15½ per cent fair, and only 3 per cent poor. Owing to the drought the growth was somewhat less than usual. Field shelter-belts are increasing in number, and their benefits are being perceived. In at least one case reported a field shelter-belt about four feet high saved the crop on the sheltered side when the crop on the exposed side was a complete failure. Observations of mulching show this practice faulty. Mulching

increases the fire risk, but a cultivated strip acts as a fireguard and also adds to the area from which trees can draw moisture in case of drought. Greater interest is everywhere reported in ornamental trees, shrubs, flowers, lawns, and fruit trees. A total of 8,673,650 broad-leaved seedlings (approximately half from each of the Indian Head and Sutherland nurseries) was sent out to 6,486 applicants, and 138,700 transplants of pine and spruce were sent to 966 applicants, in addition to which 118,000 trees were sent to the Spruce Woods forest for planting there. The broad-leaved nursery stock is smaller than usual but well rooted. The evergreen seed-beds have come through very satisfactorily owing to artificial watering.

Much attention was given to the research work at the Indian Head station. A start was made in obtaining complete plotting and measurement records in all the permanent plantations at Indian Head. Eighteen plantations whose areas totalled 31.72 acres were surveyed, every tree being measured and plotted. Some of these were also marked for thinning. Observations were made in a number of cases of the results of mixing different species. A mixture of ash and Scotch pine proved almost ideal under the conditions obtaining at the nursery. Mixtures of Manitoba maple with other species were generally beneficial, though in some cases the maple did harm by shading and mechanical damage. A mixture of caragana and white spruce has proved detrimental to the spruce, and jack pine has also suffered badly from its mixture with caragana. In the mixtures of caragana with lodgepole pine and with Colorado spruce, damage done by the caragana has not been so evident.

A number of "variety" plots were also measured for diameter and height, and some of them were thinned. Many height measurements were made in both plantations and "variety" plots. The trial of exotics was continued; in the nursery rows there are now 1,772 plants of 71 species of these and the transplant beds include 941 plants of 36 species. Studies of the effect on grain crops of a field-shelter were carried out at a farm in the vicinity of Indian Head. In the case of oats and barley very striking benefits were noted to a distance of 65 or 75 feet from the shelterbelt, and in that of wheat to about the same distance.

The study of poplar canker was continued. Two types of this disease were found, one of which injures the young cuttings in the nursery, the other appearing on older plantations. Clean cuttings planted in clean ground were found to give trees free from the disease. A fungus was discovered which seems to be the cause of the disease, which has been proved to live over winter in the cuttings and to continue growth next spring after planting. In a typical lot of cuttings taken from the ordinary run of stock sent out from the nursery, over 40 per cent failed to survive. Ocular inspection is sufficient to select clean cuttings, which must be planted in clean ground. The other form of canker—that which affects the adult trees—is perpetuated by a fungus which is comparatively well known, but the fungus which originates the disease is not yet known. Further investigation of this disease is being carried on. A study of "damping off" is being carried on in coniferous seed-beds.

A mimeographed circular describing a simple and practical method of preservative treatment for fence-posts was issued in response to many inquiries received from the farmers throughout the Prairie Provinces, great interest having been aroused from the fact that the first lot of Russian poplar posts creosoted in 1916 are now, after thirteen seasons in the ground, apparently in as good condition as when originally set out.

Tests of apples and plums grown under the protection of shelter-belts were continued at Indian Head, and a variety of gooseberry similar to the English gooseberry and much larger and of better quality than the kinds usually grown on the prairies holds out great promise. Tests of apples and plums are also being carried on at Sutherland.

FOREST PRODUCTS LABORATORIES OF CANADA

Since the reorganization of the laboratories at Ottawa and Montreal has been completed and these laboratories have become well established in their new quarters, all three laboratories have made satisfactory progress. The past year was one of exceptional activity. Increasing interest in the work of the laboratories has been manifested by the wood-using industries, a fact which provides an important incentive to the staffs of the laboratories.

OTTAWA LABORATORY

The Ottawa Laboratory is now organized under the divisions of wood preservation, timber mechanics, timber physics, timber pathology, wood utilization, lumber seasoning, markets and exhibits, and office administration.

Division of Wood Preservation.—Tests were begun of a new preservative known as zinc-meta-arsenite. Eleven hundred ties were provided by the Canadian National Railways and treated by the Laboratory, and are being installed in the track, where they will be kept under observation; tests were also made as to permanency of this preservative under leaching conditions, corrosive effect on metals, and toxicity to fungi. The Canadian Pacific Railway provided 1,220 ties, and tests made on these, after being air-seasoned and creosoted, proved that incising prior to air-seasoning slightly reduces checking in ties seasoned from four to five months but has no appreciable effect on the rate of air-seasoning or on the absorption of preservative as compared with ties incised after air-seasoning. Incidentally to this work it was found that yellow birch ties should be treated separately from maple and beech ties, though ties of these latter two species may be seasoned together. Studies in the distribution, penetration, and permanency in wood of dinitrophenol (a constituent of Wolman salts), a preservative much used in several countries, are in progress, as is also work on the use of sodium chloride (common salt) as a wood preservative under certain conditions. Work on the protection of timber from marine borers is still being carried on.

Division of Timber Mechanics.—A new project being taken up in this division is the testing of glues for the purpose of developing glue standards. Further study of the strength of wooden containers is being carried on, and a survey of packing methods and materials used by leading manufacturers of western and southwestern Ontario has been completed. A study of the relation between rate of growth and crushing strength and between density and crushing strength was carried on. This division and the division of timber pathology are co-operating in investigation of the strength of jack pine as influenced by *Trametes Pini* and a second fungus that causes red stain in jack pine. A series of tests (4,326 in all) was carried on with Eastern cedar, red pine, and jack pine in order to ascertain the suitability of the pines for use as telephone poles. Tests on clear specimens of Canadian woods and on the nail-holding power of Canadian woods were continued. Strength tests of treated and untreated Douglas fir beams showed that though, generally speaking, some decrease in strength was shown after treatment the decrease was not sufficient to limit their usefulness or serviceability from a commercial standpoint. A number of minor investigations were made. A total of 15,430 tests was made during the year under various projects, and 2,159 tests in response to inquiries from wood-using industries.

Division of Lumber Seasoning.—Kiln-drying tests on white pine point to the development of a method of avoiding brown-stain in drying. Plans were drawn up for a lumber-seasoning survey in lumber-manufacturing and wood-

working plants in Quebec and the Maritime Provinces. Investigation of the absorption of moisture in rail transportation of kiln-dried stock from British Columbia to Eastern Canada was made in co-operation with the Vancouver laboratory.

Division of Timber Physics.—Several studies of timber flotation were carried on. Reports were made to the Woodlands Section of the Pulp and Paper Association, at their request, on the Laboratory's investigations regarding the decrease of floatability in logs which had been soaked in water in a tank for almost a year, and on the effect of agitation on the rate of absorption of water by logs. The effect of water temperatures on the sinkage of wood in fresh water was investigated, the result being that no apparent difference was found in the rate of sinkage of logs where the water remains either cold or warm, but that the rate of sinkage seems to be faster in logs which are subject to varying water temperatures. The collection of microscopic preparations of Canadian woods was extended, and many wood identifications made. Microscopic preparations of Canadian woods were sent to three Canadian universities and one technical school. An investigation of electrical resistance in wood was initiated, and a number of minor investigations carried out.

Division of Timber Pathology.—Blue-stain in lumber, particularly white pine, was investigated in several aspects. A study of the general conditions under which blue-stain occurs and of means of preventing it was made, and a short circular published on this subject. A systematic study of blue-stain fungi was begun and tests made of twelve selected toxic chemicals to determine which of them will control blue-stain. Brown-heart in birch is also being investigated. In response to a request, mora, a heavy South American hardwood which has been suggested for use as railway ties, was tested and found apparently durable. The reference collection of pathological material was extended and study of the development of red-stain in jack pine ties under service conditions was continued.

Division of Wood Utilization.—This division was engaged on another aspect of the log-flotation question, namely, the effect of seasoning on the floatability of logs, a report on which was made at the 1930 meeting of the Woodlands Section of the Pulp and Paper Association. An official report on the relationship between rate of growth and density in spruce was drafted. Plans were prepared for a systematic study of sawmill waste in eastern Canada, and co-operation was given to the Forest Protection division of the Forest Service in the study of the factors affecting the inflammability of forest fuels.

Division of Markets and Exhibits.—The demand for sets of specimens of the principal commercial woods of Canada continues, and ninety-six sets were sent out during the year. Exhibits were prepared for the National Museum at Ottawa, for nineteen Canadian trade commissioners stationed at various points all over the world, for the Imperial Institute at London, England, and for the International Exhibition at Antwerp, Belgium. The laboratories also participated in exhibits at the Toronto Builders Exhibition and the Quebec Provincial Exhibition of Natural Resources, and had displays in the Royal York Hotel, Toronto, and the Buffalo and Detroit offices of the Department of Immigration and Colonization. A number of magazine articles were written and tests made by members of the staff relating to the work of the Laboratories.

VANCOUVER LABORATORY

Requests for technical information increased by ten per cent; several of these were important and led to special investigations.

Division of Timber Mechanics.—Tests to determine the effects of incising and creosoting on the strength of Douglas fir ties were completed and a report made. Work was continued on the testing of clear specimens of Western woods, the effect of variable moisture contents on the strength of wood, the deterioration of black cottonwood logs in fresh-water storage, and the retention of nails and screws in wood. A request was received from the Fisheries Experiment Station for further co-operation in the testing of glues made from fish waste. Many custom tests of various construction materials were also carried out.

Division of Timber Products.—An investigation of the absorption of moisture by timber shipped, respectively, by water and by rail was made co-operatively with the Ottawa Laboratory and the Forest Products Research Laboratory at Princes Risborough, England. These indicate that kiln-dried lumber shipped by rail will reach its destination in satisfactory condition, but such material will for some uses require re-conditioning on arrival in England. Air-seasoning studies on Engelmann spruce were made at mills in the Interior region. Efficient drying schedules were developed for the seasoning of Western red cedar, yellow cypress, and alder. Studies of the shrinkage of commercial sizes of cedar were made and as a result of a study of the "cupping" and loosened knots in Engelmann spruce definite recommendations were made to a co-operating mill with a view to improving their kiln practice. The effect on durability and serviceability of various temperatures in drying shingles was studied. Eighty-nine per cent of coast mills having dry kilns were included in a survey made to determine variation in moisture content of kiln-dried lumber at the time of shipment and the effect of moisture content on machining. A series of studies at four coast mills shows that considerable improvement has been made in kiln-drying practice since the first studies in 1925. Twenty-one students attended the third annual six-day kiln-drying course. A marked improvement in seasoning practice was reported by the British Columbia Lumber and Shingle Manufacturers' Association. Loosened grain in kiln-dried Douglas fir, "collapse" in kiln-dried shingles, and the effect of different methods of lumber-piling on the rate and uniformity of drying were continued, and a study made of the effect on the yield of seed of different combinations of temperature and humidity in extracting lodgepole pine seeds. Mill-waste studies have shown that 67 per cent of the volume of the log is recovered as lumber. Studies in log waste were also commenced. Studies of the effect of kiln-drying on the sterilization of lumber and the effect of purple stain on the properties of Douglas fir and Western red cedar were begun, and a study of the development of stain in overseas shipments was continued.

Several articles by laboratory officers were published in lumber and engineering journals, and twenty-five lectures on technical subjects were given to lumbermen's organizations and educational institutions.

In co-operation with the British Columbia Lumber and Shingle Manufacturers' Association, Limited, an exhibit of British Columbia forest products was prepared for the Antwerp Exhibition, and, in co-operation with the British Columbia Forest Service, material for an exhibit of British Columbia products was prepared for the Crystal Palace, London, England. Exhibits were also made at the Vancouver Exhibition (in co-operation with the Canadian Forestry Association), at the West Coast Lumbermen's Association at Tacoma, Washington, and in a number of other cases.

PULP AND PAPER LABORATORY (MONTREAL)

Very satisfactory progress has been made by the laboratories during the year in formulating a program of work, in obtaining competent personnel to engineer such a program, and in getting various projects well organized. The program of work and activities of the Laboratory are under the general adminis-

tration of a committee composed of representatives of the Forest Service and of the pulp and paper industry. The new program was developed in close co-operation with the industry through several committees of the Technical Section of the Pulp and Paper Association. Practically all the former projects were included, and a number of progress reports from these were included in Volume 2 of "Research Notes." A manual of pulp testing is being compiled for the use of laboratory workers. Investigative work is being done on the adaptation of alkaline pulps to the manufacture of artificial silk, as a result of which it now seems that it will be possible to produce alkaline pulps suitable in all ways for artificial silk production. The manufacture of sulphite pulp is being studied with special reference to the quality of pulp made from different species and by different processes, full tests being made of the products. Investigation is being made of the qualities of pulp as they affect the qualities of the paper made from it; this investigation consists largely of the development of new methods of testing and the substantiation of such methods. Chemical pulping depends on the action of certain reagents in dissolving the non-cellulose materials of the wood and the laboratory has undertaken a thorough study of the factors and conditions covering the penetration of cooking liquors into wood, for instance, the conditions which bring about the gradual weakening of the cooking liquor. In connection with the study of the whole question of bleaching, apparatus has been designed and constructed for the correct estimation of hydrogen-ion concentration in oxidizing solutions, and of the circulation of bleaching liquor through pulp. A systematic study of the ground-wood process is being undertaken under the headings: (1) Definition of ground-wood quality, (2) Definition of stone quality and stone surface, (3) Study of the factors of operation, (4) Study of machine design, auxiliary appliances, and related methods of procedure.

SILVICULTURAL RESEARCH

The first field-work in connection with the Canada-wide study of the rate of growth of forests in their various conditions was commenced this year. It is proposed to determine the average current rate of growth of each tree species in each age-class and in each timber type. Particular attention will be given to young timber, the potential forests. Four field parties of eight men each commenced work on this problem in May and continued until October. These parties were located in Nova Scotia, New Brunswick, Quebec, and Ontario. By the end of the fiscal year the data were compiled and summarized in preparation for the interim report.

An additional research party in Quebec was engaged in remeasuring the numerous permanent sample plots that have been established at the several stations—Lac Tremblant, Lake Edward, and Lake Kenogami—from time to time during the past ten years. The results of the first remeasurement, and, in some instances, of the second remeasurement are now available.

Dual activities, research and administration, were conducted at the Petawawa experiment station. Research was concentrated on remeasurement of sample plots in connection with several experimental cutting areas, and with surveying an area for a demonstration woodlot to be managed on a working-plan basis. Considerable advancement has been made in the development of a fire-weather station at Petawawa. The season being exceptionally dry, the collection of most interesting and valuable data was made possible. It was a busy season for the administrative staff. Over a dozen fires started, but prompt action and continuous fighting kept them under control so that loss of timber was very slight. The organization, from detection to suppression, was strong; otherwise much valuable timber and many investigative projects would have been destroyed.

Further progress has been made with the study of type classification based on the distribution and association of floristic species of ground cover. The information collected by a field party in Alberta during the summer of 1929 indicates that some four or five definite types or sites can be recognized by the grouping of certain characteristic floral species.

The bulletin, *Form-class Volume Tables*, now issued, presents in concise form information invaluable to those, from coast to coast, concerned with forest products.

PUBLICITY

As it was felt that the annual forest-week campaign which had been staged each spring for several years had outlived its usefulness, this method of fire prevention was discontinued in 1929. The newspaper-advertising campaign, previously an integral part of the forest-week campaign, was however, maintained as a separate venture and showed uniform success. Advertisements appeared under this plan in all dailies, weeklies, farm periodicals, and foreign-language and financial papers over the period from May to September.

In June, July, and August, four different lecturers were in the field, visiting boys' and girls' vacation camps. In all 32 camps and 3,013 campers were visited.

A representative of the Service again supervised the forestry exhibits at the Class A fairs in Western Canada. Following the success of the log cabins erected by this Service on the fair grounds at Calgary and Edmonton, similar structures were erected on the fair grounds at Saskatoon and Brandon; the latter is a particularly fine example of log building, and has come in for considerable commendation and admiration. In addition to these exhibits at Class A fairs, booths were established by local officers at twelve of the smaller fairs and exhibitions in the Prairie Provinces and British Columbia.

The course of forestry lectures at Dauphin normal school was carried on as usual. Routine publicity materials—calendars, posters, pamphlets, novelties for distribution at fairs, and similar items—were designed and distributed throughout the year. The district inspectors report a steadily increasing interest in forestry problems, stimulated by the publicity work of the Service.

PUBLICATIONS

The most important publication issued during the year was the book of *Form-class Volume Tables* for red, white, and black spruce; red, white, jack and lodgepole pine; and balsam fir. This embodies the results of several years' work by the Research division of the Service. These tables will prove of great service to foresters and executives of large lumbering and pulp companies in computing the quantities of wood to be obtained from different stands of timber, and a large demand has already been experienced for them. The format is designed to make the book of service in the field as well as in the office. The book includes 170 volume tables showing the volume of wood to be obtained from trees of specified diameters and heights, and a number of other tables of value to foresters and timber estimators. Two new circulars were issued, namely, No. 27, *Creosote Treatment of Douglas Fir*, and No. 28, *Stain and Decay in Lumber-seasoning Yards*. Forestry Topic No. 6, *The Christmas Tree Trade in Canada*, was also issued during the year.

REVENUE

The revenue from all sources during the fiscal year showed a net decrease of \$33,591.28. With the exception of the fiscal year 1926-7, the revenue was

less than that of any year in the five-year period 1924-5 to 1928-9 and about \$18,000 below the average. The decrease was due mainly to lessened receipts of \$24,170.44 in timber sales and \$10,298.51 in miscellaneous receipts.

The decrease in timber-sale revenue is due mainly to the drop in receipts from the Pasquia forest, Saskatchewan, which amounts to \$36,596.80. Although the number of active sales was greater than the previous year, "Supervisor's" sales predominated, and, while this class of sale evidently fills a long-felt want, the volume of timber thus sold was below that included in "District Office" or "Head Office" sales of previous years, as partly indicated by the decrease in revenue. A substantial increase in the revenue from timber sales in the Big River forest, Saskatchewan, somewhat offsets the net decrease in Saskatchewan. Active timber sales show an increase of 16, with "Supervisor's" sales predominating.

The revenues from fishing and nursery stock show slight increases and that from tree seed is increased by \$4,936.16. Grazing fell off somewhat in Alberta, but shows increases in the other provinces, leaving a net decrease of \$689.01. Owing to the continued dry weather the demand for hay was unusually heavy, resulting in an increase of \$1,009.17. The increased demand for summer-resort privileges is also indicated in the increase of \$1,005.95 in surface rentals.

The kinds and total quantities of timber authorized to be cut from all reserves, the revenue of which is shown under the heading of "Timber Permits" in the statement of revenue, were as follows:—

Fuel-wood (cords).....	25,161
Fence posts, rails, and piling (number).....	338,070
Fence posts, rails, and piling (linear feet).....	15,060
Telephone poles (linear feet).....	1,670
Railway ties (number).....	770,201
Saw-timber (feet board measure).....	7,568,961
Mining timber (linear feet).....	498,760
Mining ties (number).....	500
Building logs (number).....	21,287
Building logs (linear feet).....	131,723
Miscellaneous (cords).....	1,666
Miscellaneous (number).....	215

Sixty-two new timber sales were awarded during the fiscal year. The dues payable amounted to \$99,050.26, and \$110,519.19 including arrears was collected.

The kinds and amounts of material cut and scaled on national forests in connection with timber sales are shown in the following statement:—

Number of active sales.....	166
Sawlogs (feet board measure).....	21,804,842
Mine timber—	
Lagging (linear feet).....	115,627
Other kinds (linear feet).....	718,016
Railway ties hewn (number).....	29,014
Telephone poles (linear feet).....	887,487
Fence-posts, rails, and droppers (number).....	18,683
Fuel-wood (cords).....	1,364½
Pulpwood (cords).....	1,105
Boxwood (cords).....	3,905
Piling (linear feet).....	24,767
Mine props (feet board measure).....	477,216
Mine ties (number).....	8,395

IV

NATIONAL PARKS OF CANADA

REPORT OF THE COMMISSIONER, J. B. HARKIN

National Parks

GENERAL

The year 1929-30 was one of activity and expansion in the work of the National Parks of Canada. Two new areas were investigated and added to the national parks system. The first of these included twenty-nine island reservations in the Georgian Bay district of Ontario. Some years ago officers of the National Parks Branch had pointed out the rapidity with which this beautiful region was being taken up by summer residents, with the result that there would soon be no places to which the general public could have free access for camping, bathing, or picnicking. An examination of unalienated islands, title to which still remained in the hands of the Department of Indian Affairs in trusteeship for the Ojibway tribe, was made by National Parks officers. Later by arrangement with the Department of Indian Affairs, a number of suitable islands were reserved, and last year twenty-nine were acquired and set aside as the Georgian Bay Islands park. Beausoleil island, the largest of the group—in fact the only remaining large island not taken up in the entire region—is well suited to become a public resort. It covers nearly five square miles and presents a good example of the characteristic scenery of this picturesque part of Ontario. Beautiful groves and bathing beaches of white sand make it attractive for outdoor recreation while its plant and bird life are varied and interesting.

Beausoleil island, too, played a part in that tragic drama which resulted in the annihilation of the great Huron Confederation at the hands of the Iroquois. After their crushing defeat at Fort Ste. Marie II, a few Hurons, Jesuit clergy, and French soldiers are said to have taken refuge from their persecutors on this island. Ruins of fireplaces and piles of debris which appear to indicate a line of fortifications laid out on military principles are still to be seen and lend support to the belief. Others believe that the ruins are of Ojibway origin, and date back to a period one hundred years later than the downfall of the Hurons when the Ojibways came down from the north and occupied the island. The word "Beausoleil" is a French translation of the Indian name "Chi-kon-de-kiara," meaning "land-seen-in-the-beautiful-light-of-distance," or more freely "land-of-the-beautiful-sun." This charming designation may have owed its origin to the wonderful sunrises and sunsets for which Georgian bay is famous.

Another new park region of interest is that recently set aside covering the Riding mountain in Manitoba. It consists of 1,148.04 square miles of rolling woodland country dotted with beautiful lakes, of which Clear lake, already a resort, is the best known. The new park extends somewhat over fifty miles from east to west, and from twelve to twenty-four miles from north to south. It lies southwest of lake Dauphin and approximately 120 miles north of the international boundary. The eastern portion is broken, hilly country, forming part of the well-known Riding Mountain escarpment. The terrain is cut by deep gorges and covered with dense poplar, spruce and jack-pine forests which will provide opportunities for forest research and nature study in addition to the recreational attractions. On the east and north the escarpment rises abruptly

from the plains. To the south and west the terrain extends in a wide plateau broken by rolling hills. The park is also a natural home for big game and contains one of the largest herds of wild elk on the continent. Moose, deer, bear, and smaller animals are found in numbers, while its ponds and lakes supply a resting and feeding place for thousands of wild birds. Surveys for the construction of a highway to Clear lake were undertaken last autumn and development work will be prosecuted as soon as the season opens.

TRAVEL TO THE PARKS

The present year marks the eighteenth since the creation of the National Parks Branch. In that time astonishing developments have taken place. The number of national parks has been increased from seven to eighteen and the total area from 4,019.5 square miles to over 12,000 square miles. In every part of the Dominion the importance of national parks is appreciated and there is apparent a growing pride in these great national possessions. This interest has been reflected in the rapid growth of travel to the parks, which are no longer regions visited by the wealthy few, but are attracting the multitude.

VISITORS TO NATIONAL PARKS

The number of visitors entering the national parks last year was the largest yet recorded. The total reached 559,329, as compared with 488,721 in the previous year. Totals by parks for the two years show decreases and increases as follows:—

Park	1929-30	1928-29
Banff.....	217,781	236,801
Buffalo.....	18,853	18,454
Elk Island.....	22,611	18,968
Fort Anne.....	18,000	16,000
Glacier.....	1,000	1,000
Jasper.....	15,458	14,000
Kootenay.....	51,772	33,238
Nemiskam.....	100	50
Point Pelee.....	83,200	50,100
Prince Albert.....	10,131	5,118
Revelstoke.....	8,000	8,800
St. Lawrence Islands.....	20,000	18,000
Vidal's Point.....	17,400	15,050
Waterton Lakes.....	48,592	26,002
Yoho.....	26,431	27,140
	559,329	488,721

Increase 70,608.

It will be noted that the largest increase occurred in the smaller parks, Waterton Lakes park showing a growth of nearly 90 per cent. Prince Albert park practically doubled the total of the previous year, while Kootenay park also showed a big increase. The business depression undoubtedly affected long-distance travel to Banff, particularly during the latter part of the summer, a decrease which was, however, partly made up by the increase in motor travel. The total number of cars using the Banff-Windermere and Kicking Horse highways was 98,482, an increase of 5,604 over the previous year. This increase is very gratifying and shows that these roads are fulfilling the purpose for which they were constructed—to act as through routes across the Rockies between the prairies and the coast, and as a means of bringing in foreign tourists to Canada.

REVISION OF PARK BOUNDARIES

The decision to transfer the natural resources to the western provinces led to a revision of the boundaries of the parks on the eastern slope of the Rockies. While the boundaries of these parks have been extended from time to time in the past, such extensions have always been considered as provisional. With the passing of all Crown lands, with the exception of national parks, to the provinces the desirability of fixing permanent boundaries became obvious.

During 1927 Mr. R. W. Cautley, D.L.S., was accordingly instructed by the minister to investigate the eastern areas of Banff and Jasper national parks and make recommendations for the guidance of the Government. Associated with Mr. Cautley was Mr. L. C. Charlesworth, Chairman of the Irrigation Council of Alberta, who was appointed the official representative of that province.

The report submitted strongly recommended, for the facilitation of both forest and game protection, that heights of lands as opposed to streams should be taken as boundaries. It pointed out that the valleys form the natural routes of travel both for game and visitors and that to have a closed area on one side of a stream and an open one on the other would lead to confusion and annoyance as well as danger to park game. The exclusion of certain areas possessing natural resources was recommended, including the Kananaskis and Spray watershed areas, the Ghost River area, the Red River watershed, the northerly portion of Rocky Mountains park, and the Brulé and Rock Lake areas which are believed to contain extensive coal deposits. With the exclusion of the areas recommended in the report, Rocky Mountains, or Banff, national park will be reduced in area from 3,961.50 square miles to 2,585 square miles, and Jasper national park from 4,635 square miles to 4,200 square miles.

PRESERVATION OF WILD LIFE

It is now eighteen years since the national parks were made game sanctuaries, through the establishment of an adequate system of game patrols and enforcement of the regulations. The results attained have been most gratifying. Native species have re-established their numbers to such an extent that the parks are more and more becoming the wild life reservoirs of the country.

Restocking.—In the past two or three years provincial governments have been drawing on the parks to replenish depleted game areas in other parts of the country. Two regions in the southern part of British Columbia have been stocked with Rocky Mountain sheep and an additional area between the Okanagan and Kettle valleys with elk. During the past year the British Columbia Government took up with the Department of the Interior the question of restocking the Queen Charlotte islands with elk. Authority was granted to furnish them with a small herd from the Buffalo park at Wainwright. The animals were cut out of the main herd—which now numbers 600—early in the spring, corralled until safe to handle, and then placed in specially constructed crates. Through the co-operation of the Canadian National Railways a special baggage car was provided which was attached to the regular passenger train for Prince Rupert and went through express to that port. Here the elk were transferred to a boat sailing to the Queen Charlotte islands. No loss or injury was sustained in transit and according to report the animals are settling down and adapting themselves successfully to their new surroundings.

Scientific and Educational Shipments.—Shipments for scientific and educational purposes were also made to various parts of the world. Two female buffalo were shipped to the Zoological Gardens of the city of Johannesburg, South Africa, and arrived in good condition after their long journey. A pair of beaver and a buffalo cow were presented to the Royal Zoological Society of Antwerp, Belgium. One male and two female buffalo were forwarded to the

Zoological Society of the city of Adelaide, Australia; two male buffalo and a pair of beaver to the Zoological Gardens at Auckland, New Zealand; and a pair of Rocky Mountain sheep to the Zoological Gardens, London, England. The Division of Animal Husbandry, United States Department of Agriculture, at Matanuska, Alaska, applied for one male and three female yak for experimental purposes in connection with the experimental farm there, and these animals were shipped in the autumn. A Rocky Mountain ram was presented to the Edmonton Exhibition Association, and one pair of sheep and a male elk to the city park authorities of Fort William, Ont. Two female buffalo and a pair of elk from Buffalo park were also donated to Stanley park, Vancouver, B.C. The male elk died shortly after arrival and an additional male was accordingly sent. A pair of Rocky Mountain goat was forwarded to the Zoological Gardens, Victoria, B.C. The corralling and shipping of such large wild animals, as most of the above, involves a good many difficulties, but it is gratifying to know that nearly all the animals reached their destination in good condition and are reported to be doing well.

Government Buffalo Herds.—The Government buffalo herds are in a very thriving condition. Nearly all problems in connection with their maintenance have been successfully met; the chief difficulty now is to keep their numbers within the forage limits of the reserve. The rapidity of increase is shown by the fact that if no disposal had been made of surplus animals since the original purchase in 1909, the herd through natural increase alone, would now total about 20,000 head. The calf crop at Buffalo park last year numbered about 1,200, with an approximately equal number of males and females.

The wisdom of the department's action in reducing the numbers in Buffalo park and of increasing the range at Elk Island park was particularly evident last year. The season proved to be very dry and the forage consequently scanty and poor, yet, owing to the fact that there was no overcrowding, the herds reached the autumn in good condition. Except for a severe spell in December, the winter was favourable, with moderate temperatures and snowfall and the animals came through well. A census taken in March showed 5,016 buffalo in Buffalo park and 716 in Elk Island park. No new shipments were made to the Far North during the year. In the autumn, with a view to keeping the herd in Buffalo park near the 5,000 total, a slaughter of 500 animals was decided upon. This was carried out early in December when the fur was prime. Owing largely to the educational and publicity efforts carried on by the department there now exists a ready market for buffalo products and no difficulty was found in disposing of the meat and hides, both at an advanced price compared with the previous year. Investigations were made with a view to improving forage conditions in Buffalo park and, at the request of the parks authorities, an official of the federal Department of Agriculture spent some time at Buffalo park, examining soil conditions and the present herbage. Steps are being taken to put the recommendations contained in his report into effect.

Antelope Herd.—The antelope herd at Nemiskam park is thriving. Climatic conditions during the past year were very favourable, particularly the mild winter with its light snowfall. There was an abundance of grass in the park, the antelope came through the cold season in good condition with no loss, and the natural increase in the spring was very satisfactory. The herd in Nemiskam park now totals 300. The chief enemy of the antelope is the coyote but, as in other parks, this pest was less troublesome this year, apparently owing to some epidemic which decreased the number. In co-operation with the Department of Agriculture an investigation was made with a view to determining the importance of sage brush in the feed of antelope and of discovering methods of increasing the growth of the plant in Nemiskam park.

Beaver.—Questionnaires were sent out to the game warden staffs in Banff, Jasper, Waterton Lakes, and Elk Island national parks, to obtain a census of the present number of beaver in each park; also suggestions as to their control where desirable and propagation in selected areas. Beaver had increased to such an extent in Cabin lake, Jasper park, that they were causing trouble with the water supply system there. The superintendent was authorized to trap a number of these alive and to place them in other waters of the park. Beaver were also found to be damaging the fish hatchery at Waterton Lakes park and authority was given the superintendent there to capture twenty-five animals alive for transfer elsewhere in the park.

FIRE PROTECTION

Owing to the extreme dryness of the season a number of fires occurred in the parks. The vigilance of the wardens, however, and the use of up-to-date fire-fighting equipment reduced the fire damage to the minimum. There are now in the parks 150 portable pumps with 200,000 feet of 1½-inch hose; several self-propelled pumpers with hose trucks similar to those used in cities, for use on highways; trailer pumpers of 20 horse-power; and automobile front-end pumps. Each year the equipment is being added to and the manner in which fires are now brought under control shows the efficiency of the provision made to safeguard the great park areas from fire.

The numbers of fires, the areas burned over, and the cost of extinguishing is shown by the following tables:—

RAILWAY FIRES DURING 1929-30

Park	Number of fires	Area burned acres	Cost of extinguishing \$ cts.

THE BIG BEND HIGHWAY

Following negotiations between the federal Government and the Government of British Columbia, arrangements were made for the construction

of the Big Bend highway which will connect Revelstoke with Golden and form the last link in the western section of a trans-Canada motor route. The road, which is now under construction, when completed, will provide a direct way through all-Canadian territory from Winnipeg to Vancouver and furnish an artery of communication which from a tourist point of view should prove of inestimable economic value to the country. Two years ago the Dominion Government constructed a link in the highway from Lake Louise in Banff national park through the Kicking Horse pass via Yoho park to connect with the provincial road through the Kicking Horse canyon from Golden, B.C. About the same time the province of British Columbia completed the scenic highway up the Fraser valley and as far as Revelstoke, B.C. There remained only the barrier of the Selkirk range to be surmounted, but this involved many engineering difficulties. Under the agreement made by the Government of Canada with the province of British Columbia the eastern section of the Big Bend highway from Donald to Boat Encampment at the head of the Big Bend will be constructed by the Dominion, while the western section from Boat Encampment to Revelstoke will be built by the province of British Columbia.

The Big Bend route will afford a spectacular scenic motor trip. The highway from Calgary to Vancouver, will pass through mountain scenery of unsurpassed grandeur and sublimity. Lofty mountains, deep luxuriant valleys, snowfields, and glaciers with many charms truly alpine in character, will be unfolded to the tourist. By the completion of this link the people of the Prairie Provinces will have ready access to the sea-level climate of the coast, while Banff and the beautiful Lake Louise district will be brought within easy reach of the people of the Pacific coast.

Over 500 miles of motor highways, more than 2,000 miles of trail and nearly 900 miles of telephone lines were under maintenance last year. The mileage by parks is as follows:—

Park	Roads	Number of miles	
		Trails	Telephone lines
Banff.....	145	769.0	235.25
Jasper.....	108	647.50	308.25
Yoho.....	55	168.25	44.25

	508	2,087.75	856.87

LANDSCAPE AND ARCHITECTURAL WORK

The plans of a large number of buildings proposed to be erected in the various national parks were examined and in the majority of cases drawings showing suggested revisions to elevations were prepared with a view to improving the external appearance without adding to the cost of buildings. These included designs for residences, stores, hotels, theatres, banks, churches, hospital, service stations, masonic lodge, tea rooms, public garages, and other structures.

Working and detail drawings and specifications were prepared for the following new Government-owned buildings.

Gateway building, eastern entrance to Banff park.

Milk vendor's store at Tunnel Mountain auto campsite, Banff park.

Addition to dressing room accommodation at Cave and Basin swimming pool, Banff park.

Residence for superintendent, Kootenay park.

Stores and garage building, Yoho park.

Residence for superintendent, Yoho park.

Gasolene and oil storage building, Yoho park.

Addition to Government garage, Waterton Lakes park.

Addition to Administration building, Waterton Lakes park.

Administration building, Prince Albert park.

Caretaker's office, auto camp grounds, Prince Albert park.

New Royal Canadian Mounted Police quarters, Prince Albert park.

Alterations to foreman's cottage, Buffalo park.

Refreshment pavilion, Point Pelee park.

Pavilion, Beau Rivage island, St. Lawrence Islands park.

Plan of War Memorial park at Mattawa, Ont.

A number of plans for new subdivisions and automobile camp grounds in Prince Albert park, where new roads are opening up attractive building areas, were prepared, also plans of proposed zoning areas in the townsite of Banff. Designs were drawn as well in furtherance of landscape development at the Great Divide near Stephen, B.C.

PUBLICITY

The Publicity Division was very active during the year. A systematic course of lectures illustrated by moving pictures and coloured lantern slides was given in Canada and the United States. Attractive publications were issued, moving pictures loaned, and articles and memoranda furnished to writers, magazines, and newspapers. The number of lectures delivered during the year was 140. Moving pictures shown outside the office, 718; within the office, 1,788; loaned, 355. The photographic library was increased by several hundred negatives; 23,975 new prints were added to the collection; and 16,481 distributed. Enlarged pictures sent out numbered 1,162; coloured slides added to the collection, 3,456; loaned, 4,710. Eighty-five lectures were prepared and provided for outside lecturers and 437 articles with 291 cuts furnished papers and magazines. Framed pictures used for exhibition purposes numbered 340.

To meet the increasing demand for publications, 344,380 pamphlets (new editions and reprints) were printed. These included:—

First editions—*Jasper*, 10,000; *Banff, Kootenay and Yoho Parks*, 25,400; *Guide to Waterton Lakes Park*, 25,000; *Elk Island Park*, 25,000; *Geological Story of Jasper National Park*, 10,000; *Guide to Fort Wellington*, 10,000; *The Succession of Fossil Faunas in the Eastern Part of Jasper Park*, 1,000; *Sedimentation in a Glacial Lake*, 1,000.

Reprints—*Banff, Kootenay and Yoho Parks*, 51,250; *Rocky Mountains Circle Tour*, 50,000; *Waterton Lakes Park*, 35,815; *The Kicking Horse Trail*, 25,100; *Kootenay National Park and the Banff-Windermere Highway*, 25,300; *Guide to Fort Anne*, 25,450; *Through the Heart of the Rockies and Selkirks*, 10,065; *Prince Albert National Park*, 10,000; *Tourists' Guide of Canada-1929*, 1,000.

During the year 209,095 pamphlets were distributed, besides 2,500 copies of the Annual Report of the Commissioner of National Parks, 1927-28.

REVENUE

Revenue collected by the National Parks of Canada during the fiscal year ended March 31, 1930, amounted to \$251,007.78. The following statement shows the revenue by parks:—

	1929-30	1928-29
	\$ cts.	\$ cts.

Detailed reports of the work in the different parks are found hereunder.

SCENIC PARKS

BANFF NATIONAL PARK

Reports show that Banff national park had a very successful year. Tourist travel by motor assumed greater proportions than ever before. The total number of cars, east-bound and west-bound, through the Kananaskis gateway was 74,246, an increase of 6,410 cars over the previous year's figures. Passengers numbered 142,337, or 21,439 more than in 1928. Of the grand total of visitors by motor 135,577 were from Canada and 6,760 from the United States.

Tunnel Mountain motor campsite showed increasing popularity. During the season 7,309 cars and 26,861 persons were accommodated on the grounds, establishing a record. Of the campers 24,139 were from Canada and 2,722 from the United States. The record for a single day was made on June 30, 1929, when 768 cars and 3,141 persons were in camp, as compared with 685 cars and 940 motorists on July 15, 1928.

As usual the Government hot springs proved popular with bathers. At the Cave and Basin bathing house registrations showed 66,305. New daily and week-end records were established. On July 1, 2,295 bathers passed through the turnstile, and during the week-end June 29-July 1, 4,731 bathers were accommodated. The number of visitors to the Cave adjacent to the hot springs was 61,010. At the Upper hot springs there were 46,146 registrations.

Museum, Zoo, and Animal Paddocks.—An outstanding place of interest to visitors is the Banff museum. During the year over 20,000 people viewed the collections of big game and smaller animals; bird, fish, and plant life of the region; geological specimens and Indian relics. The Banff zoo was again the centre of interest for thousands of tourists. The animals and birds now being

cared for at the zoo include: 1 polar bear, 2 grizzly bears, 1 black bear, 1 cinnamon bear, 1 mountain lion, 1 Canada lynx, 1 bobcat, 4 timber wolves, 4 coyotes, 1 badger, 2 martens, 1 gopher, 3 porcupines, 1 ermine, 2 great horned owls, 1 peacock, 2 golden eagles, and 4 Canada geese. The exhibition herds of animals at the paddocks were in splendid condition. These comprised 22 buffalos, 25 elks, 7 Angora goats, 10 Rocky Mountain sheep, 9 four-horned sheep, 7 Rocky Mountain goats and 5 yaks.

Permits and Licences.—Permits and licences covering the various business activities carried on in the park totalled 20,560. Of these 18,203 were motor licences for transients. Motor licences for park residents numbered 625; guides' licences, 58; chauffeurs' licences, 515; restaurant and tea room licences, 41.

Banff Fire Protection.—There were few fires during the tourist season, and what outbreaks occurred were quickly brought under control and caused no serious damage. During the year the Banff volunteer fire brigade responded to nineteen alarms. The total loss amounted to \$723. The brigade now numbers 25, officers and firemen. A night patrol was maintained in the townsite by the local detachment of the Royal Canadian Mounted Police.

Mosquito Control.—The campaign against mosquitoes in the park has shown gratifying results. After a thorough investigation of conditions some years ago, officers of the Department of Agriculture found that the most important species of mosquito to combat in the neighbourhood of Banff was the *aedes*, members of which breed in flooded areas. When hatched out the adults may travel as far as four or five miles. Experiments have shown that the eggs retain their fertility as long as six years. During the larva and pupa stages the insects must breathe through the surface of the water and a thin film of oil will cause their death from suffocation in a maximum time of four hours. During May, June, and July of 1929, ten men were employed in the distribution of oil over the areas affected. A total of 2,565 gallons of oil was used on an area of 4,500 acres. Satisfaction was expressed by the officials in charge of the work that the fish *Gambusia affinis*, an enemy of the mosquito, which had been deposited some years ago in the pool above the Cave and Basin, had been prolific in their increase.

Roads.—The roads in and about Banff and throughout the park were maintained in excellent condition during the season.

Trails.—A new trail was constructed from Castle Mountain bungalow camp to Taylor lake, a distance of three miles.

Cabins.—A new cabin (No. 2 type) was constructed at each of the following points: On Bow Lakes trail, 10 miles from Lake Louise; at Bow pass; at Waterfowl lakes; on the Saskatchewan river near the mouth of Howse river. A storehouse was also erected near the mouth of Howse river.

Forest Telephone Lines.—New telephone lines were constructed from a point seven miles up the Spray river to Seventeen-mile camp, and from Lake Louise to Bow pass.

Public Health.—Little sickness was reported in Banff during the past year. Sanitary measures relating to the collection of garbage were strictly observed. Samples of milk and water were periodically submitted for analysis to the University of Alberta, Edmonton, and the returns in every case proved satisfactory. During the period from October 31 to November 5, the annual test of the dairy herds was made by Dominion Government inspectors and all the animals found to be free from tuberculosis.

Sports.—Banff is becoming more and more a centre for athletic events of all kinds. During the summer mountain-climbing, boating, swimming, and golf drew thousands to the park. The annual Indian Days' pageant and sports were carried out on July 23, 24, and 25, and were largely attended.

During Christmas week the Mount Norquay Ski Club started its activities, which subsequently gave much enjoyment to the members and winter tourists.

The winter carnival held under the auspices of the Banff Winter Sports Association was most successful. From February 1 to 8 great crowds attended the sports. There were racing, swimming and diving events, hockey matches, sleighing, ski-ing, toboggan races, dog races, ladies' hockey matches, trap shooting, ski-joring, and carnival dances. The last day was mainly devoted to a curling bonspiel and other ice events.

JASPER NATIONAL PARK

Jasper park is rapidly increasing in popularity. Last season the total number of visitors was 15,458, as compared with 14,000 the previous year. A large number of the visitors were accommodated at Jasper Park Lodge, which has been enlarged to care for 600 guests. The golf links were greatly improved by the removal of boulders from the fairways, the addition and adjustment of bunkers, and extensive fertilization. In August the Canadian Amateur Golf tournament took place, and early in September was held the usual Jasper Park Lodge Totem Pole tournament.

During the season many improvements were made in Jasper townsite to meet the needs of a rapidly growing population. A considerable amount of new sidewalk construction was completed, the electric and water services extended, and the work of installing the sewerage system continued.

New Buildings.—Building operations in Jasper included 15 residences, 1 new hospital, 1 store and a number of garages and small buildings. In addition the Canadian National Railways took out permits for extensions, including 1 golfers' sleeping quarters, 1 sixteen-room cottage, 2 ten-room cottages, 1 two-suite cabin, 2 sixteen-room cabins, 1 nurses' building, 1 four-suite cabin, 1 garage, altering 6 cabins, and extending steam lines, water lines, electric light and telephone services. The estimated cost of all above extensions and improvements undertaken was \$441,845.

Roads and Bridges.—The portion of the Maligne highway from the railway crossing to Jasper Park Lodge, which had been surfaced with McMurray tar sands, stood up well under the traffic, and was maintained in excellent condition. The rest of the road was gravelled where necessary.

At the new Miette River bridge the approaches were filled with 2,262 cubic yards of material and strengthened at the highest points by strong log cribs. On the Edith Cavell highway a considerable amount of widening was done on the upper sections. The road was in good condition during the season and only a small amount of gravelling was required. The tote road from the Astoria bridge on the highway to the Whirlpool River bridge, eight miles in length, was completed. Along the river flats where boulders protruded, a covering of heavy silt was laid, which packed down and made a smooth running surface. On the Medicine Lake tote road culverts were put in at low points and considerable gravelling done. This road is being used increasingly each year by cars from Jasper in connection with trips to the wonderful Maligne Lake district.

The Rocky River trail was continued from mile 18½ to mile 36. Standard construction was maintained, making a good path for the pack train. When completed this trail will join the standard trail at Southesk river and the Forestry trail. There are now 379 miles of standard trails in Jasper park and

268 miles of "pack" or second-class trails. Fifteen miles of new telephone line were constructed during the year from Jacques lake to and up Rocky river. Forest telephone lines within the park now total 308 miles. New buildings included a warden's cabin of improved design at the forks of Rocky river.

Sanitation.—The drainage system was extended and new sewers installed and the usual routine of garbage collection and other sanitary measures continued.

Horses.—There are now ninety draft, saddle, and pack horses in the Government service in Jasper park.

Fires.—During the season there were three railway fires, two of which were caused by sparks from locomotives. The areas burnt over total nine and one-half acres and the cost of extinguishing was \$176.62. There were also sixteen fires of a general nature in the park which were extinguished at a cost of \$450, and one town fire which caused a loss of \$300.

Wild Life.—There has been a noticeable increase in all species of wild life in Jasper park. Grazing and food conditions generally were everywhere good and the animals appear well nourished and healthy.

Elk are becoming quite numerous and are finding new feeding grounds all over the park. The largest herds range between Pyramid mountain and Cabin creek, and many frequent the Athabaska and Miette valleys. The number of elk in the park is placed between 3,000 and 4,000.

There was a large increase in Rocky Mountain sheep during the year. All the old ranges, including Pocahontas, Interlaken, Brazeau, Snake Indian river, Moose Horn creek, Southesk river, and the northern boundary of the park, were well stocked. The sheep are now spreading wherever they can find suitable ranges. A large flock has been seen regularly at Cavell bridge on the motor highway, and has been a great attraction to tourists. A fine herd may also be seen daily on the Maligne range. It is estimated that there are now 20,000 sheep in the park.

Rocky Mountain goat are multiplying rapidly and are in good condition. Large herds may be seen about mount Kerkeslin, the shale banks on the Snake Indian river, Smoky river, Colin range, and Maligne lake. They are also found to be in increasing numbers between Circus valley and Whistler mountain, where they keep to high altitudes. The supervising game warden places their number at between 9,000 and 10,000.

Black bear, cinnamon bear, and grizzly bear are becoming numerous. Grizzlies have been seen during the spring and early summer in the low valleys, especially the Athabaska valley, around Devona and Hawse. They are also found in numbers in the Moose Horn valley. Last year there were estimated to be 5,000 bear of all kinds in the park.

Moose range in practically every valley and are becoming very plentiful. These animals have been seen in large numbers about the Brazeau, Rocky, and Snake Indian rivers, and last fall twenty-eight splendid specimens were seen at Four Point camp near Nigel pass. There are at least 10,000 moose in the park.

The season was particularly good for deer which now inhabit practically every valley in the park. They have shown a marked increase and are in fine condition. The Athabaska and Brazeau valleys are favourite feeding grounds for these graceful animals which now number in the park approximately 25,000.

Caribou are steadily increasing in number. Their range is along the northern boundary about Byng pass and Twin Tree lake, the Tonquin and Circus valleys and Smoky river. There are at least 9,000 caribou in the park.

Beaver, marten, lynx, and coyote are on the increase. New beaver houses and dams were noticed on several creeks and many lakes abandoned by these animals years ago are again being occupied by them. Wolf and wolverine are not so numerous as in previous years.

Sports.—Fishing was particularly good during the season. Fine catches were made at Caledonia lake, Jacques lake, at Buffalo prairie and in the Brazeau river. The 250,000 speckled trout fry deposited in Maligne lake last June appear to be doing well. A shipment of 50,000 rainbow trout eggs hatched at Jasper during the summer was distributed in Cabin lake.

During the winter a party of skiers from Jasper made the first ski trip on record to Banff. The journey took fifteen days to accomplish and was made during bitterly cold weather. Three high mountain passes had to be crossed and 160 miles of unbroken trail followed. Food supplies had been cached several months in advance at locations which would be accessible under skiing conditions and free from the depredations of wild animals. It was a noteworthy achievement.

In the month of March a party of skiers from Minneapolis visited Jasper park. Under the leadership of an experienced guide, the party proceeded through the Maligne Lake district, over McLeod pass, down to Brazeau lake, thence up Brazeau river and over Nigel pass to camp Parker, returning to Jasper via Brazeau lake, Poboktan pass and Maligne lake. The members of the party were so impressed with the trip they expressed an intention of returning next winter.

WATERTON LAKES NATIONAL PARK

Improved facilities for taking care of tourists and good weather conditions combined to give Waterton Lakes park its most successful year. The total number of registered visitors was 48,592, as compared with 26,002 the previous season. Of these 36,838 were from Canada, 11,673 from the United States, 62 from transatlantic, and 19 from transpacific points. The total number of motor cars entering the park was 14,725.

Many improvements were made in the townsite by planting trees, laying out flower beds, and grading, gravelling, and oiling the streets. Building operations were started on eight new buildings, and a fine addition was made to the school-house. Construction work on the new Roman Catholic church was well advanced.

Sports.—The facilities for sport were extended and the golf links, tennis courts, and bathing beaches were thronged during the season. At the golf course a new club-house was completed. The fairways and greens were in good condition, and accommodated over 60 per cent more players than last season. The tennis courts at the recreation grounds were maintained in excellent condition, and the bathing beach at Linnet lake was improved. Owing to the increased number of campers at Waterton lakes the campsite was extended, new sites provided, three new shelters erected, and an addition made to the community house.

Roads and Bridges.—Work on the Akamina highway progressed, and the road is now in good condition from the townsite to the junction with Cameron Lake road. The Pass Creek road was graded as far as the upper bridge and in places relocated. Beyond this point to Red Box canyon the road where necessary was gravelled. On the Pincher Creek entrance road the work was mainly confined to straightening the "S" bend. At Waterton bridge the approaches were improved and the bridge itself strengthened.

During the tourist season the roads leading into Waterton Lakes park were in good condition. The road from Cardston to the park, which connects with the

motor highway leading into the United States, was kept in repair by the provincial authorities and also the road from Cardston to Macleod. The park was thus connected with roads to the south and with a good gravel highway as far north as Edmonton.

Trails.—All trails were kept in a good state of repair. Six miles of construction work was carried out on Carthew trail, which is now passable from Cameron falls to Cameron lake. This scenic way when completed should prove one of the most popular in the park. Work was also done on the Bertha Lake Shore, Pass Creek, and East Boundary trails.

Fires.—Seven fires were reported during the season but by prompt measures these were quickly controlled, and the damage done was negligible. At Cameron lake where the largest of these fires occurred a new cabin was built and furnished with fire-fighting equipment.

Sanitation.—An officer of the Department of National Health made an inspection of sanitary conditions and arrangements were made to ensure satisfactory water supply and sewage disposal. An incinerator was built and better facilities provided for the disposal of refuse.

Wild Life.—Wild life of many kinds appears to be on the increase. Mule deer, beaver, coyote, and rabbit are plentiful throughout the park, while elk, mountain sheep, and mountain goat are steadily increasing in numbers. White-tail deer, moose, wolf, marten, lynx, and fox are scarce, and bear show a noticeable decrease. Of particular interest is the great increase in beaver. There are now over 1,500 of these animals in the park.

YOHO NATIONAL PARK

Motor travel to Yoho national park totalled 8,117 cars carrying 26,431 persons. The season was a particularly dry one, and due to the absence of fires and the general good condition of roads and trails, ideal for visitors. The heaviest traffic to the park was from the east, entries by the Kicking Horse pass showing 5,268 cars and 17,036 persons. Of these 4,143 cars were Canadian and 1,125 foreign. Eastbound cars totalled 2,847—2,457 Canadian and 390 foreign—carrying 9,395 persons. This is an increase over the previous year of 982 cars and 2,291 passengers.

During the season many betterments were made in the park. The town-site of Field was much improved, trees pruned, and streets regraded. Work on the residence for the park superintendent was started, a new fireproof gasoline and oil house constructed.

The camp sites throughout the park were kept in splendid condition. At the Kicking Horse campsite a new community kitchen was erected and equipped with camp stoves, tables, and benches. Registrations at this camp ground showed 928 cars and 3,328 people. Camps were opened on the roads leading to Yoho and Emerald lakes and these as well as the camp grounds at Field and Chancellor peak were well patronized during the season by the motoring public.

Road Improvement.—A great deal of repair work was done on the main and subsidiary roads. The main highway from the east to the west boundaries of the park was maintained in excellent condition. The road was widened in places and the whole highway oiled. On the two and one-half-mile section of road near Misko the grade was widened. Between the railway crossing and the bridge over the Kicking Horse river, the river bank was matted for a distance of about 600 feet. The Ottetail road was graded and the Yoho and Emerald Lake roads improved. On the Yoho road a considerable amount of

log crib work was done to widen the grade to standard width, and 1,600 feet of guard-rail constructed. The whole of the road was surfaced, and the turns at the Switchback widened. Portions of the road were oiled. Travel on the Emerald Lake road is always particularly heavy during the period the Chalet is open, and besides widening the road a great deal of surfacing was necessary to keep it in condition. The roads were regularly patrolled by the Royal Canadian Mounted Police and throughout the season no serious accidents were reported.

In co-operation with the Canadian Pacific Railway Company, park officials commenced improving and developing the area near the Great Divide. On both sides of the summit the stumps and debris are being cleared away. A new channel was made for the creek. At a point just below the main highway the channel was widened to form a pond, at the outlet of which a waterfall was constructed.

Trails.—New trail construction consisted in building an extension to the Otterhead trail up Otterhead creek for a distance of five miles. This will greatly facilitate fire protection work as it makes Otterhead valley accessible to workers with fire equipment. Amiskwi, Summit lake, Emerald lake, Burgess pass, Emerald creek, Upper and Lower Twin falls, President glacier, and Ottetail trails were cleared and repaired. These trails open on some of the most spectacular scenery in the Rockies. Signboards showing mileage were placed at all points of trail intersection.

Wild Life.—Wild life, including moose, deer, and fur-bearing animals, is on the increase. Fishing in the lakes and streams of the park was better than in previous years. Ninety thousand rainbow trout fry were distributed in the park waters from the Banff hatchery. Of these 20,000 were placed in Cataract creek, 10,000 in Ross lake, 25,000 in lake O'Hara, 5,000 in Giddie creek, 20,000 in Emerald lake and 10,000 in Yoho lake.

Fires.—During the season four railway fires were reported but owing to prompt action were quickly controlled. Only one bush fire, caused by lightning, did extensive damage. This outbreak along the river burned over an area of about 1,500 acres.

GLACIER NATIONAL PARK

The season was a quiet one in Glacier park as far as tourist travel was concerned. This may be attributed to the fact that at the present time the park lacks tourist accommodation. Since the dismantling of the old Canadian Pacific Railway hotel at Glacier no new building has been erected. The building of the Big Bend highway through the valley of the Columbia river will no doubt result in increased travel to Glacier park, as the road will skirt the park and open this spectacular Selkirk region to motorists from the Pacific coast and the Prairie Provinces.

Roads.—Early in the season the road gang repaired the road between the railway station and the site of the old Glacier hotel. The Rogers Pass road and the road to the Nakimu caves were graded and repaired. Mount Hermit, Rogers Pass, Flat Creek, Baloo Pass, Beaver River, Grizzly Creek, and Asulkan trails were gone over and put in good condition. An addition was made to the warden's cabin at Glacier. Repairs were also made to the Flat Creek cabin and the caretaker's cabin at the Nakimu caves.

Nakimu Caves.—Development work at the Nakimu caves was continued. The passage-way from Number Two entrance through Satan's Palace to the Ball Room was widened and improved. Concrete and wooden stairways with handrails were constructed. In Number Three cave the stairways were repaired and at points replaced.

Alpine Club.—The Alpine Club of Canada held their twenty-fourth annual camp on the site of the old town at Rogers pass. The visitors, who came from many parts of the world, numbered 142.

Wild Life.—Wild life in the park is plentiful. Goat, caribou, deer, and bear are numerous, and the fur-bearing animals appear to be on the increase, particularly marten and beaver.

KOOTENAY NATIONAL PARK

The Banff-Windermere highway was opened to tourists in May and a good year was reported. There was a slight decrease in travel from the Prairie Provinces attributable to business depression. During the season 16,121 cars carrying a total of 51,772 passengers registered in the park. Of the visitors 39,444 were Canadians and 12,328 citizens of the United States.

The bathing house at the Sinclair Radium hot springs, which was opened last June, had a record attendance. During the season 25,064 bathers made use of the baths. The pool is now 110 feet in length, an extension of thirty feet having been made last October. Three new cabins were erected by the Canadian Pacific Railway company on their property at the Radium hot springs. Further building operations included the superintendent's residence and garage.

Campsites.—Improvements were made to all campsites and at Sinclair Canyon campground two new shelters were erected. During the month of November all the cabins were removed from the Bungalow camp at Vermilion crossing to Storm mountain, with the exception of the main building which was transferred to the Royal Canadian Mounted Police for use during summer patrol work.

Roads and Trails.—The highway was maintained in splendid condition. Double hub rails were placed at curves in the road and no accidents were reported during the season. The old Settlers road from the highway to the southern boundary of the park was made fit for motor travel. This in addition to being of interest to tourists is important for fire protection work, as fire equipment may now be moved and patrols made by car. Two miles of motor road were built from Kootenay Crossing up Kootenay valley and the remainder of the trail cleaned out to the northern boundary of the park. Three miles of trail were also reconstructed up the Hawk Creek valley, and two additional miles of trail cleared. This trail when completed will connect with the Red Earth trail over Ball pass in Banff park now under construction. A survey was made for the location of a trail from Floe lake to Wolverine pass. When this and the Hawk Valley trail are completed a through scenic trail will be provided from Banff to Yoho park via Kootenay park.

Fires.—Although the season was unusually dry no serious fires occurred.

Wild Life.—A marked increase in wild life of all kinds was noted. Along the Kootenay valley bear, moose, and elk were numerous, and hunters during the season reported plenty of game outside the park boundaries.

MOUNT REVELSTOKE NATIONAL PARK

Work was begun on the lower slopes of Mount Revelstoke highway the last week in April. At narrow points the road was widened and put in good shape to the summit of the mountain beyond lake Balsam, where a loop in the road was constructed to facilitate the turning of cars. During the season 1,411 persons registered at the forest outlook station at the summit. This number, however, represented only a percentage of the people who actually entered the park.

Roads and Trails.—The public camping ground laid out in 1928 on the shores of Balsam lake, was extremely popular with tourists. The road leading from the main highway to the lake was conditioned to enable cars to drive right to the campground. An extension of two miles was made to the fire trail commenced last year towards the Clachnacudainn slopes. The trail passes through dense timberland and is an added safeguard for fire-protection purposes. All other trails in the park were cleared and repaired, particular attention being given to the Lindmark and Greely Creek trails, and those leading to Eva and Millar lakes, as the areas to which they lead are of increasing interest to visitors.

The three wooden posts which had been planted by H.R.H. the Prince of Wales, H.R.H. the Duke of Connaught, and H.R.H. Prince Arthur of Connaught, to mark various stages of road construction, were replaced by stone cairns each with a bronze tablet suitably inscribed. The sectionmen's cabins at the four-mile and sixteen-mile posts were repaired and further improvements made on the ski hill. The outside turn on the runway was built up, and benches were constructed for the convenience of spectators. The annual ski tournament was held the first week in February and was well attended.

Fires.—Five fires were reported during the season. With the exception of one, which burned over about one hundred acres of timberland, they were extinguished before any material damage was caused.

PRINCE ALBERT NATIONAL PARK

Over ten thousand tourists visited Prince Albert national park last year, which indicated the increasing popularity of the park as a resort for campers, canoeists, and fishermen. During the month of August the Regina Board of Trade held a convention in the park, there being present 160 persons. A delegation from the newly formed Provincial National Parks Association also spent four days in the park viewing points of interest. Among distinguished visitors during the summer were Lord and Lady Cromer and party.

Building.—Considerable activity took place in the Prospect Point residential subdivision last year. Three new cottages were erected and construction work begun on two. Many inquiries were made about building lots along the southwest shore. When the road to the Narrows is completed this district should be popular as the building sites are in close proximity to lovely sand beaches. In the business subdivision one new store was erected and five lots filed on by firms which propose building early next year. The park superintendent's residence, at Waskesiu lake is now ready for occupation.

Campsites.—Last spring the campsite along the main beach of Waskesiu lake was enlarged by underbrushing, clearing and draining. During July and August further extensions were made to this site to accommodate campers. An attractive area was cleared on Kingsmere lake, two small campgrounds were established on Crean lake, and a large one at Sandy lake. The last mentioned is situated half way between Prince Albert and Waskesiu lake, and is made use of by those wishing to break the journey to Waskesiu.

Roads.—The highway to Waskesiu, completed in the fall of 1928, was maintained in good condition. The entire road was gravelled and construction work was also done on the Meridian-Rabbit road.

Air Base.—In view of the great increase in commercial flying in the northern part of Saskatchewan it was considered advisable to establish an air base at Waskesiu lake. This was done and the base was used during the summer and fall by privately owned and Government forestry planes.

Telephones.—The forestry telephone lines were extended to the air base at Waskesiu lake and to Crean lake. These communications proved very useful in game-protection and fire-suppression work.

Permits and Licences.—Seventy permits and licences were granted last year. These included: 7 timber, 5 building, 14 hay, 10 lot-rental, 5 hay-cutting, and 5 air-base permits; and 14 chauffeur, 3 motor-livery, and 2 boatman's licences.

Fires.—Six fires were reported in the park during the year which were extinguished at a total cost of \$1,489.70. The majority of the fires started outside the south and west boundaries of the park.

Wild Life.—There was a noticeable increase in wild life last season. Moose, deer, and elk were numerous and are becoming quite tame. Caribou, while not so plentiful, were reported in sections of the park where they have not been seen for years. Birds, particularly waterfowl, are multiplying rapidly.

The investigations of the game fish possibilities of the waters of Prince Albert park, which are being carried out through the assistance of the Biological Board of Canada, were continued by a small field staff of trained workers. The general survey begun the previous year was extended by additional work on Crean and Kingsmere lakes and on those waters in the recently added northern section of the park, namely, La Vallee, Burntwood, and Clearwater lakes with their tributary streams.

Detailed observations on possible spawning grounds and water temperature in Waskesiu lake were also obtained with a view to the experimental introduction of small-mouthed bass into this lake. While the mean temperatures and food conditions are not wholly favourable an experimental planting of adult bass and of fry was recommended. Kingsmere lake was found suitable for game trout and the experimental introduction of the "Kamloops" type was recommended for this lake and speckled trout for MacLennan river. The committee also suggested that additional efforts should be made towards the conservation of the present game fish fauna (1) by modification of the existing game laws to suit the needs of the park and (2) by a campaign for the education of sportsmen and visitors.

ANIMAL PARKS

BUFFALO PARK

Although grazing conditions in the park were poor as compared with other years, the animals were in good condition and came through the winter well. The following table shows the animals in the park on March 31, 1930:—

Buffalo.....	5,016
Elk.....	654
Moose.....	66
Mule deer.....	1,994
Antelope.....	1
Yak.....	33
Domestic cattle.....	13
Hybrid stock.....	20

Farming operations were carried on as usual. Early in April 3,600 bushels of oats were shipped to Banff and Jasper national parks. Due to strong winds and dry weather grain crops were very poor. Weather conditions were, however, good for hay. Approximately 1,500 tons were cut on the Ribstone meadow and 18 tons of rye grass taken off a plot at the farm which had been seeded down two years ago.

Owing to the rapid increase in the buffalo herd, 500 buffalo were slaughtered for sale. Fifty carcasses were reserved by the Department for native relief purposes in the North.

Fencing.—Fence repair work was carried on throughout the season and over 100 miles of fence were put in shape. In addition to this work a change was made in the location of the fence at the northwest corner of the park to include a portion of section 35, township 44, range 8, west of the Fourth Meridian in which there is good grazing. A change was made in the position of the Hardisty gate, and a short piece of fencing constructed near Jamieson lake for the convenience of riders when on the round-up.

Fire Protection.—Fireguards, both inside and outside the main fence, as well as cross guards were ploughed. Practically all this work was done by park teams. Additional hose was supplied for use at the farm buildings and improvements made at the hydrants for quicker service.

Roads.—Maintenance work was done on the new road from Wainwright to the Home Paddock entrance gate, and the old trails which had worn into deep ruts were repaired.

Buildings.—In the fall the park office was moved from the old location at the superintendent's residence to the new Federal Building in Wainwright. Extensions were made to the foreman's cottage and improvements to the riders' boarding house at the abattoir. A well was drilled in the winter quarters to provide water for the buffalo.

Permits.—Dry wood timber permits were issued to settlers living in the vicinity of the park for 175 cords, also for 4,500 green willow pickets.

Predatory Animals.—There was a marked decrease in the number of coyote in the park and most of those destroyed were affected with mange. Altogether nine were shot by the wardens.

Visitors.—During the season 18,753 people registered at the park. The numbers of visitors entering at three of the park gates were as follows:—

Wainwright gate (Home Paddock).....	15,978
Hardisty gate.....	1,666
Farm gate.....	1,109
Total.....	18,753

ELK ISLAND PARK

Visitors to Elk Island park totalled 22,611, which represented an increase of 3,656 over the registrations of the previous year. In addition to the fine herds of animals in the park the bathing beaches and picnic grounds afforded the tourist a wide diversity of entertainment. The buffalo herd was in splendid condition and the wardens reported an increase in moose, elk, and mule deer. During the season two animals—an elk and a moose—were killed for specimen purposes and presented to the museums at Banff and Ottawa. Animals in the park now number 716 buffalo, 398 moose, 500 elk, and 200 deer.

Repair work was carried on as usual. The main fence was put in good shape and all fireguards conditioned. Additional guards were ploughed along the west boundary for a distance of four miles. A lookout tower was erected west of Astotin lake and connected by telephone with park headquarters and the tower and headquarters of the Cooking Lake forest reserve.

Haying operations, owing to the dry season, were not extensive. One hundred and ten tons were stacked, which, with the large tonnage of hay carried over from the previous year, provided a supply for the year's feeding requirements.

Roads.—The roads in the park were maintained in good condition by use of the grader. Several culverts were replaced. The construction of the road from Sandy beach to the main gate was completed and several miles surfaced with gravel.

Wild Life.—Bird life showed an increase. Blue heron nest in numbers on Crane island and migratory birds are plentiful. Prairie chicken and partridge appear also to be on the increase. There was a marked absence of coyotes in the park, only one being killed during the season.

RECREATIONAL AREAS

POINT PEELE PARK

The season was an exceptional one so far as tourist travel was concerned. It is estimated that 20,800 cars entered the park carrying a total of 83,200 visitors. The number of campers who took out permits for less than a four days' stay was 446. Of these 120 were from Ontario and 326 from the United States. Camping permits for more than four days numbered 89; 50 from Ontario and 39 from the United States.

Wild Life.—Wild life was reported on the increase. Squirrel, raccoon, and muskrat were plentiful. Quail were about the same in numbers, while pheasant showed a marked increase. Migratory birds were never more plentiful. Wild duck—black, grey, and blue-bill—were present in thousands. A great many whistling swan were seen in the marshes, and during the spring and fall migrations of wild geese were abundant.

HISTORIC PARKS

FORT ANNE NATIONAL HISTORIC PARK

The total number of visitors to Fort Anne park for the calendar year was estimated at 18,000. Of these, 13,516 were shown through the museum, an increase of 2,126 over the record for 1928. Among the notable visitors were a party of ninety members of the Canadian Women's Press Club; the captain and seven other officers of the French warship *Aldabaran*; officers of H.M.S. *Cape-town*; Hon. William Phillips, United States Minister to Canada, and Mrs. Phillips; M. Carteron, the Consul General for France, and Madame Carteron; the Right Hon. Lord Pentland; and Mr. and Mrs. E. R. Warren, of Boston, Mass. Mrs. Warren is a direct descendant of Paul Mascarene, the officer who mounted the first British guard in Fort Anne on the taking of the place in 1710.

On July 3, a party from Central Canada numbering 180 visited the fort. The Raymond-Whitcomb Tourist Agencies in August brought 73 visitors. On September 3 there was an excursion of 94 persons, members of the Schuetzen Club of New York. The teachers and pupils from the Annapolis County Academy visited Fort Anne on three occasions in November and once in December.

Several interesting discoveries have been made in the fort grounds during the year. During a visit to the Canadian Archives at Ottawa in November, 1928, the Honorary Superintendent was able to examine some old pictures of Annapolis Royal, dated 1751, which showed a blockhouse about which nothing had locally been known. Photographs of the pictures were obtained and with their aid the site was discovered. After some digging the foundation of the blockhouse was revealed. On the War Office plan of the fort in the Provincial Museum at Halifax the blockhouse shown in the picture is plainly marked and also another one hitherto unknown east of the fort, the exact location of which it will require a surveyor to determine.

Through the agency of the Historical Association of Annapolis Royal, Fort Anne came into possession of a fine portrait in oils of Queen Anne. The canvas is 25 by 30 inches and the picture is enclosed in a valuable old English carved gold frame. Another valuable gift received from the same association was a water-colour picture of Lieutenant George Wedderburn, of the 76th Regiment, who was the last commandant of Fort Anne, leaving in 1854 when the place was finally abandoned as a military post.

Protection of Migratory Birds

In June last, amendments were made to the regulations based on the *Migratory Birds Convention Act*, following the receipt of suggestions from the different provincial game officers and the chief federal migratory bird officers. A number of changes were made throughout Canada. The close season for the following migratory game birds was extended for an additional period of three years: little brown, sandhill, and whooping crane, swan, curlew, greater and lesser yellow-legs, black-bellied and golden plover, and all shore birds, except Wilson's or jack-snipe and woodcock. It was provided that lying in wait with firearms, with or without decoys, for migratory birds, should be considered *prima facie* evidence of hunting. The daily bag limit for woodcock was reduced from ten to eight, and a seasonal bag limit placed upon this species in the provinces in which it occurs. In Nova Scotia, the season for duck and rail, and goose and brant was changed. In New Brunswick, the opening date for the shooting of Wilson's snipe and woodcock on the islands in the Grand Manan group was made to coincide with that for duck, goose, brant and rail, in that part of New Brunswick. In Ontario, the season for taking Wilson's snipe was made to coincide with that for duck, goose, brant, and rail. In the province of British Columbia, the use of decoys of any kind in the hunting of band-tailed pigeon was prohibited, and the special provision concerning the hour at which shooting might begin on the first day of the open season was changed.

The staff for enforcing the *Migratory Birds Convention Act* continues at the same strength and there has been complete co-operation with provincial game departments. In accordance with the original plan the enforcement of bird protection measures has been left largely in the hands of the provincial authorities, thus avoiding duplication.

Some hundreds of honorary game officers co-operated with the branch in enforcing the law, and in furnishing valuable information respecting bird conditions in their localities. Honorary officers were kept informed on bird protection subjects by a system of circular letters. The members of the Royal Canadian Mounted Police helped materially by enforcing the law and by conducting bird observations in various districts, and Dominion Fishery officers lent valuable assistance as well. A staff of officers was maintained in the Maritime Provinces for the enforcement of the migratory bird law. All members of the New Brunswick provincial police were appointed *ex officio* game officers under the *Migratory Birds Convention Act*.

Drought throughout a large part of the Prairie Provinces greatly affected water-bird life during 1929. In parts of Saskatchewan there was believed to be a reduction of nearly ninety per cent in the number of duck raised, and conditions were probably as bad in some other parts of the prairie breeding area.

In addition to his general duties, the Chief Federal Migratory Bird Officer or the provinces of Ontario and Quebec, with the aid of a staff of temporary assistants and the bird sanctuary caretakers, carried out valuable protection work with respect to the abundant sea-bird life on the north shore of the gulf of St. Lawrence in Quebec during the summer.

The Chief Federal Migratory Bird Officer for the western provinces, while devoting much time to co-operative work with the provincial game authorities, was occupied as well in supervising the sanctuaries and public shooting grounds in these provinces and in making inspections of lands reserved. The latter work was undertaken jointly by the province, the Dominion Lands Administration and this branch.

Ninety-one prosecutions were instituted by Dominion officers in connection with the enforcement of the *Migratory Birds Convention Act*. These resulted in 83 convictions. Prosecutions instituted by provincial officers are not included in this summary.

Oil Pollution.—The department has worked in conjunction with the Department of Marine and Fisheries respecting the loss of bird life by oil dumped from vessels in navigable waters, or reaching navigable waters in other ways, and all losses of bird life from oil have been referred to that department. Following the conference at Washington, in which Canada took part, a draft convention on oil pollution of the high seas was prepared, but no international agreement for control has yet been concluded.

Bird Censuses.—The investigation to learn the distribution and movements of waterfowl, and their fluctuation in numbers from year to year, undertaken by this branch and the United States Biological Survey, was continued and has resulted in valuable data being collected from hundreds of wildfowl observers. Bird censuses taken on Christmas day were made at many points by members of the various naturalists clubs and by the officers of this branch. At Ottawa twenty-four species were found. Bird censuses taken from year to year give a comparative idea of the distribution of bird life at a time when it is at its lowest ebb.

Permits and Licences.—Permits and licences were issued for the calendar year 1929 as follows:—

Collection of birds for scientific purposes.....	355
Possession of birds for propagating purposes.....	549
Capture of birds for propagating purposes.....	38
Destruction of certain birds when found to be seriously damaging agricultural or fishery interests.....	66
Permits allowing the shooting of predatory birds in bird sanctuaries, etc.....	11
Taking of birds for banding purposes.....	110
Practising taxidermy.....	70
Shooting of goose and brant in Shelburne, Queens and Halifax counties, Nova Scotia, in the open season provided by law.....	615

Investigations.—Mr. J. Dewey Soper, by the co-operation of this Branch and the North West Territories and Yukon Branch, in 1928 was sent to southwestern Baffin island, for the purpose of studying birds and mammals, and especially to find the breeding grounds of the blue goose. He was successful in locating these breeding grounds. Assistance was extended Mr. Soper in various ways. His report of the discovery has been published by the North West Territories and Yukon Branch.

Bird Banding.—The Branch worked in full co-operation with the United States Biological Survey in tracing and recording migrations of birds by banding. Nearly all the work is done by voluntary co-operators. The official records of bird-banding returns for Canada are kept in this branch. From January 1, 1929, to December 31, 1929, 16,634 records of birds banded by Canadian co-operators and 7,955 repeats and returns on birds already banded were received, an increase of 5,977 records over last year, and of 5,430 repeats and returns.

Sanctuaries for birds are increasing everywhere; small estates, villages, golf courses, air ports, and lakes with bordering marshes are being included. Action

to reserve sanctuaries in Canada would not be effective if sanctuaries were not reserved in the United States. Consequently, it is of great interest to Canadians to know that the work of establishing sanctuaries is progressing in that country.

Public Shooting Grounds.—Certain lands near Pitt lake, British Columbia, were reserved for public shooting-ground purposes.

Educational Work.—Various camps attended by young people were visited, and instruction given in bird protection and natural history subjects. Requests for lectures on wild-life conservation were received from more than forty organizations that conduct summer camps for young people. The total distribution of pamphlets amounted to 72,783. Publicity concerning the shooting season and other bird protection matters was obtained through the distribution of 44,710 posters, 22,783 copies of the *Migratory Birds Convention Act*, and 24,819 abstracts of the regulations under it. Circular letters regarding the changes in the regulations for the season 1929 were distributed to the press throughout Canada.

Numerous lectures on bird protection were given by members of the permanent staff, and lantern slides were furnished to the honorary game officers and others for lecture purposes. Addresses on birds and bird protection were delivered over the radio. The lantern slide library contains 5,365 slides covering 1,143 subjects, and showing 391 different species of birds. In all, 3,079 slides were loaned free of charge.

Bird-House Competitions.—Much interest has been shown in the building of bird-houses, and bird-house competitions have been held under various auspices throughout Canada.

Contact with Scientific and Conservation Organizations.—During the year the branch was represented at the following national and international meetings interested in the protection and conservation of wild life:—

September, 1929—Meeting of International Association of Game, Fish and Conservation Commissioners, at Minneapolis, Minnesota.

October, 1929—47th stated meeting of the American Ornithologists' Union, at Philadelphia, Pennsylvania.

December, 1929—National Game Conference of the American Game Protective Association at New York, N.Y.

December, 1929—Meeting of the Province of Quebec Association for the Protection of Fish and Game at Montreal, P.Q.

March, 1930—Organization meeting of the Canadian Game Protective Association, at Ottawa, Ontario.

Historic Sites and Monuments

During the past year, work in connection with the preservation and marking of historic sites or structures eminently national in character, was carried on. In addition a number of sites were acquired on which to erect memorials and a scheme of development formulated for some of the larger areas already controlled. The annual meeting of the Historic Sites and Monuments Board, which acts in an advisory capacity to the Department of the Interior regarding all historic matters, was held in Ottawa, when a large number of sites were reviewed and from these a selection made for attention in future years.

Since the inception of this work, in 1919, approximately 950 sites have been under consideration and from these the Board has selected 246 as being of national importance and recommended them to the Department for preservation or marking. The Board has also suggested the marking of the birth-places of a number of outstanding personages in Canadian history by tablets bearing appropriate inscriptions.

Sites Marked

In previous reports a summary of sites already marked, now numbering 150, will be found. During 1929-30 the following sites of national importance were marked and the services of important personages commemorated by the placing of tablets and the erection of monuments:—

Admiral d'Anville's Encampment, near Halifax, N.S.—A rubble-stone cairn, with a bronze tablet affixed, was erected on a plot of land donated by Mr. E. Clayton, at the intersection of the Old French Landing and Bedford roads, to mark the place of encampment of the formidable but storm-shattered expedition sent from France under the command of Duc d'Anville, in 1746, to recover Acadia.

Fort La Have, La Have, N.S.—A cairn with tablet was erected on the light-house reserve at Fort Point, La Have, to mark the site of the fort built by Isaac de Razilly, Lieutenant-Governor of Acadia, in 1632, from which headquarters he administered the colony.

Fort Jemseg, Lower Jemseg, N.B.—A cut-stone monument with tablet, enclosed by an iron fence, was erected on a small plot of land donated by Mr. F. C. Nevers, to mark the site of the fort built in 1659 by Col. Thomas Temple, Governor of Acadia. This was the first trading post established by the English on the Saint John river.

Battle of the Petitcodiac, Hillsborough, N.B.—A cut-stone monument with tablet was erected near the railway station at Hillsborough to commemorate the events associated with the engagement which took place in the vicinity in September, 1755, between British troops from Fort Beauséjour and a French force commanded by Charles Deschamps de Boishebert.

Major Gilfrid Studholme, St. John, N.B.—A cut-stone monument with tablet was erected on Fort Howe hill to commemorate the public services of Major Gilfrid Studholme, a notable figure in the early history of New Brunswick. Major Studholme built Fort Howe in 1778 and was its commander. He zealously assisted the settlement of United Empire Loyalists.

Battle of Chateauguay, Allan's Corners, P.Q.—A tablet was affixed to the granite monolith, which stands on the site, to commemorate the victory of a small Canadian force and a little band of Indians under the command of Lieut. Colonel Charles Michel de Salaberry over a large body of United States troops which attempted the invasion of Canada on October 26, 1813.

The Royal Navy, Ile-aux-Noix, P.Q.—A tablet was affixed to the gateway at the south entrance to Fort Lennox to perpetuate the memory of the services of the officers, seamen, and soldiers of the Royal Navy, Royal Marines and Provincial Marines, who fought in defence of Canada on lake Champlain in 1776-77 and 1812-14.

Battle at Montgomery's Creek, near St. Johns, P.Q.—A cairn with tablet was erected on the St. Johns Golf Club property, adjacent to the King's Highway, to commemorate the events associated with the battle of September 6, 1775, when Montgomery's invading army, surprised by a force of Mohawks and Canadian Indians, was compelled to re-embark and retire to Ile-aux-Noix.

Coteau-du-Lac, P.Q.—A cairn with tablet, was erected adjacent to the public road at Coteau-du-Lac to commemorate the early events associated with that place. A canal was constructed in 1779-80; later a blockhouse, and then a fort were built for its protection. These proved of valuable service during the wars of the American Revolution and of 1812. Coteau-du-Lac was for many years the chief port of entry for imports into Upper Canada.

First Railway in Canada, St. Johns. P.Q.—A tablet was affixed to the railway station at St. Johns to mark one terminal of the first railway in Canada which led originally to Laprairie and was constructed to connect lake Champlain with the river St. Lawrence. It was opened for traffic on July 21, 1836, by Lord Gosford.

Bishop Alexander Macdonell, St. Raphael, Ont.—A cut-stone monument with tablet was erected adjacent to the public highway in front of the parish church at St. Raphael West to perpetuate the memory of the Honorable and Right Reverend Alexander Macdonell, patriot, military chaplain, educator, and legislator who lived and laboured with success at this place for many years.

Niagara Portage Road, Stamford, Ont.—A stone monument with tablet was erected on Stamford village green, adjacent to the Portage road, to commemorate events associated with the Queenston-Chippawa portage road, opened by United Empire Loyalists in 1788. This was the principal route of travel and trade to the Upper Lakes region until the opening of the Welland canal in 1829, and the completion of railway lines in 1854.

Ridgeway Battlefield, Ridgeway, Ont.—A cairn with tablet, was erected on a plot of land, adjacent to the Garrison road, donated by the township of Bertie, to perpetuate the memory of the officers and men who fought there in defence of Canada against Fenian Raiders on June 2, 1866.

Starting Point Brock's Expedition, Port Dover, Ont.—A cairn with tablet was erected in Powell park to mark the spot from which Major General Isaac Brock set out with his army of three hundred men, on August 8, 1812, to relieve the invaded western frontier. His brilliant capture of Hull's army at Detroit, with a much smaller force, saved this province to the Empire and made Brock the hero of Upper Canada.

First Electric Telegraph, Toronto, Ont.—A tablet was affixed to the St. Lawrence market building, which now stands on the site of the old city hall of Toronto, to mark one terminal of Canada's first electric telegraph line, connecting Toronto with Hamilton, inaugurated December 19, 1846.

Fort Fork, Alberta.—A cairn with tablet was erected adjacent to the road allowance passing through Lot 19, Shaftesbury settlement, to mark the site of the fort built by Sir Alexander Mackenzie, on the east bank of the Peace river, in 1792, and from which he set out in the following year on his quest for the Western Sea. This first crossing of North America north of Mexico, stimulated the commercial development which saved a coast on the Pacific to Canada and the Empire.

The Last Spanish Exploration, Point Grey, B.C.—A cut-stone monument with tablet was erected on the British Columbia University grounds, between the waters of English bay and the Marine drive, in commemoration of the first friendly meeting of the British and the Spaniards in these waters. The British commander, Captain George Vancouver, established mutual confidence and exchanged information with the Spaniards, Galiano and Valdes, and they then continued the exploration together.

Fort Steele, B.C.—A cairn, with tablet, was erected on a plot of land donated by Mr. William A. Drayton, adjacent to the Fort Steele-Fernie highway, to mark the site of the first North West Mounted Police fort in British Columbia, built in 1887 by Superintendent Sam Steele. The presence of this force secured peace and order in the country at a critical time.

Preservation Work

At several larger sites preservation work and improvements were carried out.

Fort Cumberland (Beauséjour), N.B.—The earthworks were repaired, the entrance to the park improved, and a number of markers erected to indicate the various points of historic interest.

Louisbourg, N.S.—The several buildings, vacated by property owners whose rights had been purchased, were demolished and removed; the area fenced; the casemates cleaned out and repaired; and a road built and surfaced from the gateway to the headquarters building.

Fort Chambly, Chambly, P.Q.—Masonry and concrete retaining walls were erected along the river front; a dry stone wall was built along the north side; and the inner walls were repaired and pointed.

Fort Lennox, Ile-aux-Noix, P.Q.—Extensive repairs were made to the north bridge across the moat, improvements made to several buildings, and the moat cleaned.

Fort Wellington, Prescott, Ont.—The blockhouse was re-shingled and painted, the inner palisades repaired and other improvements made to the museum and grounds.

Acquisition of Sites

Arrangements for the acquisition or control of a number of sites recommended by the board were made.

Fort Monckton (Gaspéreau), N.B.—An additional area of two acres was purchased with a view to future development work.

Fort St. Peters, St. Peters, N.S.—The Department of Railways and Canals granted authority for the erection of a memorial on their reserve at St. Peters to mark the site of the fort and trading post built by Nicholas Denys, in 1650.

First Coal Mine in Cape Breton, Port Morien, N.S.—The Dominion Coal Company has donated a plot of land for the erection of a memorial to commemorate the events associated with the establishment by the French in 1720, of the first regular coal mining operations in America.

Fort Ste. Anne, Ste. Anne, N.S.—Mr. George E. Fader has donated a plot of land twenty-five feet square, adjacent to the Baddeck-Cape North highway, on which to erect a memorial to mark the site of the fort built there in 1629, for the protection of the French settlement.

First Atlantic Cable, North Sydney, N.S.—The Western Union Telegraph Company has granted permission to place a tablet on the outer wall of the company's cable building at North Sydney to commemorate the events associated with the laying of the first submarine telegraph cable in North America in 1856. This cable connected Cape Breton with Newfoundland.

Wolfe's Landing, Kennington Cove, N.S.—Mr. D. A. McInnis has donated a plot of land on Gabarus bay, with a right of way from the main road, for the erection of a memorial to mark the landing place of Brigadier General James Wolfe's brigade, on June 8, 1758.

First Export of Coal, Minto, N.B.—The Canadian Pacific Railway Company has granted permission for the placing of a memorial on their station grounds at Minto to commemorate the events associated with the discovery and mining of the first coal for export in Canada.

Chambly Canal, Chambly, P.Q.—The Department of Railways and Canals has granted permission for the erection of a memorial on the canal reserve at Chambly to commemorate the events associated with Chambly canal, which was first opened to navigation in 1843.

Benjamin Sulte, Three Rivers, P.Q.—The city of Three Rivers has granted permission for the erection of a bronze plaque at the entrance to the city hall to commemorate the public services of Benjamin Sulte, historian and poet.

First Geodetic Survey Station, Kingsmere, P.Q.—Mr. M. Mulvihill has donated a plot of land twenty-five feet square on King mountain on which to erect a memorial to mark the site of the first Geodetic Survey station in Canada established in 1905.

Opening of St. Lawrence River to All Nations, Quebec.—The Quebec Harbour Commission has granted permission to place a tablet on the wall of the waiting room at the Princess Louise docks, to commemorate the opening of the St. Lawrence to all nations, January, 1850.

Mattawa Portage, Mattawa, Ont.—The Women's Institute of Mattawa has granted permission for the erection of a memorial in a small park controlled by them at the intersection of Main and Water streets, to mark one of the principal portages of the historic canoe route from Montreal to lake Huron and the Northwest.

Southwold Earthworks, near St. Thomas, Ont.—An area of five acres, north of Talbot road, was purchased on which a memorial is to be erected to mark the site of an old Indian stronghold, a unique example of a double-walled aboriginal fort, the origin and antiquity of which remain unknown.

Dominion Lands Survey System, near Winnipeg.—Senator Aimé Bénéard and Mr. John T. Haig have donated a plot of land twenty-five feet square, adjacent to the Portage highway, at its intersection with the First Principal Meridian, on which to erect a memorial to mark the site of the first monument on the Dominion Lands Survey, July 10, 1871.

Simon Fraser, Musqueam, B.C.—The Provincial Government has granted permission for the erection of a memorial at Look-Out Point, adjacent to Marine drive, at the west end of the Musqueam Indian Reserve, to mark the place where Simon Fraser ended his adventurous and dangerous exploration of the Fraser river in July, 1808.

APPENDIX

Alpine Club of Canada*Report of the Secretary—Banff Club House, 1929*

Members of the Alpine Club at Banff had a most successful season. Special camp arrangements attracted an unusual number of visitors who made the club house their headquarters for climbs and expeditions in the neighbourhood. Five new cabins were built to replace the original tent houses, making thirteen cabins in all, comfortably furnished, available to members.

The club house was a centre of information for climbing enthusiasts in all mountain matters. Contributing factors to the delightful time spent by members were the improved transportation facilities and good roads, which greatly increased the radius in which one-day outings could be made from Banff.

The usual climbs of the surrounding peaks were made, including the east face of Castle mountain—which for the first time was scaled by a lady—and the peaks in the Fairholme range. One of the outstanding mountaineering feats was a first ascent of mount Sir Alexander by three members of the club from New York: Miss H. I. Buck, Dr. H. J. Gilmour and Mr. E. L. Woolf.

Those in attendance were drawn from England, Scotland, Australia, Germany, China, the United States, and Canada.

Report of the Secretary—Rogers Pass Camp, 1929

The twenty-fourth annual camp of the Alpine Club of Canada was held from July 15 to 31, 1929, in the Selkirk range. Camp was made on the site of the old railway village at Rogers pass in view of the peaks of the Hermit range. A subsidiary camp was pitched at the Hermit hut, about two thousand feet above the valley, and proved an excellent base for climbing. From here mounts Rogers, Tupper, Hermit, and Sifton were ascended by various parties.

The camp differed in several ways from those of other years. When the Connaught tunnel was opened the former railway right of way through the pass was turned into a road and a motor truck became a practical and much-used convenience, as it served the purpose of a passenger omnibus for those who wished to climb the peaks in the Sir Donald chain of mountains and the Asulkan and the Dawson ranges.

Only two days of bad weather were experienced out of the seventeen spent in camp. Of these one was devoted to the annual meeting. The camp fire meetings were greatly enjoyed and proved most interesting. Meetings were addressed by visitors from many parts of the world. One hundred and forty-two members were placed under canvas, including representatives of the Alpine Club, England; the French Alpine Club; the American Alpine Club; the Swiss Alpine Club; the Appalachian Mountain Club; the B.C. Mountaineering Club; the Sierra Club; the Mazamas; the Mountaineers; and the Royal Geographical Society.

The principal mountains climbed were mounts Tupper, Rogers, Avalanche, Eagle, Uto, Sir Donald, Cheops, Ursus Major, Sifton, Selwyn, and Hasler.

Those present were drawn from the following countries: Canada, England, and the United States.

V

WATER POWER AND RECLAMATION

REPORT OF THE DIRECTOR AND CHIEF ENGINEER OF WATER
POWER, J. T. JOHNSTON

INTRODUCTORY

The organization of this service remains the same as for previous years and the reader is referred in this connection to the Annual Report of the Department of the Interior for the fiscal year ended March 31, 1926.

INTERNATIONAL WATERWAY MATTERS

During the year, international waterway problems received continuous attention, appropriate action being taken from time to time in connection with the various matters arising.

The Convention and Protocol signed between Canada and the United States on January 2, 1929, providing for the construction of remedial works at Niagara falls for the preservation and enhancement of the scenic beauty and for the concurrent experimental withdrawal of water from the Niagara river during the winter or non-tourist season, for the purpose of testing the effectiveness of the remedial works, was ratified by Dominion Parliament on May 20, 1929. The Convention still awaits ratification by the United States Senate.

The suit of the complainant states of Wisconsin, Minnesota, Pennsylvania, and Ohio versus the Chicago Sanitary District before the United States Supreme Court, with reference to the diversion of water from the Great Lakes system through the Mississippi watershed, has been closely followed throughout the hearings. In compliance with the decision of the Supreme Court released on January 14, 1929, Special Master Charles Evans Hughes was instructed to make a further examination into the situation to determine the practical measures needed to give effect to the court's finding and to determine the period required for their completion. The Special Master was authorized to hear witnesses, and with all convenient speed to make a report of his conclusions and of a form of decree.

In compliance with these instructions, Special Master Hughes held a hearing in Chicago on March 25 to 29, 1929, with subsequent hearings at Washington on April 15 to 26. A further hearing was held on September 23 to 25. Oral argument before the Special Master was held October 2, 3, and 4, and the Special Master submitted his final report to the Supreme Court late in December, 1929.

At the expiration of the time to file exceptions to the Special Master's report, the Supreme Court set March 12, 1930, for the hearing of oral argument on the exceptions filed by the litigants. Oral argument was submitted before the court on March 12 and 13. The court had not up to March 31 handed down its decision.

The Lake of the Woods Convention between Canada and the United States executed on February 24, 1925, provides for the securing of a flowage easement up to elevation 1064 sea-level datum on the United States shore of lake of the Woods and accords to Canada the privilege of representation by counsel should the costs be determined by means of the usual judicial procedure in the United States. In accordance with this provision Canada has been represented by

counsel in the proceedings which have been taken before the United States Federal courts in Minnesota. Commissioners for the evaluation of the lands were appointed in August and September, 1928, hearings being held early in December, 1928, and in February and March, 1929, relative to the instructions given to the commissioners.

The awards of the commissioners in the first petition comprising about two hundred claims were filed with the United States District Court, District of Minnesota, Sixth Division, on May 4, 1929. These awards were excessive and appeals were filed by the Governments of the United States and Canada. The United States District Court appointed commissioners to appraise claims in the second petition at Fergus Falls, state of Minnesota, U.S.A., on May 28 at the regular sitting of the court after hearing argument by counsel. The awards of the second petition were filed in the court in August and as these awards were on the whole satisfactory, very few appeals were registered by the governments but a large number were appealed by the counsel for the landowners. On August 12 the Federal District Court appointed the commissioners to appraise the claims in the third petition. The awards were filed on November 27, 1929. A number of the awards were appealed both by the governments and by the landowners.

The Federal District Court, comprising two judges without a jury, sat to hear the appeals of ten test cases in the first and second petitions. The court proceedings opened on November 7 and closed on November 22, 1929. All parties, including the Dominion of Canada, were represented by counsel and took part in the oral and written argument before the court. Complete written briefs were filed. As yet the court has not handed down its decision.

The Lake of the Woods Convention also provided for a reference to the International Joint Commission of the question of storage in Rainy lake, and in the boundary waters above, and of the development of power in connection therewith. After extensive field and office investigatory work the interim report of the engineers to the commission, incorporating the basic data upon which the problem can be properly studied, has been published, and office investigatory work has been carried out in connection with the final report.

The international problem of the Roseau river which has been referred by the Governments of the United States and Canada to the International Joint Commission for investigation and report was under active consideration throughout the year. Following public hearings which were held at Roseau, Minnesota, on June 6, and at Vita, Manitoba, on June 7, the commission, in a report addressed to both governments, found that the flood protective works which were being constructed by the Dominion Department of Public Works on the Canadian side of the boundary would not have the effect of raising the natural level of the Roseau river on the United States side of the boundary. These works were subsequently proceeded with and were brought to completion on February 15, 1930. At the hearings, the department's interests were represented by counsel and by the District Chief Engineer of Manitoba.

In accordance with the other questions of the Roseau River Reference, arrangements were made for a topographic survey of certain portions of the watershed in Canada. This survey was carried out during the summer months and the information was compiled in the form of map-sheets during the following winter. All work has been closely co-ordinated with that being done on the United States side of the border.

The application of the West Kootenay Power and Light Company to the International Joint Commission for permission to construct and operate certain permanent works in and adjacent to the channel of the Kootenay river at Granite, British Columbia, for the purpose of storing water in, and regulating the outflow from, Kootenay lake was submitted to the commission in September, 1929.

Basic investigatory work had been under way for some time by this service with a view to analyzing the hydraulic features of the application, and the effect of the proposals on the water levels at the international boundary. The application was heard by the commission at Bonner's Ferry in the United States on November 6 and 7, 1929, at which hearing representations were made on behalf of the Canadian and United States interests involved. The department's interests were represented by the Director and by the District Chief Engineer of British Columbia. Initial construction work was authorized by the commission and further investigatory work was undertaken in the field, with a view to analyzing further the effects of the proposals upon the drainage interests above and below the international boundary. Following the completion of this work, a further hearing will be held by the commission.

Other problems have been active along the international boundary throughout the year, such as those arising with regard to lake Memphremagog levels, the proposed power development on the Pend d'Oreille river in British Columbia and the effect thereon of the Columbia River reclamation project in the United States. Following arrangements made between the Governments of Canada and the United States an investigation was carried out with respect to the establishment of international gauging stations on the rivers crossing the international boundary from lake of the Woods to the Pacific coast.

The various International Waterway Boards have functioned as usual throughout the year.

In accordance with the order issued on October 4, 1921, by the International Joint Commission in conformity with the provisions of the Boundary Waters Treaty of 1909, the measurement and apportionment of the stream flow in the St. Mary and Milk rivers and their tributaries in the provinces of Alberta and Saskatchewan and in the state of Montana, were continued throughout the past year by an engineer of this service in co-operation with an engineer of the United States Geological Survey. The report covering the year's operations has been prepared and submitted to the commission for review upon the occasion of its regular semi-annual meeting in April.

The Lake of the Woods Convention provided for two boards for the control of the lake levels and the outflow therefrom—the Canadian Board and the International Board. The Canadian Lake of the Woods Control Board has continued the regulation of lake of the Woods between elevations 1056 and 1061 sea-level datum, as elsewhere recorded in this report. The International Lake of the Woods Control Board is called upon to exercise certain responsibilities whenever the lake rises above elevation 1061 or falls below elevation 1056. On March 18, 1930, lake level was drawn below elevation 1056 and the rate of total discharge of water from the lake became subject to the approval of the International Board. On March 31, lake level had ponded at elevation 1055.82.

Under the Convention, the International Board is also charged with the responsibility of approving certain protective undertakings to be constructed on the United States shore of the lake. These works have been approved from time to time as completed.

The International Lake Superior Board of Control continued to exercise its responsibilities with regard to the regulation of lake Superior throughout the year. Records of discharge through the rapids, navigation canals, and power plants on both sides of the river, were systematically reported to the board. The calibration of the sluices of the control dam and of the other outlets was continued. The minimum mean monthly elevation of 602.43 occurred in the month of February, and the maximum of 602.90 occurred in the months of July and August, these stages being well within the limiting range of 602.1 to 603.6 as prescribed in the orders of the commission. The elevation of the lake for January 1, 1929, was 602.84, and the elevation for January 1, 1930,

was 602.41, a net lowering of 0.43 feet during the year. The mean discharge for the year was 65,539 cubic feet per second or about 10,400 c.f.s. less than the mean for 1928.

The International Niagara Board of Control continued its control over the diversions from the Niagara river for power purposes as permitted by Article 5 of the Boundary Waters Treaty. The board is in receipt of continuous hourly records of the withdrawal of water by all power stations on both sides of the river and the control exercised is such as to ensure that the limits of the diversion set forth in the treaty are not exceeded.

The International Massena Board of Control continued to exercise its supervision over the conditions obtaining with respect to the submerged weir in the South Sault channel of the St. Lawrence river and the regulation of flow through the Massena canal in accordance with the order of the International Joint Commission dated December 6, 1922. The board was in receipt of regular monthly reports showing the amount of water diverted and the power house performance from day to day. During the open water season of 1929 the maximum mean daily diversion reported was 25,040 second feet, the minimum 18,700 second feet. The mean daily diversion exceeded 25,000 second feet on one day only. The recorded monthly mean at Lock 21 varied from 201.60 to 203.16. The elevations at the lock were improved by the operation of the submerged weir, the increased height of water surface above natural conditions varying 0.55 to 0.73 feet, which is a decided improvement for navigation conditions.

The International St. Croix River Board of Control continued to exercise its supervision over the discharge of the St. Croix river past Grand Falls dam in accordance with the orders of the International Joint Commission dated November 9, 1915, and October 3, 1923. The board was in receipt of regular reports of the discharge of the river and of the water elevations above and below the Grand Falls dam. No abnormal conditions developed during the year. General satisfaction was expressed by responsible officers with regard to the supply of water on the river below, both for power and for the purposes of fishway operation.

WATER POWER

CANADIAN LAKE OF THE WOODS CONTROL BOARD

The Canadian Lake of the Woods Control Board continued to function throughout the year. The International Board is elsewhere referred to in this report. A complete history of the formation of these boards appears in chapter V of the Annual Report of the Department of the Interior for the fiscal year ended March 31, 1929.

Lake of the Woods Regulation.—During the fiscal year, the inflows to lake of the Woods were below normal and the board was chiefly concerned in conserving storage in order to be able to maintain a dependable rate of outflow for power purposes. Due to deficient precipitation and a high rate of evaporation, lake level was steadily drawn down from elevation 1059.75 on April 1, 1929, to elevation 1056.0 on March 17, 1930. By virtue of the provisions of the Lake of the Woods Convention, when lake level falls below this latter elevation the regulation of the outflow from the lake becomes subject to the approval of the International Lake of the Woods Control Board. Through the courtesy of the United States member of the International Board, arrangements were made to draw the lake level to elevation 1055.80 in order to ensure sufficient water for power purposes at the lake outlets and on the Winnipeg river below during the period preceding the spring break-up. On March 31, 1930, lake level was ponded at elevation 1055.82.

Throughout the fiscal year the board was indebted to the Department of Public Works for run-off records on Rainy and Namakan lakes, and to the Dominion Meteorological Service and the Weather Bureau, United States Department of Agriculture, for precipitation and temperature records at the numerous meteorological stations throughout the watershed.

Lac Seul Regulation.—The Lac Seul conservation dam was completed on May 1, 1919, and arrangements were made that until the matters of foreshore rights and protective works have been settled, the control of the level and out-flow of the lake would remain in the hands of the Ontario Government. During the fiscal year the control of the lake has been in complete co-ordination with the control exercised by the board over the regulation of lake of the Woods.

WATER POWER REGULATIONS AND LEGAL RESEARCH

The Dominion Water Power Regulations were amended by Order in Council of December 3, 1929, which replaced the current wages clause introduced into the regulations in 1928 by a fair wages clause requiring that fair and reasonable rates of pay and hours of labour, to the satisfaction of the Minister of Labour, are to be in force in the construction, alteration, extension, maintenance and operation of the works authorized by a water-power licence. An interim licence under the regulations was issued authorizing the development of the Slave Falls site on the Winnipeg river in Manitoba. The study of Dominion and provincial legislation and jurisprudence relating to the use of water has been continued.

BRITISH COLUMBIA ADMINISTRATION

Water rights granted by the province of British Columbia in the Railway Belt under the provisions of the *Railway Belt Water Act* have been examined for the protection of Dominion interests, and the District Chief Engineer at Vancouver has kept in close touch with the construction operations of the Western Power Company of Canada at Ruskin, on the Stave river, and has made a final inspection of the diversion tunnel and power-house of the Burrard Power Company's Alouette Lake development. Applications for water records for the benefit of Indian reserves in the various parts of the province have been prepared on behalf of the Department of Indian Affairs, and surveys and investigations made in connection with securing water licences and in support of Indian claims to the use of water.

ENGINEERING CO-OPERATION WITH THE DEPARTMENT OF INDIAN AFFAIRS

In Ontario a report was made on repairs necessary at the power dam of the Indian school near McIntosh, and the water supply and sewage disposal plants for the Cecilia Jeffrey Indian school near Kenora were constructed at a cost of \$12,285. In Manitoba reports were made on water supply and sewage systems for Indian schools near Brandon and Birtle, and repairs made to the existing systems at the Brandon school amounting to about \$2,800.

In Saskatchewan additional machinery costing \$1,003 was installed in connection with the water supply of the Onion Lake Indian school, and repairs made to the water supply and sewage systems at Ile à la Crosse hospital at a cost of about \$2,200. In Alberta reports were made on improved water supply for existing schools at St. Bruno on Lesser Slave lake, and at Edmonton, and reports prepared on a site for a new school to be erected near St. Paul de Metis. A deep well was drilled near the site selected at a cost of \$3,398.

In British Columbia a large number of investigations were made in all parts of the province and the local staff of the service also supervised the construction of important improvements made in connection with Indian reserves,

villages and schools. The investigations carried out numbered 32, of which 9 were for irrigation projects and improvements; water supply, 13; electric light and power, 2; water-rights, 2; miscellaneous, 6. There were 21 separate construction projects carried out under supervision, classified as follows: irrigation, 16; water supply, 3; sewage disposal, 1; electric light and power, 1. The total cost of these improvements was about \$44,000.

A more detailed description of this co-operative work will be found in the separate report of this service.

WATER RESOURCES INDEX INVENTORY

The Index Inventory system for recording and collating the water resources data of the Dominion has been in actual use for a number of years and has provided a most efficient method for the referencing, analysis, standardization, and filing of all data relating to the subject of water resources. A detailed description of the system appeared in the annual report for 1916-17 and in the combined reports for the years 1917-18-19.

The system has been applied to practically all phases of the work carried on by the service, among the more outstanding of which may be mentioned the complete census of developed water-power, the analysis of central electric station activities, undeveloped water-power resources, stream measurement activities, and storage investigations.

This work has been largely carried on in co-operation with provincial organizations, notably the Hydro-Electric Power Commission of Ontario, the Quebec Streams Commission, the British Columbia Water Rights Branch, the Nova Scotia Power Commission, and the New Brunswick Electric Power Commission. The data compiled are being continually revised in accordance with the most up-to-date information and, resulting from a number of years of effort, a very large amount of information in standardized form is now available.

WATER-POWER RESOURCES OF CANADA

The most recent analysis places the available water-power throughout the Dominion at 20,347,400 horse-power for conditions of ordinary minimum flow and 33,617,200 horse-power ordinarily available for six months of the year. This analysis takes account of every known rapid, fall, and power site, but cannot be taken as final because there are, particularly on the northern rivers, rapids and falls concerning which there are insufficient data upon which to base estimates of power. In addition, there are opportunities of securing economic heads on rivers of gradual gradient, or possible storage and diversion opportunities, which cannot be appraised until detailed field surveys have been made. Nevertheless, the figures given above probably approximate fairly closely the power available under the conditions of flow stated.

The power ordinarily available for six months of the year may be taken as indicating approximately the combined commercial capacities of the various sites, on the assumption that any deficiency during the remaining six months can be made up from the storage of excess waters, or by the installation of auxiliary fuel power equipment. That this assumption is quite conservative is demonstrated by a study of the power development which has already taken place in Canada, for this reveals that the turbines actually installed in Canada exceed by 30 per cent the six months' power capacity of the developed sites and this installation has already proved to be good commercial practice. If, therefore, the turbine installation continues at the same ratio the present recorded resources will justify an ultimate installation of about 43,700,000 horse-power.

On January 1, 1930, the total turbine installation in Canada had reached 5,727,162 horse-power which, according to the argument just outlined, means that the installation amounts to a little more than 13 per cent of the ultimate capacity and already represents a capital investment of almost \$1,302,000,000 for generation, transmission, and distribution.

An analysis of the present installation indicates that:—

- (1) 4,817,486 horse-power, or 84.1 per cent of the total, is installed in central electric stations for general distribution.
- (2) 578,826 horse-power, or 10.1 per cent, is installed in pulp and paper mills which, in addition, use power purchased from the central electric stations to the extent of approximately 860,000 horse-power, making a total of about 1,439,000 horse-power used in this industry.
- (3) 330,850 horse-power, or 5.8 per cent, is installed in general industrial enterprise, for electro-chemical reduction, mining, manufacturing, lumbering, flour milling and other purposes.

The installation of 584 turbine horse-power per 1,000 population compares very favourably with the installation in other countries and, in an age where the use of mechanical power in industry so largely affects the value of output per worker, makes a substantial contribution to the prosperity of the Dominion as a whole.

The year 1929 saw no slackening in the water-power field; approximately 378,000 horse-power of new installation was brought into operation, whilst the installation of over 3,000,000 horse-power is in active prospect, of which more than one-half is actually under construction. Of the new installation 36,000 horse-power was accounted for by the Ghost development on the Bow river, completed by the Calgary Power Company under interim licence from this department, whilst of the three other developments under construction in the Prairie Provinces under similar licences, that on the Churchill river in Saskatchewan is nearly completed and construction operations at Seven Sisters and Slave Falls on the Winnipeg river are now in full swing.

CENSUS OF THE CENTRAL ELECTRIC STATION INDUSTRY

The generation of electricity for public distribution through the medium of the central electric station industry constitutes the leading use to which Canada's hydraulic development is put. In the year 1900, when electricity was just beginning to come into common use, some 32 per cent of the Dominion hydraulic installation was in central electric stations. Ten years later the percentage had almost doubled (61 per cent), while by 1920 over 71 per cent was devoted to this purpose, growing to over 84 per cent by the end of the year 1929. A number of factors contribute to this continual growth, notably the extensive economic radius of modern electrical transmission combined with the fortunate location of water-powers in relation to centres of population and industry without adequate local fuel supplies. The special adaption of hydraulic power to the operation of central electric stations is emphasized by the fact that for the calendar year 1928, the latest for which definite figures are available, over 98.5 per cent of the electricity generated for sale in Canada originated in the energy of her waterfalls.

The foregoing facts are indicative of the close relationship existing between water-power development and the central electric station industry and are stated as premising the necessity of the annual revision of all basic data relating to the central station industry as a contributory medium to maintaining up-to-date records of our water-power resources.

This revision is made through the agency of the census of the central electric station industry conducted annually by this service in co-operation with the Dominion Bureau of Statistics of the Department of Trade and Commerce, the assistance of the Hydro-Electric Power Commission of Ontario, the Quebec Streams Commission, the New Brunswick Electric Power Commission, the Nova Scotia Power Commission, the Manitoba Power Commission, and other federal and provincial authorities.

The statistics resulting from this annual census are presented to the public through the medium of the annual reports of the Bureau of Statistics, while at longer intervals, depending upon the varying conditions in the industry, a complete directory showing the investment in plant and equipment, installation, mechanical equipment, service, power for sale, rates, and transportation facilities of the individual central electric stations dealt with collectively in the statistical reports of the Census Bureau, is compiled and issued by this service. The first edition of this Directory was issued in 1919 in order to meet the frequent inquiries for detailed information relative to power supply, and the demand for copies was so great that the issue was soon exhausted. Rapidly changing conditions in the industry, and repeated requests for the publication of a new edition, led to a revised edition being issued as of November 1, 1922. Even greater changes taking place in the industry in the period since the publication of the second Directory and a growing demand for up-to-date information, necessitated the issuance of a third edition of the Directory in May, 1929.

DOMINION HYDROMETRIC SURVEY

The Dominion Hydrometric Survey embraces stream measurement work throughout Canada. The records are brought together in one central agency, which attends to the compilation and dissemination of stream flow data, and the survey operates efficiently both as regards office administration and field operations.

In the Prairie Provinces the survey is the direct responsibility of the Dominion Government and in the other provinces the survey is carried on by the Dominion Government under co-operative agreements with the provinces concerned. The Dominion is divided into major drainage divisions, which, together with the district office or offices in charge, are as follows: Pacific drainage, Vancouver; Arctic and Western Hudson Bay drainage, Calgary and Winnipeg; St. Lawrence and Southern Hudson Bay drainage, Ottawa and Montreal; Atlantic drainage, Halifax.

The uses to which the records are put are primarily in connection with water-power development and irrigation projects, and the rapid strides which have taken place in the hydro-electric field are due in no small part to the detailed and extensive records of the regimen of the numerous lakes and rivers of the country which have been made available, by the Dominion Hydrometric Survey, assisted by the voluntary co-operation of the provinces, of private corporations, and of numerous individuals.

Run-off Conditions in Canada.—As set forth in detail in the annual reports of the District Chief Engineers, the average run-off for the year has been generally below average in the Pacific, Arctic and Western Hudson Bay, Southern Hudson Bay, and Atlantic drainages, and above normal in the St. Lawrence drainage.

In the Pacific drainage typical stations showed a range in run-off for the fiscal year from 78 per cent of the long term mean in Bridge river in the Central Fraser River basin to 84 per cent of the long term mean in the Kootenay river at Wardner.

In the Arctic and Western Hudson Bay drainage, typical stations showed a range in run-off for the fiscal year from 6 per cent of the long term mean in Moosejaw creek in southeastern Saskatchewan, to 92 per cent of the long term mean in the Elbow river in central Alberta. In the first week of June torrential rains over the foot-hill areas west of Calgary caused serious flood conditions, and new maximum discharges were recorded in the Bow, Elbow, and Ghost rivers.

In the St. Lawrence and Southern Hudson Bay drainage, typical stations showed a range in run-off for the fiscal year from 88 per cent of the long term mean in the North Maganatawan river, at Burk's Falls, Ontario, to 126 per cent of the long term mean in the Grand river at Galt, Ontario.

In the Atlantic drainage, typical stations showed a range in run-off for the fiscal year from 93 per cent of the long term mean in the Miramichi river in northern New Brunswick, to 107 per cent of the long term mean in the St. Mary river in eastern Nova Scotia.

POWER AND STORAGE INVESTIGATION

During the year only such power and storage investigations involving field studies were undertaken, as were made necessary by requests of organizations receiving co-operative assistance from the service, or by reason of special circumstances. Office studies were continued in the re-analysis and keeping up to date of the records of undeveloped and developed water-power resources in all parts of the Dominion.

In British Columbia an intensive study of the hydraulic features of the Kootenay drainage from the international boundary to a point several miles below Nelson, was continued with special attention being given to the flow in the west arm of Kootenay lake. Co-operative investigations were carried out with a number of hydro-electric organizations in connection with power possibilities on such rivers as the Bridge, Shuswap, Nascall, Dean, Kootenay, Elk, Bull, and a number of streams in the Prince Rupert district, and also on the Campbell and Nimpkish rivers on Vancouver Island. Co-operation was also continued with the city of Vancouver in connection with nearby power streams, with the Greater Vancouver Water District in studies of a metropolitan domestic water supply for the Greater Vancouver area, and with the Vancouver and Districts Joint Sewerage and Drainage Board's investigations. Hydraulic studies were continued of the Fraser river at Hell's Gate, and of the Bridge River canyon at the request of the Department of Marine and Fisheries.

In Alberta a resident inspecting engineer was maintained throughout the construction of the Ghost development on the Bow river, undertaken by the Calgary Power Company under the terms of an interim licence issued by the department. Inspections were made of a number of extensions to the system of the Calgary Power Company in the territory between Calgary and Edmonton, and co-operation was also afforded the company in the investigation of power and reservoir sites in the Bow river basin. Responsibility for the operation of the Lake Minnewanka storage during the filling season was again assumed by the department with satisfactory results.

In the Northwest Territories co-operation was afforded private power interests in the investigation of power possibilities of the Hay, Taltson, and other rivers flowing into Great Slave lake.

In Saskatchewan a resident inspecting engineer was placed during the month of June on the construction of the Island Falls development on the Churchill river, being carried out by the Churchill River Power Company Limited under the terms of an interim licence issued by the department.

In Manitoba, resident inspecting engineers were allocated to look after the department's interests under the terms of interim licences, to develop power at two locations on the Winnipeg river; the first at the Seven Sisters site where construction is being carried out by the Northwestern Power Company Limited, and the second at Slave Falls where the city of Winnipeg is constructing its second development on the river. On the Roseau river a profile was made from the international boundary downstream to the vicinity of Dominion City and other topographical and hydraulic information secured in connection with the reference now before the International Joint Commission.

In Ontario a field survey, using vertical air photographs for the plotting of contours, was made of the Winnipeg river between Keewatin and Boundary falls in connection with the securing of a flowage easement, rendered necessary to permit of probable flood conditions arising from the regulation of the lake of the Woods. Assistance was again afforded the International Lake Superior Board of Control in recalibrating the discharge through the dams at Sault Ste. Marie, and on the Niagara River field, and office studies were pursued in conformity with, and in continuation of, the investigation of the Special International Niagara Board appointed to report upon the preservation of the scenic beauty of Niagara falls. Hydraulic investigations were made of the Abitibi river in the vicinity of the canyon in co-operation with the Abitibi Power and Paper Company, and work was continued in co-operation with the Ontario authorities in the re-analysis of the developed and undeveloped water-power resources of the province, in preparation for the publication of a revised list of these resources.

In Quebec special investigations were made on the St. Maurice river in co-operation with the Shawinigan Water and Power Company, in connection with storage and power development involving a future installation of over 1,000,000 horse-power. Special hydraulic work was also undertaken in co-operation with the Beauharnois Power Company in determining the discharge capacity of the St. Lawrence River channels at Valleyfield. Work was continued in systematically keeping up to date the figures of developed and undeveloped water-power resources of the province.

In New Brunswick, preliminary investigations were made for the towns of Newcastle and Chatham of the cost of developing power at the White Rapids site on the Miramichi river, and special hydraulic studies were carried out at the Great Falls plant of the Bathurst Power and Paper Company on the Nipisiguit river, from which convenient rating curves were prepared.

In Prince Edward Island an investigation was made of a proposed development on the Dunk river near tidewater, with a view to augmenting the supply of power to the town of Summerside; also field studies were made and a report prepared for the village of O'Leary in connection with a proposal to develop power on Mill river.

In Nova Scotia special investigations were made for the Nova Scotia Power Commission in connection with the North East river below Pockwock lake, and the proposed Ingram River-St. Margaret's Bay diversion. Studies were also made, for other organizations, of the Sackville and Herbert rivers. Assistance was given to the Avon River Power Company in connection with its development on the Black river, and to the Chester Light and Power Company in the installation of a new unit in its plant situated on the East river near Chester.

IRRIGATION

Climatic conditions during the early part of the year 1929 were very favourable from an agricultural standpoint, precipitation being sufficient to render soil conditions satisfactory for seeding and germination. Throughout

July and August high temperatures and lack of rainfall caused conditions unfavourable to the growth of non-irrigated crops. Ideal harvesting conditions prevailed until snow fell in early November.

Reclassification of lands in the major projects was continued together with studies of more efficient irrigation methods, including seepage and alkali problems, investigations at the Brooks "Duty of Water" Experimental Station and co-operative studies with the Department of Agriculture. Data were secured relative to the influence of commercial fertilizers on the water requirements, maturity and quality of sugar beets, grains, and alfalfa.

WATER ADMINISTRATION

During the calendar year 1929 there were 36 water licences issued under the provisions of the Irrigation Act and 100 applications for such licences were received. Fur-farming licences to the number of 172 were granted to the provinces of Alberta and Saskatchewan for the use of lakes and other bodies of water for fur-farming purposes, and 63 additional applications for such rights were received. At the end of the year there were 1,062 water licences, 348 fur-farming licences, 22 temporary permits, and 169 authorizations recorded in the department with, in addition, 230 projects under investigation as well as 465 applications for fur-farming privileges.

INSPECTION WORK

Routine field work in connection with the administration of the Irrigation Act, comprising investigations of new applications, surveys, preparation of plans and inspection of operating projects, was continued, together with canal and stream measurements and the study of seepage losses. Field engineers engaged on this work inspected 621 established projects, investigated and surveyed 70 new projects, made 2,084 gaugings of stream and canal discharge, and carried out the usual annual inspections of the major projects and irrigation districts.

GENERAL RIVER CONTROL

Field investigations were made and reports submitted as to flood conditions on the Elbow, Bow, and Highwood rivers. The run-off occurred during the latter part of May and early June and little trouble with floods was experienced after that period.

MAJOR IRRIGATION PROJECTS

Canadian Pacific Railway, Western Section.—During the season 37,390 acres were irrigated, a considerable increase over the previous season. The total cropped area was 223,900 acres, producing crops valued at \$1,707,500, based on the average values in the irrigation districts and representing a per acre return of \$7.63; 17,000 acres of irrigated land were seeded to wheat and produced an average of 10.7 bushels per acre.

Canadian Pacific Railway, Eastern Section.—The acreage irrigated during the season was 78,610, being an increase over the previous season of some 32,930 acres. The total cropped irrigable area was 70,590 acres, of which 34,750 acres were seeded to wheat. No crop returns are available for 1929.

Canadian Pacific Railway, Lethbridge Section.—The irrigated acreage in crop was 18,650, while the total cropped area was 57,850 acres. The total return from the cropped area was \$1,977,300. The major crop was wheat, which represented 58 per cent of the cropped area and produced an average of 28.8 bushels per acre on the irrigated land and 26.4 bushels per acre on the non-irrigated area.

Taber Irrigation District.—The area actually irrigated was 10,090 acres, an increase over the previous season of some 6,920 acres. The total cropped area was 19,900 acres, producing \$606,682, or a per acre return of \$30.48. The principal crop was wheat, representing 46 per cent of the cropped area on irrigable land. The sugar beet area was 3,520 acres, an increase over the previous season of 1,250 acres. The average yield was 8.1 tons per acre and the saccharine content of the beets from all areas averaged 18.2 per cent. The guaranteed price for this crop by the sugar company is \$7.50 per ton.

Canada Land and Irrigation Company.—This company disposed of 1,500 acres during the year and reclassified an additional 6,400 acres. The total area of irrigable land sold is approximately 29,700 acres and, with the 4,500 acres of irrigable land in the New West District, makes a total of 34,200 acres served with water by the company. The acreage irrigated was 25,910 acres, an increase over the previous season of 10,230 acres. The total cropped area was 24,145 acres, producing \$501,240, or equal to a per acre return of \$20.75. The area in wheat was 18,110 acres, producing 321,480 bushels, or 17.7 bushels per acre.

New West Irrigation District.—The area irrigated in this district was 3,180 acres and the total area under crop was 4,180 acres, producing \$59,190, or a per acre return of \$14.16. The major crop was wheat, which represented 80 per cent of the total irrigable area, and yielded an average of 11.6 bushels per acre.

Lethbridge Northern Irrigation District.—An area of 61,230 acres was irrigated in 1929, an increase of 27,790 acres over that served in 1928. The total cropped irrigable area was 61,230 acres, producing \$1,800,000, or a per acre return of \$29.40. The wheat crop amounted to 1,700,000 bushels. No detailed crop census was made during the past season and the above figures were estimated by the district officials. There were thirty new settlers taking up 4,800 acres of land.

United Irrigation District.—The area irrigated was 3,100 acres, while the total cropped area was 29,570 acres, producing \$723,666, or a per acre return of \$24.45. On the irrigated land the area in wheat was 172 acres, producing 5,415 bushels, or a per acre return of 31.4 bushels. The area in wheat on land not irrigated was 20,260 acres, yielding a per acre return of 21.9 bushels.

Magrath Irrigation District.—Some 4,000 acres, or 57.3 per cent of the total irrigable area, was served with water in 1929, but no crop returns are available from this district.

Raymond Irrigation District.—No crop census returns have been submitted by this district, which is supplied with water through the works of the Canadian Pacific Railway Company's Lethbridge section. This (1929) was the third year of operation and the total irrigable area in this district is some 15,130 acres.

Little Bow Irrigation District.—This district, comprising a number of small individual pumping units, diverts water from the Highwood river at the town of High River. The diversion works connecting the Highwood river with the Little Bow river were constructed in 1923, but to date none of the individual schemes have been installed.

Mountain View Irrigation District.—Authorization for the construction of the works was issued in June, 1925, and, although work is proceeding, the project has not yet been completed.

ALKALI TEST PLOTS AT MAPLE CREEK, SASKATCHEWAN

These experimental plots have been carried on for eight years to obtain some reliable data regarding the effect of irrigation on heavy soils with high alkali content. It is proposed to continue the experiments over a further period of two years. No appreciable change has appeared in the fertility of the soil since the inception of this investigation. Results to date in growing wheat have not been satisfactory, but the existing data indicate that alfalfa will in time build up a soil suitable for wheat. At no time has alkali appeared on the surface of the plots.

DUTY OF WATER INVESTIGATIONS

The new projects started on the Brooks "Duty of Water" Experimental Station in 1928 were continued in 1929. The irrigation experiments included time of irrigation and seasonal use of water studies with wheat, oats, barley, corn, sugar beets, potatoes, sweet clover and alfalfa; total water requirements of sugar beets, beans, alfalfa seed and fall wheat; a comparative study of three soil improvement crops including alfalfa, red clover, and sweet clover; super-phosphate tests with wheat and several fertilizer tests with beans, alfalfa seed, corn, and sugar beets. The main controlled factor in these tests was moisture, either natural or applied by irrigation, and in some cases rotation received consideration. Rainfall in this district, except for the early part of the season, was scanty, and the crops were greatly benefited by the application of irrigation water.

A complete report of the 1929 irrigation investigations at Brooks is contained in a separate report of this service.

IRRIGATION EXTENSION WORK

Extension work among the sugar-beet growers of southern Alberta was carried on to secure a more economical use of irrigation water. In each district from three to five beet moisture tests were made every week or ten days during the growing season. At the conclusion of each test or inspection trip, the data secured relative to moisture conditions and irrigation requirements of each field were supplied to sugar company officials, project managers, and beet growers. This information was also published in the local newspapers. The results obtained from this work in 1929 were very encouraging, more farmers each year following the recommendations made as a result of these periodical soil moisture observations. A larger proportion of the beet acreage was irrigated during 1929 than in other years. The summer of 1929 was the driest since the sugar factory has been in operation, but the tonnage harvested was approximately 50 per cent greater than that of the previous year.

DRAINAGE SURVEYS AND INVESTIGATIONS

Under the provisions of the Irrigation Act the control of the surface waters in the provinces of Alberta and Saskatchewan and in the northern part of Manitoba is vested in the Crown in the right of the Dominion. Likewise the unalienated lands in these provinces are under Dominion control. On the other hand, the control of drainage is the responsibility of the provinces. To avoid the complications which were inevitable in the attempt to administer drainage under such conditions of divided jurisdiction, the provinces of Alberta and Saskatchewan entered into a drainage agreement in 1917 with the Dominion Government whereby the procedure looking to the development of drainage

schemes and the purchase of Dominion land reclaimed thereby was greatly simplified. This agreement was subsequently ratified and implemented by the reclamation acts and the drainage regulations of the three governments affected.

For the purpose of administration, drainage is dealt with under three major divisions, viz., small or private schemes, provincial, and Dominion schemes.

SMALL PROJECTS

In Alberta and Saskatchewan settlers may undertake drainage schemes where the area included does not exceed 1,280 acres and when the estimated cost is not in excess of \$5,000. The Department of the Interior furnishes the necessary engineering service free of charge. Sales of reclaimed Dominion land are made at the minimum rate of \$1 per acre. The settlers assume the cost of the reclamation works.

The year 1929 was exceptionally dry and conditions were therefore very favourable for construction work, but unfortunately, some settlers whose schemes had not been completed in accordance with the plans filed, erroneously considered that the required degree of reclamation had been obtained following the temporary lowering of the water-table due to subnormal precipitation conditions, and did not carry out the further necessary work.

Satisfactory crops were harvested on the reclaimed lands, 6,000 tons of hay and fodder being obtained from the schemes in the vicinity of Edmonton, Alberta.

During the year 74 small schemes were inspected, 24 new applications for schemes dealt with, 5 schemes authorized, 2 sales of Dominion lands made, and 15 applications cancelled.

LOW WATER LAKE DRAINAGE PROJECT

The Low Water Lake drainage project, comprising 7,840 acres, situated in townships 50 and 51, ranges 4 and 5, west of the 5th meridian, in Alberta, was authorized prior to 1917, which accounts for the fact that as a private scheme it exceeds the existing size limitation with regard to such schemes. During the past year ten miles of catch-water ditches were constructed in connection with this project, for the purpose of intercepting drainage water from the tributary drainage basin, and preventing the reflooding of the former lake bed which was unwatered several years ago. Thus, pending the completion of additional drainage works, about 1,500 acres of land are protected to a considerable extent and rendered productive.

PROVINCIAL PROJECTS

These drainage schemes are generally quite large and affect a considerable number of settlers. They are organized under the provincial drainage acts and comprise districts in which most of the land affected is privately owned. The construction funds are raised by the sale of debentures which are secured by the assets of the settlers whose lands are included. The debentures are retired ultimately by a fund realized through annual contributions in the form of drainage taxes by the settlers in the scheme. The taxes are proportionate to the benefits resulting to the lands through drainage.

Dominion lands reclaimed by these schemes are sold to the provinces at the rate of \$1 per acre. These lands are resold and the proceeds applied to reduce the drainage taxes.

In Alberta five such schemes have been carried out, while in Saskatchewan twenty-six have been completed.

Owing to the dry conditions of the past year, there was little demand for comprehensive drainage. In Saskatchewan, however, Mildred Drainage District No. 29 was completed at a cost of \$11,000, and the Yellow Grass Drainage District ditches were cleaned out and improved at a cost of \$50,000. The

possibility of forming a provincial drainage district in the vicinity of Kronau, Saskatchewan, was investigated, but it was found not to be economically feasible. Apart from the usual maintenance work in connection with the existing schemes, no new provincial projects were carried out in Alberta.

DOMINION PROJECTS

When more than 50 per cent of the area in a proposed scheme is unalienated land the Dominion Government may undertake the drainage work. In such cases the entire cost of the project is borne in the first instance by the Dominion, the cost being recouped subsequently by the sale of the reclaimed Dominion lands. One scheme was carried out some years ago in the province of Saskatchewan. During the past year no new projects of this character were undertaken.

MANITOBA DAIRY FARMS LIMITED

There is no drainage agreement between the Dominion and the province of Manitoba. Any schemes in Manitoba, affecting Dominion interests, are dealt with by direct negotiations between the two Governments.

Western Project.—The Manitoba Dairy Farms Limited obtained a lease in 1927 of 9,700 acres of Dominion land in townships 4 and 5, range 9, east of the Principal Meridian, for reclamation by drainage. During the past year the company constructed additional ditches and carried on operations in connection with the clearing of the reclaimed land. Inspections of the project were made from time to time by engineers of the department in conjunction with officers of the provincial Government.

Eastern Project.—This scheme, situated in townships 3 to 10, ranges 9 to 14, east of the Principal Meridian, is still in the preliminary stage and has not yet been authorized by the provincial and Dominion governments.

ROSEAU RIVER FLOOD PREVENTION AND RECLAMATION PROJECT

With the object of devising a scheme to prevent flooding and to furnish adequate drainage facilities in the Roseau River drainage basin in Canada, a field investigation was carried out in the season of 1929 in the area contained in townships 1 to 3, ranges 6 to 14, east of the Principal Meridian. Topographical data were obtained, levels run for 967 miles and 81 square miles plane-tabled. Soundings were taken of all swamps affected, hydrometric records systematically continued, and soil samples collected from the lands susceptible of reclamation. Numerous cross sections were made of the Roseau river between the international boundary and its mouth. Maps of the area investigated are now under preparation and will show, in addition to the principal physical features and the limits of the watershed, contours to two- and five-foot intervals, the former for the lands subject to direct flooding from the Roseau river. When the maps are completed flood remedial and drainage schemes will be projected and designs and cost data prepared in detail.

FUR FARMING

Agreement was reached between the provinces of Alberta and Saskatchewan and the federal Government as the result of which vacant and available Dominion lands containing marsh and water areas suitable for fur-farming purposes are leased to these provinces free of charge. These lands then become available for re-leasing by the provinces under their regulations in that regard. During the past year ninety-four leases were issued by the department for an area of 33,346 acres. The total area covered by the leases issued to date is 184,930 acres.

VI

NORTH WEST TERRITORIES AND YUKON

REPORT OF THE DIRECTOR, O. S. FINNIE

GENERAL

Not since the days of the Klondike gold rush has there been so much interest manifested in Northern Canada as during the past fiscal year. Many factors have combined to create this attitude in the public mind. The general northward trend of development has rolled back the Canadian frontier beyond the provincial boundaries. The amazing strides accomplished in the use of aircraft for exploration and mineral prospecting have made possible the reaching of regions heretofore practically inaccessible. The revival of Arctic and Antarctic exploration; the proposals to establish international air routes between Europe and America by way of Greenland and other Arctic islands; and the quest for northern furs, minerals, and other natural resources have aroused a widespread desire for greater knowledge of our far northern possessions.

It is the responsibility of the North West Territories and Yukon Branch to meet the public need in this respect, and to carry out the governmental policy of broader development activities. Its work, consequently, has been greatly increased in scope. In administration, exploration and dissemination of knowledge, the Branch has had an unusually active year. The scope of its work embraces all Department of the Interior matters, with the exception of mining, pertaining to the Northwest Territories and Yukon.

Wild Life Division.—The work of this division is carried on under two sub-divisions. One deals with the administration of the *Northwest Game Act* and the native game preserves, and the other with the administration of the *Fur Export Tax Ordinance*, and the payment of wolf and coyote bounties. A summary of the year's activities in these connections is contained in a statement appearing in the section devoted particularly to the Northwest Territories.

Lands and Records Division.—The work of this division has to do with the administration of Crown lands and timber in Yukon and Northwest Territories. A considerable amount of Branch correspondence was handled during the year by this division. Particulars regarding disposal of lands and timber are shown separately for the Northwest Territories and Yukon, in paragraphs that follow under their respective headings.

Engineering Division.—The office work of this division consisted largely of consolidating the field notes obtained by the various explorers and investigators employed in northern research, and the compiling and drafting of maps, charts, sketches, and weather charts for publication. Survey field notes were also calculated, checked, and plotted; buildings and boats were designed and drafted; areas calculated and technical descriptions of lands prepared, including descriptions of the mining divisions of the Northwest Territories. There was also the distribution of maps for publicity purposes, plotting leases and homesteads in Yukon Territory, and the preparation of licences for trading posts and for scientists and explorers, and of commissions for coroners, justices of the peace, and notaries public.

Supplies.—During the past year complete building material, equipment and supplies for doctors' residences at Aklavik, Coppermine, and Chesterfield were selected, requisitioned, and shipped. Specially designed boats for northern travel were secured also. Considerable supplies and equipment were furnished to mission schools and hospitals throughout Mackenzie District.

Library and Museum.—The Branch is gradually building up a very extensive and valuable Arctic library consisting of books, photographs, coloured lantern slides, and reels of motion picture film. It is accumulating also a collection of mineral, botanical, and other natural resources specimens drawn from Yukon and the Northwest Territories gathered principally by its own field officers. To this collection are being added many typical specimens of native workmanship—both Indian and Eskimo—in skins of animals, ivory, and other material, as well as relics of early exploratory expeditions and articles of archaeological and ethnological interest.

The library at the end of the year contained about 900 volumes, nearly all relating to Arctic exploration and development. Some of these works are original editions long since out of print and are very valuable and useful. During the year about thirty books were added. The library contains also over 7,000 photographs (of which 1,329 were added during the year), 1,000 coloured lantern slides, and a few reels of motion picture film. One of these reels is a very excellent motion picture of a band of musk-oxen on their native grazing grounds on Devon island, Eastern Arctic. It was secured by the Branch's photographer who accompanied the Annual Arctic Expedition of 1929.

FIELD INSPECTION BY THE DIRECTOR

During the year a field inspection of the Mackenzie District and of Yukon Territory was made by the Director of the Branch, Mr. O. S. Finnie. The many changes taking place in the North demand constant revision of administrative matters and policy, and the Director's trip was for the purpose of securing first-hand information of these changes and of discussing personally with various local spokesmen the advantages or disadvantages of certain proposed or requested changes in administration.

The Director left Ottawa on July 13, and travelled by rail via Edmonton, to the end of steel at Waterways, Alberta, thence by steamboat down the Athabaska and Slave rivers to Fitzgerald, from which point a sixteen-mile motor trip took him across the portage to Fort Smith, headquarters for the Government in the Northwest Territories.

Mackenzie Inspection.—From Fort Smith Mr. Finnie proceeded down the Mackenzie river by steamboat, visiting all settlements along the way as far as Aklavik. At each point of call frank discussions of the merits of new laws and suggested laws were encouraged, and careful notes were made of the suggestions offered by residents.

Flight from Aklavik to Dawson.—Having completed investigations in the Mackenzie valley, Mr. Finnie travelled by aeroplane from Aklavik to Dawson where inspection of affairs in Yukon Territory was commenced. This flight was an epochal one in the North, pioneering flying operations between the Mackenzie and the Yukon. The route followed was the old Mackenzie-Yukon route of Klondike days. From the Mackenzie delta the plane went by way of the Rat river to the Richardson mountains, crossed these mountains by way of McDougal pass and then followed the Bell and Porcupine rivers to Fort Yukon, Alaska, from which place the Yukon river was followed in an up-stream direction to Dawson. The trip was made in a single non-stop flight of six and one-half hours. The total distance flown was about eight hundred miles. The significance of

aerial transportation in the North may be realized when it is recalled that a month was formerly considered good time for making this trip by canoe and steamboat.

Yukon Inspection.—Inspections in Yukon Territory were continued at Mayo, Keno, Carcross, and Whitehorse. Again the aeroplane was used with remarkable time-saving advantages in travelling between Dawson and Mayo, and between Mayo and Carcross. Many matters of vital interest were discussed at points of call.

The Director returned by way of the Pacific coast and Vancouver, reaching Ottawa on September 20. The whole trip involved nearly 9,000 miles of travel.

PUBLICATIONS

To meet the demand for information respecting Government activities in the Yukon and Northwest Territories as well as for authentic data concerning their resources, climate, and other phases, the Branch issued during the year a number of publications. These, with a single exception, were written by its own officials who have had wide experiences in research and actual field investigations. Included are original reports of specific explorations and field examinations. The publications prepared and issued during the fiscal year were:—

Yukon—Land of the Klondike.—A 48-page, profusely illustrated booklet, with cover in colours, setting forth the attractions of the Yukon as a tourist objective and summarizing its resources. (Two editions).

The North West Territories, 1930.—A 137-page pamphlet with illustrations and maps, being a concise compendium of the Department's most accurate information on the extent, topography, population, resources, climate, transportation facilities, and Governmental organization of the Northwest Territories.

Reindeer Grazing in Northwest Canada.—A 46-page pamphlet, with illustrations and map, being the report of an investigation of pastoral possibilities in the area from the Alaska-Yukon boundary to the Coppermine river.

Southern Baffin Island.—A 130-page pamphlet, with illustrations and maps, being an account of exploration, investigation and settlement during the past fifty years on the southern part of Baffin island.

Discovery of the Breeding Grounds of the Blue Goose, 1929.—A short account, illustrated, of the discovery of the breeding grounds of the blue goose on Baffin island.

Coronation Gulf Copper Deposits.—A short report, illustrated, of an inspection during the year 1928-29, of the known mineralized areas in Coronation Gulf and Bathurst Inlet districts.

Preliminary Report on the Aerial Mineral Exploration of Northern Canada.—A 32-page pamphlet, with illustrations and maps, dealing briefly with the aerial operations of 1928 and 1929 and the added knowledge of the country obtained through these activities.

Regulations Respecting Game in the Northwest Territories.—A 44-page pocket bulletin containing information respecting game laws, wolf and coyote bounties, and the fur export tax.

These publications have proved exceedingly popular. A 15,000 edition of the Yukon booklet was quickly exhausted and a second edition of 15,000 was issued. Many requests were received for more complete reports of field investigations and the preparation of a number of these was begun.

In addition to the above mentioned publications, a number of articles dealing with explorations and developments in the North were prepared for publication in various scientific journals and for lecture purposes.

NORTHWEST TERRITORIES

NORTHWEST TERRITORIES COUNCIL

Personnel of Council.—The Northwest Territories Council is constituted as follows:—

Commissioner—W. W. Cory, C.M.G., Deputy Minister, Department of the Interior.

Deputy Commissioner—R. A. Gibson, Esq., Assistant Deputy Minister, Department of the Interior.

Members of Council—Charles Camsell, LL.D., Deputy Minister, Department of Mines; O. S. Finnie, B.Sc., Director, North West Territories and Yukon Branch, Department of the Interior; H. H. Rowatt, Esq., Dominion Lands Board, Department of the Interior; D. C. Scott, Litt. D., Deputy Superintendent General, Department of Indian Affairs; Colonel Cortlandt Starnes, Commissioner, Royal Canadian Mounted Police.

Meetings of Council.—During the year seven meetings were held. At these a number of important matters were dealt with, including the redrafting of the game regulations, the consideration of grants for the protection of native orphan children and for assisting the carrying on of hospitals and schools, the establishment of permanent radio stations, and the organizing of a system of fire-rangings and game protection by wardens. New ordinances concerning the fur export tax, legal time zones in the Territories, and Eskimo ruins were passed, and careful consideration given to the draft of the Revised Ordinances of the Northwest Territories.

ANNUAL ARCTIC EXPEDITION

The annual patrol by ship to the Arctic archipelago was carried out. The expedition sailed on the ss. *Beothic* from North Sydney, Nova Scotia, on July 20, having on board 44 persons in all, 36 officers and crew and 8 members of the expedition. In addition to the usual quota of supplies for the northern posts the ship carried building material for the construction of a residence and warehouse for the medical health officer at Chesterfield.

Members of Expedition.—The members of the expedition comprised Mr. G. P. Mackenzie, Officer in Charge; R. S. Finnie, Secretary; Mr. P. A. Taverner, Ornithologist of the National Museum staff; Dr. H. A. Stuart, Medical Officer of the Department; and four constables of the Royal Canadian Mounted Police, going North to relieve others coming out at the end of their tour of duty. Captain E. Falk, was Ship's Master and Captain L. D. Morin was Ice Pilot.

Call at Godhavn, Greenland.—The expedition reached Godhavn, North Greenland, on the morning of July 27. Godhavn, the capital of North Greenland, is an interesting settlement. The Danish officers here extended every kindness and courtesy to the members of the expedition. Acting Governor Berthelsen with Mrs. Berthelsen and other prominent Danish officers conferred with the Officer in Charge on matters of mutual interest in the North, and dined on the ship. A continuous moving picture show of pictures taken on the previous voyage of the *Beothic* was given for the entertainment of the members of the colony.

Supplies Landed at Dundas Harbour.—The expedition left the same evening for Dundas harbour, the next port of call. The ice conditions in Baffin bay were more favourable than in former years so that, without undue incident, the anchor was dropped in Dundas harbour at 11 p.m. of the 30th. All were well at the post. It was learned that Inspector A. H. Joy, had made this detachment his headquarters for the year. On March 12, accompanied by

Constable Taggart and the Eskimo, Nookapiungwah, he had left on a long patrol to Melville island and had not since been heard from. The Inspector, however, had left word at the post that if he had not returned to Dundas Harbour at the time the ship arrived he would be either at Craig Harbour or Bache Peninsula.

Moving Pictures of Musk-oxen.—By noon of July 31 all freight was landed and departure was taken for Craig Harbour. As the weather was fine and clear, on coming into Jones sound it was decided to proceed to cape Sparbo on the north side of Devon island for the purpose of securing moving pictures of musk-oxen known to be in that vicinity. At 7.30 on the morning of August 6 the anchor was dropped five miles off cape Sparbo, which is as near as a ship can approach on account of dangerous shoals. A party went ashore in the motor-boat and pictures of the musk-oxen were secured.

Supplies for Bache Peninsula Landed.—On the evening of the same day the expedition reached Craig Harbour, only to learn that Inspector Joy and his party had not reached that post. Departure was taken immediately for Bache Peninsula. An effort was made to take the ship through Glacier strait, only to find the eastern end of the strait blocked with ice, necessitating returning and going around the southern side of Coburg island. Much heavy ice was encountered in Smith sound south of the Cary islands. North of these islands, however, more open water was encountered until in the vicinity of Rice strait, when very heavy ice was again met with.

The anchor was dropped in Fram haven in the early morning of the 3rd. Inspector Joy and party, as well as Corporal E. Anstead and the two constables of the Bache Peninsula detachment, were here awaiting the arrival of the ship. All were well. The inspector had made a very successful patrol. The police reported that ice conditions in Buchanan bay were such that it would be impossible to reach the post with the ship. An investigation by the ship's officers confirmed this view. It was, therefore, decided to land the supplies for Bache Peninsula at cape Rutherford, which is on the south shore of Buchanan bay and about twenty miles from the post. The transfer of the supplies by motor boat, if conditions later in the season permitted, and if not, by dog-team in the winter, presented no very difficult problem for the police at the detachment, well equipped as they are for either means of transport.

All supplies were safely landed and the anchor weighed in the early morning of the 4th. The return was made around the north of Pim island. Fog and ice conditions made the passage across to Etah difficult. It was the intention to land here Dr. H. K. E. Krueger and his assistant, Mr. A. R. Bjare. Dr. Krueger is a distinguished German scientist who, by arrangements previously made, was transported on the *Beothic* from Godhavn to Etah. The few native families that usually make their headquarters at Etah had gone south to Robertson bay. Dr. Krueger and his assistant were, therefore, put ashore at Nerik settlement in Robertson bay on the afternoon of the 4th and departure was taken immediately for Dundas Harbour.

Return to Pond Inlet.—The passage south to Dundas Harbour was rendered particularly difficult because of dense fog and snow squalls. Dundas Harbour, however, was safely reached at noon on the 6th. Shortly after midnight the ship was again under way for the next port of call, Pond inlet, which port was reached at midnight of the 7th after a rather stiff contest with the ice in Eclipse sound. All were well at the post. Unloading was started shortly after the anchor was down and was carried on with considerable difficulty on account of the ice which was then moving in great quantities down the inlet to the open sea.

Southern Baffin Island Posts Visited.—Departure was taken for River Clyde the evening of August 8. Almost continuous fog and very severe ice conditions for the first hundred miles south of Pond Inlet made progress slow. Numerous polar bears were seen on the ice in this vicinity, but the atmospheric conditions were such that only fair moving pictures were secured. The ship arrived at River Clyde at noon of the 10th and left again at 5 p.m. of the same day for Pangnirtung.

In making the voyage south from River Clyde it was necessary to go more than one hundred miles off the coast to avoid very heavy ice nearer the land. On the morning of the 12th the pack was cleared, but heavy ice was met again at the entrance to Cumberland gulf. Only scattered ice was in the gulf, however, and without much delay on this account the expedition arrived at Pangnirtung at 4.30 p.m. of the 13th. All were well at the post. Unloading was started the same evening and was finished at early morning of the 15th.

Departure was taken immediately for Lake Harbour. A southeast gale created a very heavy sea which breaking over the ship smashed two of the boats used for landing cargo. Because of the fog conditions it was not possible to get an observation or bearing after leaving Pangnirtung until off the Hudson strait where a bearing was obtained from the Direction Finding station at Cape Hopes Advance. Advantage was thus taken of this wonderful aid to modern navigation. The anchor was dropped at Lake Harbour at 4.30 p.m. of August 17 and unloading was started immediately. Everything was landed and departure taken for Chesterfield inlet at 2.30 p.m. of the 18th.

Call at Chesterfield.—No ice of any consequence was encountered on the run to Chesterfield. A thick fog necessitated anchoring off Chesterfield for twenty-four hours before it was deemed safe to attempt an entrance to the harbour. The anchor was dropped at 10 a.m. of September 2. All freight was landed by the afternoon of the 3rd and departure immediately taken for Lake Harbour. Mr. W. H. B. Hoare, investigator for the Department, was taken aboard at Chesterfield.

On arrival off Coats island, the weather being fine, the Officer in Charge and party went ashore in the motor boat in the vicinity of Cary's Swan Nest. Several hours were spent in this part of the island securing specimens of vegetation with a view to assisting in determining the suitability of this island for reindeer.

Mr. J. Dewey Soper, investigator for the Department, joined the ship, according to arrangements previously made, off the entrance to Lake Harbour. The voyage was continued on to Resolution island, where the Marine Department was establishing a direction finding station. The ss. *Armora* and the ss. *Sambro*, carrying equipment and supplies for that work, were at anchor at Acadia cove and Captain Hearne of the *Armora* came out in a launch to pilot the *Beothic* through the very narrow entrance to the harbour.

Return of Expedition.—At 5 p.m. of August 28 departure was taken for Port Burwell and because of the very thick fog in the strait it was not possible to make the harbour until 11 p.m. of the 29th. The freight for the post was quickly landed and the start on the last leg of the voyage home made at 7 p.m. of the same day. The last few days of the voyage home to North Sydney were uneventful, that port being reached at 9.30 a.m. of September 3.

FIELD INVESTIGATIONS

Continuation of Previous Year's Work.—On April 1, 1929, the Branch had in the field the following investigators,—Messrs. L. T. Burwash, G. H. Blanchet, W. H. B. Hoare and J. Dewey Soper. Mr. Burwash had wintered on King William island and Boothia peninsula where he had been carrying on work in

connection with magnetic observations and Eskimo investigations. Mr. Blanchet had wintered at Tavane on the west coast of Hudson bay, having been attached as observer to one of the aerial mineral prospecting parties investigating Keewatin District. Mr. Hoare had spent the winter in Thelon Game Sanctuary making investigations respecting musk-oxen and caribou, and Mr. Soper had wintered on Foxe peninsula where he had carried out extensive topographical surveys and wild life investigations.

Investigations by Mr. L. T. Burwash.—On April 1, 1929, Mr. Burwash who had wintered in the field continued his investigations in the vicinity of King William island. During April a trip was made from Gjoa haven to the magnetic pole where observations for magnetic declination, vertical dip, and total intensity were made. Other magnetic observations were made at Kent bay, cape Victoria, and Oscar bay. On May 17 the winter camp at Gjoa haven was abandoned and a trip by dog-team was undertaken with Coronation gulf as its objective. Wilmot island, which lies in the easterly section of Coronation gulf, was reached on June 16 where an examination of the copper-bearing rocks in this area was completed. A trip covering the known mineralized areas of Coppermine river was made and several deposits of native copper were examined.

Investigations by Mr. G. H. Blanchet.—During the years 1928 and 1929 Mr. Blanchet was in Keewatin District making special investigations in connection with the mineral explorations being carried on there by a number of private companies. During the winter of 1929-30 he prepared reports on his investigations.

Investigations by Mr. W. H. B. Hoare.—During the spring and summer of 1929, Mr. Hoare completed his investigations in the Thelon Game Sanctuary. He then travelled to Chesterfield, where he met the ss. *Beothic*, carrying the annual Arctic expedition of the Department of the Interior, and returned by it to Ottawa.

Investigations by Mr. J. Dewey Soper.—On April 14 Mr. Soper completed his program of surveys of Foxe peninsula and returned to his headquarters at Cape Dorset. On May 17 he set out from Cape Dorset in search of the breeding grounds of the blue goose, which, after many days' hard travelling, he was successful in discovering. The location of these grounds is near Bowman bay on Baffin island, and their final discovery solved a problem which has long baffled ornithologists. Returning to Cape Dorset, an additional voyage of 365 miles was made to connect with the ss. *Beothic*, on which Mr. Soper returned to Ottawa.

Investigations of Mr. A. E. Porsild.—During June and July, Mr. Porsild, special investigator for the Branch, made a botanical examination of Charlton island in James bay, part of Akimiski island, and parts of the Twin islands, with a view to ascertaining wild life conditions.

FIELD SURVEYS

Surveys by Mr. F. H. Kitto.—During the summer Mr. F. H. Kitto, D.L.S., was sent to Charlton island, James bay, to make a settlement survey at House point, where, for over 200 years, the deep sea-going vessels of the Hudson's Bay Company have discharged their cargoes. A tract of land extending along the shore for a distance of about a mile on either side of the landing place and having an average depth of about half a mile was surveyed out into eight lots, and a small piece of land used as a burying place was posted out as a cemetery.

Surveys by Topographical Surveys Branch.—By request, the Topographical Surveys Branch made a number of surveys along the Mackenzie river. At Fort Smith the hill road was surveyed to the waterfront and a number of subdivisions

were made in the settlement. RetrACEMENTS and subdivisions were made at Good Hope and McPherson. A settlement survey of the entire Arctic Red River settlement was completed and a lot for a cemetery was laid out at Aklavik.

FIELD MEDICAL SERVICE

Pangnirtung.—Dr. L. D. Livingstone, Chief Medical Officer of the Branch, who was in residence at the Pangnirtung medical headquarters, returned to Ottawa in the fall of 1929 on the ss. *Beothic*. He was replaced by Dr. H. A. Stuart, who will have charge of medical affairs on Baffin island. Extensive patrols made by both Dr. Livingstone and Dr. Stuart brought them in contact with nearly all the natives of the Eastern Arctic. The general health of the Eskimos was found to be good and their living conditions satisfactory. Numbers of patients were given medical treatment and considerable surgical work was performed at headquarters.

Aklavik.—The medical station established by the Branch at Aklavik was in charge of Dr. J. A. Urquhart throughout the year. Owing to the lack of a suitable boat for summer travel, the medical officer was unable to cover as much territory as desired, but several winter patrols were made by dog-team. Arrangements have been perfected for the supplying of a suitable boat. Aklavik station serves particularly the needs of the Mackenzie Delta Eskimos and the few Indians that inhabit that region. The general health of the natives, both Eskimo and Indian, was somewhat better than during the previous year and no epidemics of any sort occurred in the district.

Establishment of Medical Station at Coppermine.—During the year a medical base was established at the mouth of the Coppermine river, and Dr. R. D. Martin was appointed to take charge of it. This base is designed to serve the natives of Coronation gulf, those westward as far as the territory served by the Aklavik depot, and eastward as far as circumstances permit. Materials for the necessary building, medical equipment, and supplies were shipped from Vancouver by the Hudson's Bay Company's ship, the *Baychimo*, and were safely delivered. Dr. Martin reached the Coppermine on August 23, and immediately took charge of the erection of a house and warehouse which were completed by the middle of October. Several patrols were made during the fall and winter by dog-team, and a number of natives were given attention.

Establishment of Medical Station at Chesterfield.—During the year arrangements were perfected for the establishment of a medical station at Chesterfield in Keewatin District. The construction of a doctor's residence was commenced under a contract. In March, Dr. L. D. Livingstone, Chief Medical Officer, who was selected to supervise the opening of this station, left Ottawa by train for Churchill from which point he proposed to travel by dog-team along the coast to Chesterfield.

Co-operation with the Department of Indian Affairs.—By a co-operative arrangement with the Department of Indian Affairs, three medical officers of that department act also as medical officers for the North West Territories and Yukon Branch. These officers were stationed at Fort Smith, Resolution, and Simpson.

Assistance to Mission Hospitals.—Financial assistance and medical supplies were given as usual to the hospitals that are maintained by the Anglican and Roman Catholic missions at Fort Smith, Hay River, Simpson and Aklavik. All hospitals were in charge of trained nurses.

VITAL STATISTICS

The Director is the Registrar General of Vital Statistics and is responsible for the recording of births, marriages, and deaths for the whole of the North-

west Territories. It is satisfactory to note that the last fiscal year compares very favourably with other years, as regards the general well-being of the native population.

FORT SMITH AGENCY

District Office.—The local office at Fort Smith was in charge of District Agent J. A. McDougal. His duties included those of Mining Recorder, Dominion Lands Agent, Crown Timber Agent, Superintendent of Wood Buffalo park and Chief Fire Warden. He also acted as Postmaster under the Post Office Department and had charge of wharves and aids to navigation for the Department of Marine and Fisheries.

Wood Buffalo Park.—The District Agent, in his capacity as Superintendent of Wood Buffalo park, has a staff consisting of a park warden and twelve game wardens.

ADMINISTRATION OF THE NORTHWEST GAME ACT

Because of the length of time involved in receiving returns at Ottawa from outlying trading posts, it is impossible to compile complete statistics of the fur trade for the past fiscal year for inclusion in this report. The fur returns for the fiscal year 1928-29 are given below, but, unless specifically stated otherwise, the general information refers to the fiscal year ending March 31, 1930.

The fur returns for 1928-29 showed a further slight decline in several species of fur bearers. There was, however, a marked increase in the number of muskrats taken. This, together with the increased value of the pelts of other animals, accounts for an increase in the value of the total yield by over \$100,000 as compared with the value of the fur yield of 1927-28. The following statement shows the number of pelts secured during the license year 1928-29:—

STATEMENT of pelts of fur-bearing animals traded under licences, or surrendered for bounty or under special regulation, during the licence year 1928-29, in the Northwest Territories.

	Mackenzie District	Keewatin District	Franklin District	Total
FUR-BEARERS				
Bear, black.....	133	3	11	147
“ grizzly.....		1		1
“ not specified.....	17	1	1	19
“ white.....	23	73	127	223

“ (surrendered for bounty).....				
BIG GAME				
Caribou.....	120	296	29	445
Moose.....	114	19		133

There was a close season on beaver in the Mackenzie District during 1928-29. The 970 beaver pelts listed above as traded, represent pelts held over by traders from the previous season and pelts secured in Keewatin District. The other 2,391 pelts were those of beaver taken by Indians and Eskimos under special regulation and surrendered to the Government.

Protected birds reported as taken under licences include 942 ducks, 43 wild geese, 343 grouse, 672 ptarmigan, and 87 prairie chickens.

Buffalo.—The warden service of Wood Buffalo park was maintained at full strength throughout the past year. It is estimated that there are now about 10,000 buffalo in this area. The herds wintered well and those animals recently transported from Buffalo national park at Wainwright, Alberta, and liberated with the native animals appear to be firmly established in their new habitat. A few aged buffalo, outcasts from the different herds, were slaughtered and the meat was distributed among needy native families, native boarding schools, and hospitals in the adjacent areas.

Musk-ox.—The original large herds of musk-oxen which formerly roamed over the northern part of Canada have been so reduced that now, according to the latest estimates, approximately only 13,000 remain, the majority of which are to be found on the islands north of the mainland. Reports of Branch field officers indicate that there are about 250 musk-oxen in the Thelon Game Sanctuary. These animals are fully protected.

Caribou.—Large herds were observed in the tundra area north and east of Great Slave lake by field officers of the Branch as they were returning by aeroplane from Bathurst inlet last fall. This was evidently the usual seasonal migration of the herds in this part of the North.

Beaver.—The Order in Council providing for a close season for beaver in the Mackenzie District was modified to enable needy Indians and Eskimos to take a limited number for food during 1928-29, conditional on the pelts being surrendered to the Government, in exchange for which credit at local trading posts was given. The returns indicate that 2,391 beaver were taken under this authority. The regulation providing a total close season on beaver in the Mackenzie District is now being enforced.

Muskrat.—The number of muskrat skins traded increased from 154,648 during 1927-28 to 248,081 during 1928-29. It would seem that the muskrat cycle has now reached its highest peak. These animals are reported to be very numerous in the Mackenzie delta. This large area is a splendid muskrat habitat and the field officers report that the large number of pelts taken from that area during the last hunting season has made no apparent decrease in the muskrat population, and that it is doubtful if the number taken was equivalent to the natural increase.

Wolf.—During the year 1928-29 warrants were issued covering the payment of bounties at the rate of \$30 per animal for the destruction of 1,040 wolves. This bounty is paid upon the surrender of the wolf pelt to the Crown by the person who kills the animal. In addition to the above, 185 wolf pelts were sold to traders, making a total of 1,225 wolves destroyed during the year 1928-29. This is a decrease as compared with the figures shown for the previous year and might indicate that the new system of payment of bounty has encouraged the hunters to greater activity and that the number of wolves in the Northwest Territories has already been materially reduced. The pelts surrendered to the Government for bounty were sold by auction in Montreal.

Coyote.—On March 11, 1929, Order in Council No. 418 was passed authorizing payment of \$15 bounty on each coyote killed in the Northwest

Territories and in that portion of the province of Alberta within the boundaries of the Wood Buffalo park, conditional on the pelt of the animal being surrendered to the Crown. This order became effective on July 1, 1929.

Revenue

The revenue collected under the *Northwest Game Act* for the fiscal year 1929-30 was as follows:—

Hunting licences.. . . .	\$18,952 95
Trading licences.. . . .	7,373 10
Bird licences.. . . .	55 00
Fur Farm licences.. . . .	37 00
Trading Post permits.. . . .	43 00
Sale of wolf pelts.. . . .	39,465 60
Fur Export tax.. . . .	758 70
Fines and forfeitures.. . . .	75 00
Total.. . . .	<u>\$66,760 35</u>

This is an increase of \$15,619.31 over the amount received during the previous year.

Licences.—Returns showing the issue of the following licences were received during the fiscal year 1929-30:—

	Number
Hunting: Resident.. . . .	309
Non-resident British.. . . .	192
Non-resident non-British.. . . .	50
Trading: Resident.. . . .	142
Non-resident British.. . . .	39
Non-resident non-British.. . . .	6
Game Bird licences.. . . .	11
Fur Farm licences.. . . .	8

Violations of Act.—There were six prosecutions for violation of the *North-west Game Act* and three convictions during the year 1929-30.

PERMITS

Permits were issued or dealt with as indicated below:—

Purpose	Number
To establish trading posts.. . . .	30
To take and export mammals for propagation purposes.. . . .	3
To take mammals for propagation purposes during the open season (issued to holders of fur-farm licences).. . . .	10
To trap and hunt fur-bearers, other than buffalo, in Wood Buffalo park.	312
To render <i>Migratory Bird Act</i> permits operative in the Northwest Territories (countersigned).. . . .	15
To take specimens of mammals and non-migratory birds for scientific purposes.. . . .	8
To import liquor for medicinal purposes.. . . .	435
Explorers and Scientists permits—to permit the holder to enter the Northwest Territories for exploration or scientific purposes.. . .	8

FUR EXPORT TAX ORDINANCE

The Fur Export Tax Ordinance was assented to by the Commissioner in Council of the Northwest Territories on May 7, 1929. It provides for the collecting of a tax on furs exported from the Northwest Territories and became effective on December 31, 1929. Up to March 31, the end of the fiscal year 1929-30, the amount of tax collected under the provisions of this ordinance was \$758.70. The furs on which this tax was levied were nearly all exported by aeroplane as the regular seasonal movement of furs since the tax became effective had scarcely commenced.

WOOD BUFFALO PARK

The warden service was maintained at full strength throughout the year. The several wardens who patrol the park estimate that the annual increase of the buffalo is from twenty to twenty-five per cent, and report that the animals are in excellent condition. Slight damage has been reported to the grazing grounds of the buffalo in certain places due to new dams erected by beavers, causing the overflow of several streams. This is conclusive evidence that the beaver in the park are increasing.

During the summer of 1929 a new telephone line was constructed from Hay Camp to Pine lake, a distance of $40\frac{1}{2}$ miles. This brings the total mileage in the park up to 143 miles, connecting the superintendent's office at Fort Smith with the wardens' cabins and the cabins with each other. Two new cabins were constructed during the year. One is located on Jackfish river and the other on Nyarling river. A wagon road was completed from Hay Camp to Pine lake. Other roads were under construction throughout the park during the year. Several bridges had to be constructed because of higher water in various streams.

The warden service is equipped with eight portable pumps, each supplied with 2,000 feet of hose for fire-suppression purposes. This equipment is kept in first-class condition and is placed at strategic points throughout the park. At the end of the fiscal year the park service had forty-nine sled-dogs for use in winter patrol.

LANDS AND TIMBER

Disposal of Lands.—Practically the only lands disposed of in the Northwest Territories are lots in the various settlements that have been acquired by Roman Catholic and Anglican missions, fur traders and transportation companies in connection with their several undertakings, and lots for residence purposes and gardens. There are no regulations in force making provision for the acquiring of homesteads as in the Prairie Provinces, but lands suitable for agricultural purposes may be acquired by purchase after being surveyed.

The Northwest Territories Hay and Grazing Regulations make provision for the issuing of permits to cut hay on vacant Crown lands, and for the issuing of grazing leases for a period not exceeding twenty-five years. Temporary use of certain lands may be acquired under a licence of occupation. At the end of the year four grazing leases and five licences of occupation were in good standing. Two lots were reserved at Norman as a site for the erection of a radio station.

Administration of Timber.—Under the Timber Regulations free permits may be granted to educational, religious, and charitable institutions to cut fire-killed or dry timber for fuel purposes, the quantity not to exceed one hundred cords in a permit year. Fixed dues are charged on timber cut for other purposes and the total revenue derived from the disposal of Crown timber as saw-material, building logs, and cordwood during the year was \$3,584.85.

PURCHASE OF REINDEER HERD

In 1919 a Royal Commission was appointed to investigate the possibilities of the reindeer and musk-ox industry in the Arctic and sub-Arctic regions of Canada. In its report, issued in 1922, the commission recommended, among other things, that small experimental reindeer herds be established in a number of localities which might, after departmental investigation, be found suitable for such purpose. Acting on these recommendations, the Dominion Government, through the North West Territories and Yukon Branch of the Department of the

Interior, employed experienced northern botanists to investigate during 1926-27-28 the possibilities of certain areas in Mackenzie District where caribou formerly grazed in large numbers but were no longer to be found.

This investigation indicated that the proposal to establish reindeer herds in the Northwest Territories appeared well advised. The Dominion Government immediately took the necessary steps to acquire an initial herd of animals. By Order in Council of May 1, 1929, the Minister of the Interior was authorized to purchase 3,000 head of reindeer in Alaska, where semi-domesticated reindeer have been bred for many years. Under the terms of a contract which was made subsequently, the vendors agreed to select this number from the largest and most virile animals in their possession, and to deliver them at a location east of the Mackenzie delta. In the fall of 1929, one of the Branch's special investigators, who had made the preliminary field investigations in this connection, was sent to Nome, Alaska, to represent the Department in the selection of the reindeer being purchased. He spent two months on this work and witnessed the start of the "drive" of the animals on their way to Canada. Arrangements for the reception and care of the reindeer on their arrival at the Mackenzie delta were begun before the end of the fiscal year and will proceed during the summer of 1930. The necessary buildings and corrals will be erected and other arrangements made.

TRANSPORTATION

Roads.—As yet the only road in the Northwest Territories on which the Branch has expended monies other than in Wood Buffalo park, is that leading from the settlement of Fort Smith to the steamboat landing at the foot of the river bank. This road, which was very steep and difficult of travel, was improved during the year.

Aids to Navigation.—The district agent at Fort Smith, acting for the Department of Marine and Fisheries, set out buoys as usual in the spring at the mouth of Slave river and on Great Slave lake, and took them up at the close of navigation.

Landing Fields.—Preliminary steps were taken to assist in the preparation of temporary landing places for winter aircraft and for dockage for hydroplanes landing near the principal settlements. The matter of providing permanent landing fields received consideration.

MAIL AND RADIO

Improved Mail Service.—The Post Office Department of Canada maintained the following post offices in Mackenzie District—Fort Smith, Resolution, Hay River, Providence, Simpson, Wrigley, Norman, Good Hope, Arctic Red River, McPherson, and Aklavik. A post office was also maintained at Herschel, Herschel island, Yukon Territory. During the season of open navigation these offices, as far north as Simpson, were provided with a weekly mail service. North of Simpson the summer schedule of 1929 called for seven mails to Wrigley and Norman, six to Good Hope, five to Arctic Red River, McPherson, and Aklavik, and three to Herschel. Arrangements were made by the Post Office Department for the carrying of occasional mails by the Hudson's Bay Company to Rae and Liard. Way sacks for the exchange of mails between intermediate points were provided.

In November, 1929, the Post Office Department inaugurated a winter air mail service to Mackenzie River offices. A flying base was established at McMurray for this work. The announced schedule called for a weekly service between November 26, 1929, and April 8, 1930, to Chipewyan, Fitzgerald, Fort

Smith, and Resolution. Hay River, Providence, and Simpson were to receive six mails and Wrigley, Norman, Good Hope, Arctic Red River, McPherson, Aklavik, and Herschel three mails during this period. Outgoing mail was to be carried on all return trips of the planes.

Radio Stations operated.—The following stations in the Mackenzie-Yukon radio system were operated throughout the year: Edmonton, in Alberta; Fort Smith, Resolution, Simpson, and Aklavik, in Mackenzie District; and Dawson and Mayo, in Yukon. That at Herschel was operated during the summer months.

Inauguration of Weekly Bulletin.—For several years the residents of Mackenzie district have had the great benefit of a system of wireless communication, but it was felt that something more could be done with this equipment. With the co-operation of the Department of National Defence, arrangements were perfected during the past year whereby every day one of the officers of the Department of the Interior at Edmonton prepares a 500-word bulletin of news of special interest to northern residents and this is broadcast to the receiving stations in the North. The bulletins thus received are posted at the local offices of the North West Territories and Yukon Branch where they may be read by everybody. Although in use only a short time, many messages of appreciation of this service have been received from the north country.

EDUCATION

Aid to Mission Schools.—The Department of the Interior has no public school system in Mackenzie District but grants for educational purposes are made to the Anglican and Roman Catholic Churches, both of which maintain day and boarding schools for white and native children in connection with their missions.

Schools Operated by Missions.—The Anglican Church operated during the year, a boarding school for Indian and Eskimo children at Hay River, a day school at Simpson, a day school at McPherson, a day school at Aklavik, and a day school at the mouth of Coppermine river. A boarding school for Eskimo children was established recently at Shingle Point, Yukon Territory, on the Arctic coast.

The Roman Catholic Church operated a day school at Fort Smith, a boarding school for Indian and half-breed children at Resolution, a similar boarding school at Providence, a day school at Simpson, a summer day school at Wrigley, a day school at Good Hope, and a boarding school for Indian and Eskimo children at Aklavik. In addition to these schools, provision was made for the holding of classes for children temporarily gathered in the vicinity of any point where there is a mission.

LAW AND ORDER

Royal Canadian Mounted Police Establishment.—Law and order were efficiently maintained throughout the year by the Royal Canadian Mounted Police. The establishment of this force in the Northwest Territories consists of between eighty-five and ninety officers and men distributed among more than twenty widely separated posts. With a highly organized staff of picked men placed in these strategically located posts, this force was able to cope adequately with the situation. A minimum of crime was reported throughout the year.

Patrols by the Police.—An outstanding feature of the work performed by this force is the patrol system. At convenient times during the year—both

summer and winter—members of the various detachments journey back and forth on long patrols to keep in touch with each other, to exchange mail, and to visit natives, trappers, and traders along the way or in outlying sections of the country assigned to each detachment. In this way a close touch is kept on general conditions and the natives are made to feel that the Government has an interest in their welfare. The reports of many of these long patrols, especially those made by dog-team during the depth of winter, involving hundreds of miles of travel across unexplored areas, make most absorbing reading and are of great value in adding to the general knowledge of the country.

The most outstanding patrol of the past year was that made in the Arctic archipelago by Inspector A. H. Joy. On March 12, 1929, Inspector Joy left detachment headquarters at Dundas Harbour on the south coast of Devon island with Constable Taggart and one Eskimo and two dog-teams as his main support, and Constable Hamilton and another Eskimo with a third dog-team as reinforcements for a few days. On May 31 he arrived at Bache Peninsula detachment headquarters on the east coast of Ellesmere island, after having made a successful patrol of over 1,700 miles in 81 days that took his little party by a circuitous route over a vast area of the northerly part of the Canadian Arctic archipelago. On this patrol Inspector Joy made many side excursions to examine interior parts of the islands visited, in some instances erecting cairns to mark his visits.

Court Proceedings.—During the summer of 1929, Hon. Lucien Dubuc of Edmonton, Stipendiary Magistrate for the Northwest Territories, journeyed down the Mackenzie river with a full court and at the principal posts disposed of the docket of cases awaiting trial.

Appointments.—The following official appointments were made during the year: four coroners (including Dr. R. D. Martin at Coppermine and Dr. H. A. Stuart at Pangnirtung), ten notaries public (reappointed), four justices of the peace, and twenty-five commissioners for taking affidavits.

YUKON

YUKON COUNCIL

Personnel of Council.—The members of Council who were elected on August 29, 1928, for a three-year term are: W. L. Phelps, Whitehorse District; Frank Carscallen, Mayo District; and A. T. Taddie, Dawson District.

Session of Council.—The Yukon Council was in session from June 4 to June 12, 1929. There were some amendments made to existing ordinances, and ordinances were passed providing for the payment of a bounty on wolves and coyotes, and also to regulate the hours of labour in placer mining operations.

Under the ordinance to provide for the payment of bounty on wolves and coyotes the sum of \$2,125.05 was expended. This small amount was due to the fact that it was not possible to have information as to the payment of a bounty transmitted to outlying districts in time for the payment of such bounty during the year; and further many pelts have been shipped outside by the trappers themselves. It is anticipated, however, that a considerable increase will be noted in the coming year.

LANDS AND TIMBER

Land Administration.—The revenue collected from Dominion lands in the form of rentals, and office, homestead entry, and hay permit fees, amounted to \$3,297.58. There were no sales of land. Land rentals accounted for \$3,268.58; office fees for \$16.50; homestead entry, \$10; and hay permits, \$2.50.

Timber Administration.—The kinds and quantities of the various classes of timber cut were as follows: saw-timber, on which dues were paid, cut under permit 105,908 feet board measure; fuel-wood cut under authority of permit 14,560 cords; fuel-wood cut without authority of permit and on which seizure dues were paid, 54 cords; logs cut without authority of permit, 384 linear feet; fuel-wood cut on timber berths on which dues were paid, 1,377 $\frac{3}{4}$ cords.

The total revenue derived from Crown timber amounted to \$7,807.38; made up of royalty, \$688.90; permits, \$7,056.80; and seizure dues, \$61.68.

AGRICULTURE

The season was favourable for crops with abundant moisture, which resulted in well matured crops of an excellent quality.

BIG GAME

Big game was reported as being very plentiful. There were several parties of big game hunters in the Territory last year, and they were very enthusiastic with the results of their hunt.

PUBLIC WELFARE

Hospitals and Public Health.—The hospitals at Whitehorse, Dawson, and Mayo were maintained in their usual state of efficiency and the health of the residents of the Territory has been excellent.

Education.—The number of pupils in the different schools remained at about the same level as last year. Public and high schools were maintained at Dawson, Whitehorse, Mayo, and Keno, and assisted schools at Carcross and Tagish.

Law and Order.—Law and order were well maintained throughout the Territory by the Royal Canadian Mounted Police, and frequent patrols have been made to the outlying districts.

TRANSPORTATION AND COMMUNICATION

Railway and Steamboat Service.—The White Pass and Yukon Railway was operated throughout the year between tidewater as Skagway, Alaska, and the head of navigation on the Yukon river at Whitehorse, Yukon. Steamboats were operated between Whitehorse and Dawson, Dawson and Mayo, and Dawson and lower river points during the open season.

Tourist Traffic.—The number of tourists visiting Dawson during the season of navigation on the Yukon river and especially during the months of July and August was greater than during any previous year. The popularity of the Yukon trip is steadily increasing. Many tourists went as far north as Carcross and then turned aside to visit Atlin in northern British Columbia. Big game hunters were as active as ever in the Kluane, MacMillan and other favourite regions.

Aviation and Landing Fields.—The use of aircraft as a means of rapid transport and for carrying mails has increased greatly. Landing fields for aeroplanes have been prepared at Whitehorse, Dawson, Mayo, and Keno, also an emergency field at Minto, which was constructed by the Treadwell Yukon Company.

In winter, planes land on the frozen surface of the rivers in front of Dawson, Mayo, and Whitehorse, as this plan is more convenient to the settlements and the ice makes a better field for winter use than the land. It is also possible to land at Dawson, Mayo, and Carcross in the summer with pontoons, as there is

sufficient depth of practically still water to make successful landings. The landing field at Dawson is situated at the mouth of Bonanza creek on mining ground leased by the Yukon Consolidated Gold Corporation, Limited.

Roads, Bridges, and Public Works.—The roads in the Territory were maintained in as fair a condition as possible consistent with the amount of money available for such work.

Last year a steel bridge for erection across the Mayo river at Minto bridge, to replace the old wooden structure, was ordered from Vancouver and transported to the mouth of the Stewart river. It is the intention to have the bridge material transferred to Mayo at the opening of navigation and, if possible, arrangements will be made for its construction during the coming season. On account of the very heavy tonnage of ore which passes over the present wooden bridge, it is considered advisable to replace it with the new structure as soon as funds are available.

Mails, Telegraphs, and Radio.—The usual mail service was continued throughout the year. The old Hazelton-Dawson land telegraph line was in operation, and radio stations were operated at Dawson and Mayo throughout the year, and at Herschel during the summer season.

VII

SURVEYS BUREAU

REPORT OF THE DIRECTOR GENERAL OF SURVEYS, J. D. CRAIG

The Surveys Bureau comprises the following branches or divisions engaged in surveys or related work, namely:—

Geodetic Survey of Canada.

Topographical Survey.

International Boundary Commission (Canadian Section).

Aerial Surveys.

Town Planning.

The Director General of Surveys is the head of the Surveys Bureau and is also International Boundary Commissioner representing Canada. In addition, he acts as Chairman of the Geographic Board whose function it is to decide upon place-names in the Dominion submitted for approval by any of the federal departments or by the provincial authorities.

The Geodetic Survey continued the general scheme of triangulation and levelling which will ultimately cover the whole country, and lead to the establishment in every locality of one or more selected stations whose geographic position (latitude and longitude) and elevation above sea-level are known to the highest degree of accuracy. Such points when permanently marked provide control for mapping and engineering operations of federal and provincial departments, municipalities, corporations, and private persons. The employment of aeroplanes for reconnaissance and the transportation of parties in the newer portions of the country has proven most advantageous, and has resulted in the speeding up of the work. Nine volumes were issued containing the results of the levelling operations of the Survey throughout the country, and in addition some geodetic research work was done and valuable data were recorded in connection with the investigation of isostasy.

The field work of the Topographical Survey included control surveys, aerial surveys, ground surveys for topographical mapping, legal surveys, land classification work, interprovincial boundary surveys, and surveys for determining magnetic declination. Eighteen parties were employed and in addition three engineers acted as navigation officers with the Royal Canadian Air Force planes engaged in taking aerial photographs. New map sheets were issued covering 106,302 square miles, of which 71,898 square miles were covered by map sheets of the National Topographic Series. The Physical Testing Laboratory continued the testing, adjustment, and certification of various scientific instruments, more than half its operations being conducted on behalf of other departments and organizations. It is interesting to note that a one-metre nickel rule formerly in possession of the laboratory has now been adopted by Order in Council as the legal metre for Canada.

The International Boundary Commission, Canadian Section, under a co-operative arrangement with the United States Section, undertook to reopen the vista and repair the monuments on a section of the Quebec-Maine boundary. The boundary was also marked in a suitable way on a number of international highways, bridges, and tunnels. Fourteen boundary map sheets were issued and signed by the Commissioners.

The Aerial Surveys Division, organized about a year ago, assists in carrying out the program as approved by the Departmental Aerial Committee and thus forms the point of contact with the Air Force. Another important function of this division is the initiation of experimental work looking to the extension of aerial surveying into new fields of usefulness.

The Town Planning Division functions as the central educational agency for the promotion of town-planning practice throughout the Dominion. During the year a large number of articles have been contributed to the *Town Planning Journal*, many of which have been copied for editorial use by the newspapers of the country. A large correspondence is maintained with those centres where town planning is in progress or in the initial stages, and suitable literature is supplied for guidance as to procedure. The annual convention of the town-planning fraternity is largely dependent upon the division for organization, and an officer of the division attended the Winnipeg convention last year and took a prominent part in the transactions.

A brief summary of the work of the chief divisions of the Bureau, as listed above, follows. Detailed reports covering the activities of the Geodetic Survey and the Topographical Survey are issued as separate publications, and there is also available a separate report of the work of the Surveys Bureau as a whole.

GEODETIC SURVEY

The Geodetic Survey of Canada determined with the highest attainable accuracy the geographical positions of an increased number of geodetic stations in Canada required as basic control for Canadian mapping operations, and established the precise elevations of bench-marks above mean sea-level at points distributed over an increased mileage along Canadian railway tracks and highways, thus providing control datums for the mapping and engineering operations of federal and provincial departments, municipalities, corporations, and private persons.

Triangulation nets and precise traverses of first-order and second-order of accuracy were extended and base lines for length control in triangulation were measured with first-order accuracy. Laplace stations combining observations for latitude, longitude, and azimuth were established. The precise traverse and base line tapes were standardized. Geodetic research was carried on, and data of value in the investigation of isostasy were obtained. Geodetic results were printed and distributed, and material was prepared for presentation at the Fourth General Conference of the International Geodetic and Geophysical Union meeting at Stockholm, in 1930.

Triangulation and Precise Traverse.—The western and northern portions of the triangulation and precise traverse control loop in British Columbia, which comprises 1,150 miles of first-order triangulation and 200 miles of first-order traverse through the interior of British Columbia, were completed. The uncompleted portion of this control loop follows the Fraser River valley.

In Saskatchewan first-order triangulation in the area from Lloydminster to Prince Albert, and reconnaissance south from Prince Albert to the international boundary were completed. Stations were selected for an extension from the main net at Prince Albert for control in the Prince Albert National Park area.

In Ontario first-order triangulation was completed from North Bay to Sudbury, and a first-order traverse was extended northerly from Cochrane.

In Quebec the aeroplane reconnaissance carried out in 1928-29 between Senneterre and La Tuque was checked by ground methods. Reconnaissance was completed by aeroplane for a net from Oskelaneo one hundred miles towards lake Chibougamau. The first-order triangulation northward from

Ottawa was extended along the Gatineau valley. The advantages to be gained by the use of the aeroplane for reconnaissance observations, and for the transportation of parties and their equipment, have been demonstrated.

In the Maritime Provinces a triangulation through the western portion of New Brunswick was completed. The elevations of a number of the most prominent hills in New Brunswick were determined by trigonometric levelling.

Levelling.—Field parties of the Levelling Division operated in five of the provinces—a precise levelling party in British Columbia, a secondary levelling party in Quebec, one party of each kind in the province of Ontario and, in addition to these four regular parties, a special party engaged in the establishment of fundamental bench-marks in certain cities and towns in the provinces of Manitoba and Saskatchewan.

The British Columbia party established precise level bench-marks along the Cariboo road between Quesnel and Prince George, and, later on, ran north-erly from Victoria along the Esquimalt and Nanaimo railway. The Quebec party was occupied in the Saguenay and Lake St. John areas. One of the Ontario parties worked in the Rouyn district—between Swastika, Ontario, and Taschereau, Quebec—and then carried levels some sixty-five miles north of Cochrane along the recently constructed extension of the Timiskaming and Northern Ontario railway. While a small portion of this party's work lay within the province of Quebec, the other party spent the whole season in Ontario, completing the levelling along the Pembroke-North Bay highway westerly from Deux Rivières—the point at which the previous season's levelling had been discontinued—and then proceeding to the Parry Sound district, where the remainder of the season was spent. A line of levels was completed from North Bay to Parry Sound and continued southeasterly, for some distance, towards Bracebridge.

During the past twelve months there have been released to the public nine publications comprising a complete revision of the precise levelling in the Dominion as carried on by the Geodetic Survey since its inception. These publications cover precise levelling in the Maritime Provinces, Quebec South, Quebec North, Ontario South, Ontario North, Manitoba, Saskatchewan, Alberta, and British Columbia. This is the first time that the precise levelling information based on one datum extending from the Atlantic to the Pacific seaboard has been published. In order to accomplish this, it has been necessary, for several seasons past, to do considerable revision of level lines in the field and to carry out a complete inspection of bench-marks. The publications have been issued in dictionary form in which the bench-marks are listed under the names of the nearest railway stations arranged alphabetically.

Triangulation Adjustment.—Geodetic survey data as requested by federal and provincial bureaus, and by the engineering public have been furnished. A report on triangulation in the Bay of Fundy area with an extension from Truro to Halifax, thence to Liverpool, Nova Scotia, has been printed and distributed.

Precise Levelling Adjustment.—A publication *Adjustment of the Precise Level Net of Canada, 1928* was issued. This publication described the net in general, the orthometric and other corrections necessary to field work, and the methods of adjustment employed; it also gave the resulting elevations. This adjustment was based on tidal stations on the Atlantic and Pacific coasts and a temporarily-adopted elevation for Rouses Point on the boundary between the United States and Canada. A new adjustment was made later, omitting the Rouses Point datum, and elevations were obtained for all points in the Canadian net based on Canadian tidal values only.

Laplace Observations.—Observations for the determination of latitude and longitude were made at a number of stations in the triangulation of the Northern Ontario-Quebec area, the Gaspé Peninsula and Chaleur Bay areas, along the west shore of Hudson bay and on the Ontario-Manitoba boundary. A publication entitled *Deflection of the Plumb Line in Canada* was prepared for the printer.

Base Lines.—First-order base lines were measured near Kitscoty, Alberta, and at Kinistino, Saskatchewan, to provide length control in the Alberta-Saskatchewan triangulation.

Standards.—The fifty-metre invar tapes, used both in base-line measurement and in precise traverse, were standardized before and after their field use in 1929.

Isostasy.—As a result of observations in Gaspé peninsula, valuable data were recorded in connection with the investigation of isostasy. The Survey has been able to devote only a limited amount of time to this work.

Geodetic Research.—On account of the vast area of Canada, many problems in geodesy have arisen. Among these is the problem of determining the geodetic position of a point from a point the position of which is already known when the line between the two points is very long (say over one hundred miles). This problem has been satisfactorily solved and will have many applications in practical geodesy.

The treatise, *The Simultaneous Adjustment of Precise Traverse and Triangulation*, has recently appeared in printed form and is now ready for distribution. This treatise was prepared primarily to take care of the joined systems of triangulation and precise traverse control in the provinces of Ontario and British Columbia.

TOPOGRAPHICAL SURVEY

Canada is still undergoing a process of development. Great national problems have to be faced such as the extension of our railway systems to the north, the utilization of our water-powers and the development of our great transportation waterways. The provinces, the counties, the municipalities, the cities, all in their respective spheres, have similar problems to be worked out consequent upon their growth and development. In the intimate study of such problems, which constantly confront our administrators, more and better information is needed than can be shown upon geographical or general maps. This need is met by what are known as topographical maps. Such maps have many uses and serve as a base on which most problems affecting human activities may be studied and investigated, and plans made for their solution.

The production of these topographical maps in an orderly and systematic way for a new country of the size of Canada, is an immense undertaking. With much of the immediate development taking place in forest-covered regions lying back from present settlement, regions where ground access is particularly onerous, special difficulties are to be encountered and must be surmounted.

It is here that the new science of mapping by the use of aerial photographs has proved its value and is fitting so well into Canada's necessities. It is a science of which Canadians may well be proud. For in Canada this science has received its greatest impetus and its greatest application toward the solution of national problems. Methods devised by the Topographical Survey and improved by them have been made use of in other parts of the world, where similar mapping problems have presented themselves. In the aerial mapping operations the aerial photographs are taken through the co-operation of the Royal Canadian Air Force of the Department of National Defence.

In the making of maps, of course, certain ground surveys are required in order to co-ordinate the air and surface operations. In this connection, the methods of mapping as carried on at present in the Topographical Survey have been largely reorganized of late years to take into account the requirements of the new science. In all the field operations it may be stated that the ultimate aim of producing a national topographic map of the entire Dominion is kept well in mind. Although certain classes of surveys may be carried on primarily for purposes which may seem far removed from such a program, they all contribute to this national undertaking.

Field operations were carried on during the year in all the provinces, in the Yukon Territory and in the Northwest Territories. In the prosecution of these field operations eighteen separate parties were employed and, in addition, three surveys engineers acted throughout the season as navigation officers with the planes of the Royal Canadian Air Force engaged in taking photographs for aerial mapping operations. Co-operation was also maintained with the provincial authorities in carrying on the work and in gathering topographic data for presentation upon the map sheets.

The area covered during the year by newly-issued topographical map sheets was 106,302 square miles. Of this amount, 71,898 square miles were covered by map sheets of the National Topographic series—standard, provisional, and exploratory editions—and the remainder by sheets of the Sectional Map series and in a few cases by other map sheets designed to meet special needs.

FIELD WORK

The field work of the Topographical Survey as performed during the fiscal year may be classified under the headings of control surveys, aerial surveys, ground topographical mapping (including photo-topographical mapping), legal surveys, land classification work, interprovincial boundary surveys, and precise declination surveys.

Control surveys are those which are made for the purpose of rectifying or correlating all other survey work of a less precise nature. In Canada, all primary control, both horizontal and vertical, is the particular function of the Geodetic Survey of Canada, to which all secondary control surveys are adjusted. One of the principal functions of the Topographical Survey is to provide mapping control for the topographical maps of Canada. Such mapping control surveys include triangulation, chained traverses, stadia traverses, and the determination of latitude and longitude values by astronomical observation. All of these are tied in and adjusted to points of the Geodetic Survey, wherever such exist, and form the basis on which all detailed topographical surveys are plotted. To-day most of the detailed topography is plotted from aerial photographs on which points established by control surveys have been identified. Control for new topographical mapping during the year comprised 884 miles of precise chained traverse, 935 miles of stadia traverse, the establishment of geographic positions by astronomical observations at eleven different points, and some triangulation.

Aerial surveys comprise the taking of aerial photographs, whether oblique or vertical, in co-operation with the Royal Canadian Air Force. During the year 48,025 square miles were covered by oblique and 26,230 square miles by vertical photographs. Ground topographical mapping includes the obtaining of topographic detail by the use of the plane-table, by the interpretation of aerial photographs, and also by photo-topographic and other methods. A total of 9,502 square miles was so covered. Legal surveys are carried on for defining boundaries for the administration of lands. Although such surveys extended into six of the provinces, and into the Yukon and Northwest Territories, the greater portion of the work during the past year was in the three Prairie Prov-

inces. Land classification surveys deal with the obtaining of particularized topographical information specifically relating to possibilities for settlement. In the work for the past season this was rather of a reconnaissance nature and had for its immediate object the determination of the advisability or otherwise of subdividing certain lands. Over 800 square miles were so investigated. The interprovincial boundary surveys refer in this report to the delimitation of a portion of the Manitoba-Ontario boundary; and the precise declination surveys include the taking of observations for the declination, or "variation", of the magnetic compass needle, and in a few cases for its declination and horizontal force component.

The following is a brief summary of some of the more outstanding items of the field work, given by provinces, excepting for the precise declination surveys which are treated separately.

Nova Scotia.—For control in later topographic mapping 148 miles of chain traverse (including some retracements of previous work) and 96 miles of spirit levelling were run, and 27 monuments were established on the ground. The interpretation of aerial photographs over portions of the southern tip of the peninsula comprising 2,140 square miles was completed, and 970 square miles were covered by vertical aerial photographs.

New Brunswick.—For control 290 miles of chain traverse and 310 miles of spirit levelling were run, and 72 monuments were established on the ground. The plane-table survey was completed for the Moncton two-mile sheet of the National Topographic Series which extends also into Prince Edward Island, and a field interpretation of aerial photographs made for another two-mile sheet lying to the west, a total of 1,880 square miles being so covered. Vertical aerial photographs were taken over an area of 1,125 square miles.

Prince Edward Island.—A special plane-table survey was undertaken in the vicinity of Malpeque bay for the production of map sheets, relating to the administration by the Department of Fisheries, of oyster beds in that vicinity. In connection with this work there was a total of 10 miles of chained traverse and 15 miles of spirit levels run, 65 monuments established, a small base measured, and 142 transit stations occupied for triangulation purposes. Other plane-table work related to the completion of the Moncton two-mile sheet referred to above. New mapping comprised 112 square miles.

Quebec.—For control 368 miles of chained traverse, 277 miles of spirit levels, and 32 miles of stadia levels were run, and 78 monuments were established. Latitude and longitude observations were made at 10 different stations. About 625 square miles of new mapping was done with plane-table supplemented by vertical aerial photographs. Some 8,860 square miles of new territory were covered by vertical aerial photographs. One historic site was surveyed.

Ontario.—For control 76 miles of chained traverse and 270 miles of spirit levels were run, 19 monuments were established, and observations for latitude and longitude were taken at one station. New mapping entailing the field interpretation of aerial photographs over 2,905 square miles in the Parry Sound-North Bay region was undertaken. Vertical aerial photographs over 4,780 square miles and oblique aerial photographs over 19,825 square miles of new territory were taken. In connection with the mapping work in Ontario the active participation begun three years ago by the province, in the national mapping program, has been continued with very satisfactory results. The control provided by field parties of the provincial Department of Surveys is an outstanding factor in the preparation of the map sheets issued in the province. Preliminary work was completed for the delimitation of that portion of the Ontario-Manitoba boundary extending from its point of intersection with the 12th base

line of the Dominion Lands system of survey to the east end of Island lake. This consisted of the running of a trial line over the portion covered, the final delimitation to be effected later. One historic site was laid out.

Manitoba.—Special work in the province of Manitoba consisted of the topographical mapping of 700 square miles in the Roseau River basin, adjoining the international boundary. This survey was required for the intensive study of certain problems of an international nature relating to the district. In carrying out this work 960 miles of spirit levels were run, 80 square miles of plane-table work undertaken, and 47 rock posts established in connection with vertical control. Vertical aerial photographs over 4,265 square miles and oblique aerial photographs over 14,700 square miles were taken. Miscellaneous legal surveys were performed in eleven different townships and, in addition, Indian reserves were surveyed at two different localities. The work in connection with the delimitation of the Ontario-Manitoba boundary is mentioned above under Ontario.

Saskatchewan.—For control purposes 585 miles of stadia traverses were run, astronomical observations for latitude and longitude were taken at three stations, and 61 monuments were established on the ground. Vertical aerial photographs over 355 square miles and oblique aerial photographs over 13,500 square miles were taken. Miscellaneous legal surveys were performed in 17 different townships and in one Indian Reserve. Some 64,000 acres of land lying east of Cold lake were covered by land classification surveys.

Alberta.—Subdivision of lands for settlement was carried on in a number of townships in the Peace River district. The territory subdivided was largely determined as a result of land classification surveys, some 453,760 acres being so classified during the year of which 151,200 acres were subsequently subdivided. Other miscellaneous legal surveys were carried on in 14 other localities by officers of the Topographical Survey.

British Columbia.—For control purposes 350 miles of stadia traverse were run, along which also stadia levels were taken. Co-operation was maintained with the provincial Government in the survey of the Pacific Great Eastern Railway Block north of Prince George. Vertical aerial photographs were taken over about 5,000 square miles of this area, which with other areas so covered make up a total of 5,875 square miles. Some 1,140 square miles were covered by ground-mapping—largely photo-topographic—methods. A survey of certain Indian reserves was made in the Railway Belt.

Yukon Territory.—A survey of 40 miles of road from Mayo to Dawson was made under contract, the engineer in charge not being a member of the staff.

Northwest Territories.—Miscellaneous legal surveys were carried on by an officer of the Survey at various settlements along the Mackenzie River system from Fort Smith to Aklavik. Under instructions from the Survey, a Dominion Land surveyor on the staff of the North West Territories and Yukon Branch made a survey of some group lots on Charlton island in James bay.

Precise Declination Surveys.—During the year the Topographical Survey made some 1,600 precise measurements of the true direction of the compass needle in Canada in conjunction with its other work, bringing the total number to 26,000. These observations were begun in 1880 and are taken at very little expense as such measurements require but a few minutes of time when the surveyors are already on the ground with their surveying instruments and have data available regarding azimuth. Since the needle of the magnetic compass does not point true north but more or less to the east or west at different

places, this work is of great practical value in a large, new country such as Canada for surveyors, airmen, navigators, explorers, miners, prospectors, timber cruisers, settlers, foresters, and hunters. The work was carried on in close co-operation with the Meteorological Service of Canada, the Dominion Observatory, the Ontario Department of Surveys, the North West Territories and Yukon Branch of the Department of the Interior, and various provincial governments and surveyors. During the 1929 season, the Ontario Department of Surveys made about 200 such measurements and the North West Territories and Yukon Branch about 400. The information is published in the form of declination charts on the map sheets of the National Topographic series and the Sectional Map series, in order that it may be shown in the most readily accessible and convenient form for compass users. Every five years it is published in the form of a magnetic declination chart of Canada.

PRODUCTION OF MAPS

All survey returns after being compiled into a form suitable for the preparation of maps, are drafted, photographed, and printed in colours on lithographic presses in quantities sufficient for distribution. Advance copies or copies on a definite scale for plotting are made in the form of photographic prints. Other work in this connection entailing the use of the photographic equipment, is done as required. Maps of important urban areas or of areas of special interest are built up in relief.

Editions of 71 maps and 50 editions of township and townsite plans were printed and 31 relief maps were made. Included in this list were 12 map sheets of the National Topographic series.

PHYSICAL TESTING LABORATORY

At the request of the Commissioner of Customs the laboratory undertook the determination of some refractive indices of samples of ethyl and methyl alcohols. The work extended over a considerable period and involved a large number of observations. It is proposed to utilize the results in the analytical work of the Customs and Excise Laboratory. Further investigations are planned to include observations with isopropyl alcohol, now being employed in cheap perfumes, etc.

The one-metre nickel rule of the Laboratory, No. 306, has been formally adopted by Order in Council as the Dominion Standard for the International Metre, in accordance with the provisions of the *Weights and Measures Act*. This rule is a high grade precision standard, and having been compared three times directly with the International Standard measures at Sevres (the last occasion being during the year under review), it is suited in every way to be the legal reference standard of the Dominion.

During the year the laboratory certified 503 hydrometers, the majority of these being for the Department of National Revenue.

A bulletin has been prepared describing the characteristics, adjustment, use, and testing of aneroid barometers and altimeters.

As in former years assistance has been rendered to many different organizations, considerably more than one-half the work of the Laboratory being conducted on behalf of other Government departments or on behalf of external organizations, on a repayment basis.

REGISTRATION, RECORDS, AND DISTRIBUTION

Survey returns received for examination—from surveyors in the field, railway companies, and provincial governments—and entered in the different registers and plotted in the various index maps, comprise 513 books of field notes,

525 plans, and 1,403 miscellaneous returns. During the year, 339 new books and 613 new plans were placed on record, the total number on official record now being 20,813 books and 37,075 plans.

There were distributed 68,819 copies of the various maps of the Topographical Survey, 6,026 publications, and 13,360 official plans of townships, townsites, etc.

INTERNATIONAL BOUNDARY COMMISSION—CANADIAN SECTION

It was with great regret that the commission learned of the untimely death on April 9, 1929, of the United States Commissioner, the late Colonel E. Lester Jones. While Colonel Jones had not been in good health for some time previous, his sudden end was quite unexpected and was a distinct shock. Mr. Jas. H. Van Wagenen, formerly engineer to the United States section of the commission, was appointed commissioner by President Hoover on May 3, to succeed the late Colonel Jones.

A conference between the Canadian commissioner and the engineer to the United States section of the commission was held in Washington in April, 1929, when a division of the field work to be done during the following summer was agreed upon. A second conference was held in Ottawa in November, 1929, when details concerning the completion of the joint reports required by the treaty of 1908 were discussed.

As a result of the first conference, above referred to, the United States section undertook the following work: to erect monuments of a special type to mark the points where the boundary is crossed by recently constructed highways, at Emerson, Manitoba; and Wild Horse, Alberta; with the co-operation of an engineer from the Canadian section of the commission, to locate and mark the international boundary in the international tunnels at Sarnia and Windsor, and on the Ambassador international bridge between Detroit and Sandwich; to mark the boundary on the bridges across the Niagara river, where the locations had already been made in 1927; to repair certain monuments on the Quebec-Vermont boundary and on the St. John river; and to locate and mark the boundary on the international bridges across that river.

The Canadian section undertook to complete the reopening of the boundary vista and the repairing of the monuments on the southwest and south lines of the Quebec-Maine boundary.

Due largely to unusually favourable weather the Canadian party on the Quebec-Maine boundary was able to complete this work by the end of August.

In addition to the above the Department of Marine and Fisheries on behalf of the commission installed lights on the boundary range marks at Point Roberts. These marks range the first course of the boundary in the strait of Georgia and were erected in 1928, in the interests of the fishing industries of both countries.

In July, 1929, a conference was held in Ottawa between members of the staffs of the two sections of the commission. At this meeting certain final details for the joint report on the Ontario-Minnesota section of the boundary were decided upon and a division of the work of computation for the joint report on the 49th parallel boundary was made.

Copy for the report on the Ontario-Minnesota section of the boundary was put into the hands of the printers.

During the year fourteen boundary maps were printed and signed by the commissioners.

Survey data, photographs, maps and other information regarding the boundary were supplied to the Topographical Survey, the Geodetic Survey, the Geological Survey, the Natural Resources Intelligence Service, the Department of

State for External Affairs, the Department of National Revenue, the Department of Public Works, the Railway Commission; various departments of the provinces of New Brunswick, Ontario, and British Columbia; the War Office, London; and to a large number of hydro-electric and mining corporations, engineers, publicists, and private persons.

The office work of the staff during the year has been largely devoted to supplying the information above mentioned, to adjusting survey data, computing geographic positions, making triangulation sketches, and doing other related work in preparation of a joint report on the 49th parallel section of the boundary. Work was also done in completing the maps of the Ontario-Minnesota section of the boundary.

AERIAL SURVEYS DIVISION

The Aerial Surveys Division of the Surveys Bureau was organized a little over a year ago to assist the Director General in carrying out the departmental air program as approved by the Departmental Air Committee and Sub-Committee. Aerial photography and surveying have changed radically in their character during the last few years. During the early stages of the work attention was chiefly concentrated on working out efficient methods of aerial mapping. This phase of aerial surveying has since been placed on a production basis. At the same time a wide field in the application of aerial photography and aerial surveying to engineering problems, to the study of water-powers, forestry, geology, and to geodetic reconnaissance has been opened up. The Aerial Division of the Surveys Bureau gives special attention to these new developments and provides an experienced staff whose services are available to all interested branches and departments.

The work of the Aerial Surveys Division, therefore, included in the first instance, the administrative work in connection with allocation of aircraft and equipment, the preparation, checking, and amending of instructions for photographic operations, the receipt, inspection and transmission of aerial photographic prints and, in general, keeping in constant contact with the various branches and departments using aerial surveys on the one hand and with the Air Force on the other, to insure that the available equipment is used to the best advantage and that it is fairly distributed among the various organizations. These duties require not only constant care and attention but a broad view of the whole aerial situation as it develops during the season. The Aerial Division is in fact the chief point of contact between the Civil Air Force and all the various organizations which it serves in this field.

On the technical side of the work, the services of the staff are always available to advise and assist the different branches and departments in the utilization of aerial methods to meet their particular requirements. During the past year several major developments in aerial surveying have been originated by this division. These include the application of aerial methods to geodetic transportation and reconnaissance, a development which is of the greatest value in extending and speeding up geodetic operations. Experiments in connection with the national inventory of forest resources are now under way which promise to be an important factor in that great undertaking. A third new field of operation, also in course of development is the use of aerial photographs for hydrographic surveying, experimental work for which is now being undertaken in co-operation with the Hydrographic Survey.

In addition to work in connection with other departments there are numerous calls and requests from corporations and private individuals who look to this office for advice in connection with aerial work. In this connection several articles and addresses were prepared for presentation to the Engineering Institute, and other organizations.

DOMINION OF CANADA

REPORT OF THE DEPARTMENT

OF

IMMIGRATION AND COLONIZATION

FOR THE

FISCAL YEAR ENDED MARCH 31, 1930

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1931

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I.,
G.C.M.G., G.C.I.E., G.B.E., Governor General and Commander in Chief
of the Dominion of Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

The undersigned has the honour to lay before Your Excellency the report of the transactions of the Department of Immigration and Colonization for the fiscal year ended March 31, 1930.

Respectfully submitted,

CHARLES STEWART,
Acting Minister of Immigration and Colonization.

REPORT

OF THE

DEPARTMENT OF IMMIGRATION AND COLONIZATION

1929-30

DEPUTY MINISTER, W. J. EGAN

The report for the fiscal year 1929-30 is the thirteenth annual report to be presented since the department was organized. An effort is made to present from year to year in the statistical tables, a picture of immigration as it can be told by statistics. Attention has been called in former reports to the difficulties of comparison between pre-war and post-war immigration owing to changes in the nationalities of so many Europeans as the result of the war. In pre-war years more attention was paid to nationality, but in the post-war period stress has been placed rather upon racial origin.

Included in the report will be found individual reports of various branches of the department. A survey of work in the British Isles, on the Continent of Europe and in the United States, will be found in the reports of the Commissioner of Colonization, the Director of Publicity and the Director of European Emigration for Canada in London, England. The report of the Commissioner of Immigration presents some interesting facts regarding immigration inspection and deportation. There are also separate reports dealing with the work of the Women's Branch and with the immigration of juveniles.

In last year's report a reference was made to changing conditions in Canada and the effect of these in lessening the demand for immigrant labour. These changes continue from year to year especially in the direction of the displacement of labour by labour-saving machinery. Harvester excursions from Eastern to Western Canada which have been an annual feature of the western harvest for many years, have now practically ceased. The explanation of this is due to two facts, (a) the growth of centres of population in Western Canada from which harvest help can be drawn, and (b) the introduction of the harvester-combine and other agricultural power machinery. It is estimated that during the past three or four years the number of harvester-combines brought into use, has been sufficient to displace more than 30,000 harvesters.

As the year closes it becomes increasingly evident that Canada will not require as large an immigration of labourers as have come in during the past few years and steps have already been taken to curtail the movement of that class from Europe and also to ensure that the labourers brought in during 1930 will come as far as possible in the early spring months.

The incoming mail during the year numbered 482,333 pieces and outgoing mail, not including literature or other publicity matter, 561,754.

The annual report of the department does not contain the record of the colonization work done by the Land Settlement Branch, particulars of that work will be found in the annual reports issued by the Soldier Settlement Board.

A movement not included in the immigration figures is that of returned Canadians. This information was collected and tabulated first in the fiscal year 1924-25. The movement year by year since April 1st, 1924, is as shown in the following table. It includes only those Canadian citizens who left Canada to reside in the United States and who on returning to Canada declared their intention of resuming their residence in Canada. Those who left Canada on visits have not been included in this summary. It will be observed that Cana-

IMMIGRATION AND COLONIZATION

dian citizens are divided into three classes, (a) those born in Canada, (b) British born who acquired Canadian domicile, and (c) alien born people who secured naturalization in Canada.
